But the most important aspect is that the use of all tools is easy, convenient and very intuitive. Making a movie from scratch is easy with Cute CUT. The first thing you need to do is choose the format of the output you want: portrait, landscape, square ... Once you decide this, you can start making your film using all kinds of materials. You only need to add an item, whether it's a video snippet, image or audio file, and move on to a timeline. You can overtake items, create transitions, move from one timeline to another, and so on. It's all just dragging. Cute CUT includes over 20 different transitions to connect video snippets with your photos. And yet, you can add a lot of filters and other effects such as transparency that will help you combine and put text and photos in the video. Doing all this is as easy as clicking on an item for a second. Cute CUT is an excellent video editor that helps you create relatively complex videos using different types of multimedia content. When you're done creating, you can also easily share in any social network or just keep your smartphone's memory in mind.
