By R.L. Cultrona Videos can be delivered to television in different ways. Depending on what input TV has and how old the TV is, you may have to perform a video conversion in order to get the video to be displayed correctly on television. If you have videos coming from a coaxial, radio-frequency type of cable, but the only input you have is S-video, video-only cable, you will have to run the video through some sort of converter box. Connect the coaxial cable of the video input into the video in coaxial port on a VCR or cable box. Most likely, this comes from the wall as the input of cable television. The coax cable will need to be put in the port and screwed in place. Connect one end of the S-Video cable into an S-Video Video Out exit to a VCR or cable box. Connect the other end to the S-video TV. Turn on the cable box or VCR. Turn on the TV and set it on the correct video input display. Read the instructions on TV to learn how to get a TV to display S-video input. The video should be displayed on television. James Clark RF (or radio frequencies) is a method of transmitting audio and video from a source of programming, as a broadcasting station, to a television or other electronic device, usually with a coaxial cable. The VGA (Video Graphics Array) connection is used to transmit video signals from one device to another, for example, from computer to monitor. VGA forks have a distinctive shape and nine brass pins. Converting rf signals to VGA requires an RF modulator and a VGA-to-S-video adapter available in both electronics and computer stores. Connect the coaxial cable that carries the RF signal to the input connector on the RF modulator. The steam at the end of the cable turns clockwise to fasten it into the socket. Connect the DC power cord to the modulator and to the wall socket. Insert the S-video connector at one end of the S-video-to-VGA adapter into the RF OUT modulator connector. Attach the VGA connector at the other end of the S-video-to-VGA adapter to a compatible video device, such as a computer monitor, and then secure the plug to the connector by turning the locking screws clockwise on each side of the fork. Turn on the VGA and the RF modulator to watch the video from the RF signal. Any video converter is an easy-to-use free video converter software program that supports over 100 video input formats.
