18. Glow Plug Waiting Indicator. When illuminated, indicates the glow of the cork on. Glow candles are automatically turned on with the ignition chain and remain turned on for about a few seconds. Start the engine only after the light comes out. Station NOTE Platform: To start the engine, the footswitch must be in a vacated (up) position. Footswitch must be activated in order to allow the platform controls to function. NOTE: These machines have a 7-second delay timer. If the function has not been activated within 7 seconds of the depressing footswitch, recycle the footswitch. 1. Footswitch. This feature makes it necessary for the depression leg switch to allow the control platform to work. TO AVOID SERIOUS INJURY, DO NOT REMOVE, CHANGE OR BREAK LEGS, BLOCKING OR BY ANY OTHER MEANS. FOOTSWITCH SHOULD BE ADJUSTED SO THAT THE FUNCTIONS WILL WORK WHEN THE PEDAL IS ABOUT THE CENTER OF ITS DEVELOPMENT. IF THE SWITCH RUNS WITHIN THE LAST 6.5 MM OF TRAVEL, TOP OR BOTTOM, IT SHOULD BE ADJUSTED. 2. Power stop/emergency. The Power/Emergency Stop switch and the sep-arate Start/Auxiliary Power engine switch switch on the electrical power supply platform console for the starter solenoid when the ignition switch is placed in the ON position and the ENGINE START start switch ispush forward. Turn on the indicator. (Green) To turn on the controls, oppress the footswitchand to choose any function within seven seconds. Control will remain active until there is a delay of seven seconds between stopping one function and running the next. If the seven-second interval is exceeded, the lights will go out and the controls won't work. In order to con-troll again, remove the leg from the footswitchand oppress footswitch. 4. Horn Travel Warning. The push-type horn switch delivers electrical energy toan audible warning device when pressed. 5. Slope alarm warning light. (Orange) This orange lighter indicates that the chassis is on a slope (more than 3 degrees). If illuminated when the boom rises or expands, pull in and below the tobelow horizontal then change the position of the machine so that it islevel before the expansion boom or the rise of the boom above the horizontal. If the boom is above horizontal and themachine is at 3 degrees of tilt, the alarm will sound and Creep is automatically activated. IF ILLUMINATED WHEN THE BOOM RISES OR EXPANDED, PULL IN AND BELOW THE HORIZONTAL, THEN THE REPOSITORY-TION MACHINE IS SO THAT IT'S LEVEL UP TO EXPAND OR RAISE THE BOOM ABOVE THE HORIZONTAL. 6. Tower or Lower Boom Lift. The central switch switch ensures that the lower and middle booms are raised and lowered up or down. NOTE: Main Lift, Swing, and Drive control levers are loaded by the spring and automatically returned to a neutral (off) position when released. TO AVOID SERIOUS SERIOUS DO NOT WORK WITH THE MACHINE IF ANY CONTROLS OR SWITCHES THAT CONTROL MOVEMENT ARE NOT RETURNED TO THE OFF OR NOAH-TRAL POSITION WHEN RELEASED. 7. Main lift/swing controller. The dual joystick axis is provided for the main lifting and lifting. Push forward to lift up, pull back to liftdown. Move to the right to swing to the right, move left to left, left. Moving the joystick activates the switches for the pro-view of the selected functions. Proportional control over these functions can be achieved with the Func-tion Speed handle. NOTE: The main lifting and swing functions can be selected in combination. The handle has a round gate sothat the maximum speed decreases when a few func-tions are selected.
