Barbie cooking games cake shop free online

We've all seen it. The mother walks around the store with her young children. It would seem that everyone is happy and smiling. Then it happens. One child asks for something, and the mother says no. His eyes are good with tears, the little body is tense, and then he's on the ground, kicking and screaming with all his might. Hysterics hit the fan. Dragging a bored kid around the store is no fun for all the parties involved. But you have to get your shopping done, and if you don't have childcare lined up, your kids will have to tag along. The key to avoiding a big breakup is to keep them entertained, and if they learn something in the process, that's a big bonus. Here are five fun shopping games that are sure to do the trick. Content advertising Grocery supermarket ABCs Sweep Scavenger Hunt Find 100 I Spy Most people know it has an alphabetical game, age staple for long car trips, but it can also work in a grocery store or farmers market. It's simple: start with the letter A and name something in the store that starts with A. Go through the alphabet to call items that can be found on the shelves. Bonus points for pointing out unusual items your kids may not know about and for being interested in new foods. Advertising This is a good game to play with older children who are starting to learn about the money and value of things. Just like the game show, pick up an item and ask them to guess how much it costs. Once they're guessing the price, let them find out what dollars and changes they'll need to use to pay for it. If you really want them to get interested, let them play for small prizes like something from pass to game or their favorite candy. Advertising Any shopping for food, clothing or supplies, everyone loves a good hunt and your kids are probably indistinguishable. If your kids are old enough to go shopping by themselves and then send them hunting for a child to find items. If they're still a little too young, they've split into teams with one team going with dad and the other sticking close to mom. This will keep them entertained throughout time, but it pulls double duty as a way to cut down on shopping trips, too. With all the cleavage list, you'll be finished shopping at any time. Advertising This game can be as simple or challenging as your kids can handle. You'll select an item or attribute of an item, and ask your kids to find 100 of them (or how much you like depending on how long you'll be in the store). If your children are young, then look for simple characteristics, such as shapes, colors or patterns. For example, let them find on the package 100 items in red letters. If your kids are a little older, make it a little harder by throwing some maths out there too. Let them 100 items, with 25 percent of them containing natural ingredients, 25 percent images of the sun on the packaging and 50 percent containing chicken in the ingredients. Of course, what you have they are looking completely up to you. Advertising I Spy is a great game to keep younger kids entertained by allowing them to work on their letters, numbers, shapes and colors. If you're one of the few people in the world who's never heard of I'm a Spy, the concept is simple. Offer a description of the object in sight, and your child looks around and tries to guess what it is. For example, you'd say: I'm spying, with my little one, an orange circle. Then, your little one will guess until they get it right. Maybe they see an orange or a round of cheddar cheese. Advertising Still in the not-too-distant past, people in search of gifts were required to shower, dress and brave the cold wind and annoyed fellow shoppers to choose holiday gifts. Fervent deal seekers were looking forward to opening the store on Black Friday (the day after Thanksgiving) as idling engines awaiting ignition. Children flipped through store catalogs for sycaps like doo-eye vending machines, leaving them visibly open to certain pages in the hope that the catalog would somehow accompany their parents to the mall. It was a nasty, rough time. Uncertainty reigned. The aid will come in the late 1960s, when computer scientists at the U.S. Department of Defense created ARPANET - a precursor to the Internet. We didn't know it at the time, but holiday shopping will never be the same again. It didn't work. Instead, the companies opened virtual stores online. Consumers could shop their purchases day or night, respectably dressed or completely naked. Advertising Like most paradigm changes, the advent of online shopping has brought change to the status quo. The shops only need to closely guard their wallet to ensure its safety; not so online. It is exponentially easier to assert your war on temporary seasonal assistance when returning goods to stores. Again, this is not the case online. In this muse, HowStuffWorks laid out five simple tips for online shopping. We begin on the next page. Content When shopping online, plastic is the best way to pay. However, you should remember that your credit card number is static. This doesn't change unless you close or reopen your account, and once your credit card information is online, it can be compromised if it falls into the wrong hands. There are some measures that online shoppers can take to minimize their risk. First of all, it is to ensure that all online purchases are made only on secure sites. To make sure the page you're working on is secure, look for a tiny lock icon usually located in the upper-right corner of the browser URL panel. You can also report secure site, searching for and in the URL. While unsafe sites and pages start http://, secure sites are starting to start https://. Advertising Some web browsers now have larger certificate windows that are easier to read and that allow users to study site information more thoroughly. For example, if you intend to check your online purchases using the Circuit City secure webpage, but the site name on the page certificate doesn't match, clearly manage, and alert Circuit City about the problem. Never send account numbers or any other personal email information that is not secure [source: FTC]. For the same reason, you should never access a website for purchase through an email link [source: Consumer Reports]. Now, how do you have to pay for all that loot? Find out on the next page. Shopping online is easiest with plastic, but some plastic is better than others. It is advisable to use only credit cards, not debit cards, for online purchases. Credit cards represent an extension of the loan, while debit cards draw directly from your bank account. By owning banking information, hackers can do a lot more damage to your finances than with your credit card number. Under the Fair Credit Reporting Act, consumers are protected in the event of identity theft or fraud - if they use a credit card. This law protects account holders by limiting their liability for fraud to \$50. Payments for unauthorised credit card fees can also be put on hold and investigated [source: FTC]. Even better, most credit card companies offer greater protection, sometimes limiting consumer liability for fraud to zero. Using a debit card gives you some federal protection as well. If you notify your bank of a fraudulent debit card purchase within two days, your liability is limited to \$50; after that it raises to \$500 [source: Bankrate]. Advertising Most credit card companies now offer one-time credit card numbers for online purchases. They end after one purchase, and only your credit card company knows which account it's associated with. Using just one credit card for online retailers is another great way to head off potential online shopping headaches [source: Consumer Reports]. If you have one credit card number sent through a cyberspace, the potential for fraud is limited to that single account. If a hacker came for your account information, you'll only have that credit card company to contend with. online shopping could eventually mean the death of a physical retailer, but even if it happens, one thing will be permanent: warehouse. There will always be a need to store a huge number of items and employ in the warehouse of these warehouses. Until the robots take their jobs, warehouse employees will need wages for the work they do. Paying a person for receiving, packing and delivering a product you purchased online is already built into retail costs. But if you return the item, it still needs to be repackaged and replaced, although the company does not any money from the refund. As a result, online stores began to charge for replenishment of returned goods. Advertising Is a reasonable requirement, but some top-up fees are easier to swallow than others. While some retailers charge up to 25 percent or more, a fee of 15 percent of the price you paid for the returned item has become common for intensely packaged products like electronics. Before proceeding to checkout, check out the retailer's return policy, which must be explicitly listed somewhere on its website. Just packed items like books and unopened DVDs don't have to cost you money to come back. Similarly, if you return the product because it is faulty, you should not expect to pay any refund fee. If you've damaged your UPC code or product serial number, however, don't worry about trying to return it - you've pretty much dissected the item forever out of circulation. You can try to resurrevere some of what you paid by listing an item on Craigslist or eBay. Online shopping presents consumers with a remarkable new advantage - the ease of bargain hunting. Before shopping over the internet, finding the lowest price for the item meant perusing catalogues and circulars, travelling from store to store or hitting the yellow pages for a calling spree. Not much anymore. Check out sites such as CyberMonday.com (Cyber Monday is black Friday's version of online shopping) to connect to online deals. Other sites, such as NexTag.com, allow you a comparative store. There are also whole blogs - MightyGoods.com and FindGift.com are great places to get your online shopping chops - dedicated to aggregation of gift ideas lists. Often, however, a simple Google search of the item you want will give even better deals. If you need a more focused search, go to a new Google product search page (formerly known as Froogle). Advertising Search discount sites Overstock.com for the item you want before buying it elsewhere. These retailers buy surplus goods that manufacturers couldn't unload on other discount retailers and tend to pass on savings to customers. Don't be afraid to purchase refurbished items either - it's often just another word for excess inventory [source: Allentown Morning Call]. Tabbed browsing has further paved the way for online deal searches. Do not miss the online coupon code bar when checking out. Open another tab or window and quickly search for retail coupons available on other sites, such as FatWallet.com and CurrentCodes.com. You can come up with a coupon that you didn't know existed, just taking a few extra seconds for a quick search. Many stores will happily provide you with their own promo codes if you sign up for your electronic Enter the code before checking to reap the savings. Keep in mind that these are only tiny tiny hunting facilities on the Web. You may have your favorites, but no one will accuse you of keeping your shopping secrets to yourself. If there is one big downside to online shopping, it is the agony of waiting for your order to be shipped. You used to shop, the more likely they are to arrive on time. Under federal law, retailers must send items within specified dates (e.g., three to five days for standard delivery), or within 30 days if no delivery date is specified in the transaction. To cut shipping fees, try ordering a lot of items at once from one retailer. Your purchases should be sandwiched together in one large package with one delivery fee attached. By signing up for an online retailer's website, cookies uploaded to your computer will store any items in your online shopping cart until you delete or purchase them, allowing you to ship everything at once - and at the same price. Many online retailers offer free shipping for purchases over a certain dollar amount, and online coupon sites regularly offer free shipping coupon codes. Advertising If you can't catch a break from shipping, ordering early enough will allow you to choose a standard delivery. It's almost always the slowest, but if you order early, you have time on your side. Give yourself a little more time if you order from a third-party vendor through a large online store. The retail site delivery date is an estimate one vendor does not always respond to. To learn more about online store logs, see the link on the next page. Is this a way of paying for the future? No cash, no credit card, just your smartphone and finger? Learn how the square works on HowStuffWorks. Anderson, Tanya. Tips for Black Friday not to be so terrible. The Washington Post.
