Sponsor, Borrowing Product for the Magazine: Little Vapoteur Price Of Test Product: 49.90 - Product Category Based on Selling Price: Average Range (41 to 80 Euros) Fashion Type: Variable Electronics Nutrition Is Fashion Telescopic? No maximum power: 80W Maximum voltage: 9V Minimum value in ohms resistance to begin with: 0.1 Eleaf will never stop expanding the iStick family hence The Pico X and Nowos, the last two born. The one we discover today is, I think, the most intriguing of the two boxes mentioned above. La Nowos adopts a new style, it offers only variable power mode. It has a built-in 4400mAh battery and can reach 80W. At 49.90 euros, it is at the beginning of the middle range, which corresponds to the usual brand position. But by the way, I announced the novelty, but which one? We'll talk about it later so we don't tell you all at once. Physical characteristics and felt quality width or diameter of the product in mm: 28 Product Length or height in mm: 83.5 Product weight in grams: 150 Material consisting of the product: Aluminum, PMMA Form Factor Type: Classic Box - VaporShark Type Decorative Style: Classic design quality: Is the coating of fashion sensitive to fingerprints? No all the components of this fashion seem to be well assembled? Yes Fire Button Position: Sideways near the top cover Fire button type: Mechanical plastic on the contact rubber Number of buttons in the interface, including touch areas if they are present: 2 Type of user interface buttons: Touch the quality of the button interface (s): Very good, the button is responsive and does not make any noise Number of parts in the product: 1 Number of streams: 1 Flow quality: Very good Yes Rating vapelier on the quality of the senses: 4.1 / 5 Reviewer comments on physical characteristics and perceived quality Eleaf we offer iStick a whole new aesthetic. It takes a ambiguous look because I would call it very modern, but it also has a kind of neo-retro look. It is a kind of small sandwich, which consists of two white plastic plates that surround the frame of zinc alloys. The facades are impeccably white in the version that has been given to me on other models, it is black. Monochrome is interrupted only by Eleaf labels on one and iStick Nowos on the other. At the top of one of the slices, we find a switch, a circular plastic button. This button is a fire for me, just a small black dot of this box, from the first contact it shows a sense of fragility. At the bottom of the same person, you can see a small hole topped with a reset inscription. On the opposite side, we discover a little surprise, a port that allows the battery to recharge. So, the micro-USB charging port that We'll see. Later... At Top-Cap, the required 510 connection, the stage can accommodate atomizers up to 26 mm in diameter in the entire flash. No other element, no button more or less, it's very uncluttered, it will probably wait to know where the settings of the buttons are. Whole clean, well-assembled, eye-pleasing, Eleaf we offer a product that at first glance adheres to the tariff plan. Functional features Type of chipset used: Owner's Connection Type: 510, Ego - via adapter Adjustable positive plot? Yes, through spring. Lock system? Electronic quality lock system: Well, the feature does what it is for features offered by the mod: Battery display, resistance values display, protection from short circuit from sprayer, Displaying power of the current veip. Displaying the time of the veip of each puff, supports the update of its firmware, Clear Diagnostic Messages Battery Compatibility: Own Battery (4400 m) No number of batteries used: Batteries are owners / Is it not applicable mod to keep its configuration battery-free? Doesn't lee mods offer a top-up feature? The feature can be recharged via USB is the recharging feature end-to-end? Yes, does the regime offer the Energy Bank function? No food bank features offered by Lee's fashion mode offer other features? No other feature offered by fashion Having to regulate the flow of air? Yes Maximum Diameter in mm compatibility with sprayer: 26 Precision power at full battery charge: Well, there's a tiny difference between the required power and the real power accuracy of the output voltage with a full battery charge: Well, there's a tiny difference between the requested voltage and the note of the actual Vapelier voltage regarding functional characteristics: 4.3/5 Reviewer's comments about functional functions For this Nowos One and only variable power mode that will allow you to vaper at a value of 1 to 80 W. The drag value should be between 0.1 and 3, the typical range of use for WV mode. When one wakes up his box, one of the white faces lets shine in transparency the LED screen is a stick type with a vintage aspect. It displays power, resistance value, battery level as a percentage. When we shoot, we have the right to a chrono puff present on all iSticks. The battery capacity is 4400 mAh, which should provide a comfortable battery life. It can be recharged very quickly (80% in 45mn) thanks.... USB type C, and yes, this is a novelty offered by this box. This fork equips the latest smartphones, the newest laptops and offers greater strength because it can withstand more powerful currents to provide a faster charge. Simple which offers classic features with a new twist: USB USB type Evaluation packaging Availability of the box accompanying the product: Yes would you say that packing up the price of the product? Yes The presence of a user manual? Yes, is the guide for non-English clear? Does the guide explain all the features? Yes Vapelier note on the packaging: 5/5 Reviewer comments on air conditioning black cardboard box that simply carries the inscription Eleaf. It is wrapped in a thin cardboard case on which we find an image of our box on a black background and on other faces, we find the usual procession of regulatory logos, links to social networks and the famous description of content. Inside are our Nowos, USB C cable and recording translated into several languages, including French. Nothing very much foli, but it's serious and very clean and completely in line with the price displayed. Grattitudes in using Light Transport with Test Injectors: Ok for external pocket jackets (no deformations) Disassembly and cleaning objects: Super simple, even blind in the dark! Easy to change batteries: Doesn't it apply, the battery is only rechargeable Lee mod to heat up? No, was there unsustainable behavior after one day of use? No Vapelier note in terms of usability: 4.5/5 Reviewer comments about using a product with its unique mode of operation of variable power. Nowos is easy to understand. Just like always up to 5 consecutive clicks on the switch to turn on the box and it also works to turn it off. To adjust the power, you need to make buttons appear and - since they are hidden. 3 pressing the fire button and 2 small glowing dots appear on the facade that integrates the screen, we will press the left to reduce the power and right to increase it. Click on the fire button and our two small commands disappear immediately when the chosen power is blocked. It's very simple. The screen is legible, no need to take out a magnifying glass to read the information displayed. Ergonomics are good, size and weight are quite acceptable, given the battery 4400 mAh. The battery is recharged quickly and this new USB standard is very handy, as there is no point in inserting a plug into the USB C port. The veip is good, the box is reactive and provides a perfectly adjustable current. An affordable product does not need to be a geek to enjoy, and that offers good performance. Recommendations for the use of the type of battery used during tests: Batteries are the owners of this mod Number of batteries used during tests: Batteries are owners / Not applicable with what type of sprayer is appropriate to use this product? Dropper, Classical Fiber, In Sub-ohm Mount, Genesis Rebuildable With which spray model is appropriate to use this product? One of your choice until it exceeds 26mm Test configuration used: Related to ARES on 1/Govad RTA 0.5 Description of the ideal configuration with this product: you see, there are many features was a product loved by the reviewer: Yes The Total Average Vapelier for this product: 4.5/5 Mood ticket reviewer La Nowos does not represent anything very new, finally, this is what we say if we will stick to only one mode of variable power. So yes, the look is pretty original, especially when you turn on the box and the control screen appears in transparency on the facade. Then there is the question of where are the controls that can adjust the power, look at the recording, and we find that we have to press 3 times the fire button. It is then above the zone where different constants are displayed, two small bright circles are shown. It's also new, but it doesn't revolutionize the genre, even if it's very nice. The box works well, it tames easily and is finally effective in its simplicity. So good, look, screen, controls are good, but it's not enough. There is a 4400mAh battery that offers good autonomy, but it's not new either. But we are on the right track, as the big novelty on this Box lies in the USB C-type port to recharge the built-in battery. This seems to me to be a real first and we need to see this new standard evolve. In addition to the convenience offered by the fact that the fork has no direction of connection, this new standard allows you to use higher-intensity currents and thus to quickly recharge the box. Not to mention the icing on the cake, this new USB port is also stronger. La Nowos didn't revolutionize Veip, but the approach of The Telegraph is quite interesting. A versatile product available to as many people as possible and practical enough to go back to basics, offering only variable power mode. We like it or not to watch it, personally I'm not a big fan, but I'm sure many people will like it. The only point on which I have doubts is the fire switch, which suggests that it may be a bit fragile, but that's just an impression, of course, because this button is plastic. For monitoring. After all, the box is pretty nice and original, which is able to satisfy beginners and more advanced vapoteurs. Good veip, Vince.
