

# Amazon fire tv cube setup instructions

I'm not robot

**Continue**

Since Amazon discontinued Amazon Fire TV, we're left with four options for Amazon Fire TV streaming devices. We have Fire TV Cube, which combines streaming TV with Amazon Echo. We have three flavors of Amazon Fire TV Stick, Fire Stick 4K, Fire Stick, and Fire Stick Lite. The only major difference between Fire Stick and Fire Stick Lite is audio support and the Fire Stick remote allows you to control the power and volume of the TV where Fire Stick Lite is not. This article explains the significant differences between Amazon Fire TV Cube and various Amazon Fire TV sticks and helps you decide which one is right for you. I did a full review of all these devices for those Who's Looking for a Deeper Dive: Review Fire TV Cube Review Fire Stick 4K Fire Stick Review and Fire Stick Lite Three Type of Fire Sticks Price for Amazon Fire Stick 4K: \$49.99 Price for Amazon Fire Stick: \$39.99 Price for Amazon Fire Stick Lite: \$29.99 Before We Get into Fire TV Let's Look at the Difference Between Amazon Fire Stick and Amazon Stick. Both Fire Sticks have the following features: Voice support with Alexa Voice Remote (included) Double Range, dual antenna 802.11a/b/g/n/ac MIMO Wi-Fi/Dolby Audio, 5.1 surround sound, 2ch stereo, and HDMI audio through to 7.1Support for Dolby Atmos AudioThe applications and available content are the same. The HDR Support Amazon Fire TV Stick costs \$39.99 on Amazon. However, the Amazon Fire Stick 4K cost \$10 more (\$49.99) and adds the following features: Basically, the choice comes down to 4K video. If you're happy streaming movies and TV at 1080p, then go with Amazon Fire Stick. However, if you need 4K image quality in HDR, chose Amazon Fire Stick 4K. Now, if you're OK with 1080p video, you can save another \$10, catch with Amazon Fire Stick Lite. The only two differences between Fire Stick and Fire Stick Lite are: the remote control that comes with Fire Stick has a TV button allowing you to control the power and volume on your TV while Fire Stick Lite is not. Amazon Fire Stick supports Dolby Atmos, Dolby Digital and Dolby Digital, and the Lite version only supports these features through HDMI audio pass. Amazon Fire TV Cube Price: \$119.99 If you're just looking for a streaming device, I recommend going with Amazon Fire Stick 4K. However, if you're looking for a streaming device that doubles as an Amazon Alexa device with built-in speaker, you can choose the Amazon Fire TV Cube. Like Amazon Fire Stick 4K, Amazon Fire TV Cube has the following features: Voice support with Alexa Voice Remote (included) Dual band, dual antenna 802.11a/b/g/n/ac MIMO Wi-Fi/Dolby Atmos Audio, 5.1 surround sound, 2ch stereo, and HDMI audio through to 7.1Supps Up to 4K Video HDR at 60 fps However, with Amazon Fire TV Cube, you'll also get: The best menu response time is because of the best Far-Field Voice Voice Fire TV processor and other smart devices Built in Amazon's SpeakerThe Power Alexa, even with the TV offSupport for Ethernet with the Fire TV enabled Ethernet Dongle In addition to it is a great streaming device, it acts as a hub for your smart home. You get all the functionality of the Amazon Echo in your Fire TV. Fire TV Stick or Cube Those who want to experiment with cord cutting should watch to grab the Amazon Fire TV Stick or Fire Stick 4K. The low price makes it an easy investment. Most people have more than one TV, so you can always pick up another one for other TVs if you like cord cutting. If you can donate to watch videos in 4K you can save \$10 and go with a fire stick. If you can go even further and not have a remote control that powers your TV and controls the volume, you can save \$10 with Fire Stick Lite. However, if you're looking for a device that can stream and hub your smart home, you can go with Amazon Fire TV Cube. If this article doesn't answer your specific question, click on our homepage! It will guide you to affordable internet service providers, streaming services to meet your needs, information about antennas, and many other tools and resources to help you save money on television and the internet. Tips and tricks on cutting the cord and other technical topics be sure to join our Facebook page. Disclosure: Grounded cause is supported by a small commission for purchases made through some product links on this site. We do not accept compensation from companies attempting to influence our product review. Lifewire/Emily Ramirez We purchased the Amazon Fire TV Cube so that our expert reviewer can thoroughly check and evaluate it. Keep reading for our full product review. Renewed for 2019, Amazon Fire TV Cube brings powerful hardware that can transmit thousands of channels and applications in full 4K HDR encoding Dolby Vision. The glowing cube also takes voice commands, mostly making it an Echo speaker, but is Alexa's brain and its muscular hexacor processor enough to justify its relatively hefty price tag? I spent 15 hours putting it to the test, reading on to see how I liked it. Lifewire/Emily Ramirez Fire TV Cube is a cute, futuristic-looking block that will stand out on your home console despite its 4-inch side. From the outside, it has hardly changed compared to the first generation model. At the top, there is a blue LED bar that lights up whenever the cube Measures. The sides of the cube have a glossy black finish, which is a fingerprint magnet. There's volume and menu buttons on top as well, but we don't anticipate much use for them, given that the cube comes with a remote control. At the back there is an HDMI connector, a power adapter port and a micro micro Port. In order to give users flexibility in the way they created their streaming system, Amazon built eight directional microphones into the Fire TV Cube and another into the remote control. As long as the cube is at least a foot away from any sources of audio output (i.e. speakers), it should have no problem hearing voice commands from ten or more feet. Cube's voice commands are probably its most distinctive feature. Unlike Fire TV Sticks, Fire TV Cube also functions as an Alexa speaker, which means that it will respond to any voice commands, and more importantly, it has the same capabilities as the Amazon Echo. In other words, it can control IoT devices such as smart lamps, thermostats and Ring doorbells. You'll also get an Alexa-enabled remote with Cube. It has buttons to navigate the user interface, but it also has volume and power buttons that will work with the TV. It is small, the size of a palm, and it has a matte black finish that will make it easy to grip. Relatively large buttons make it easy to navigate the cube without looking at the remote control as well. Amazon Fire TV Cube is a fantastic streamer for those who are committed to the Alexa ecosystem. My biggest pet peeve with Cuba design and features is its accessory bundle. For \$120, Amazon could afford to throw in an HDMI-\$30 Roku Express cable has one, for example. If you end up buying Cuba, be sure to also get an HDMI cable. I found Blue Rigger strikes a great balance between availability and quality if you need a recommendation. Compared to the Fire TV Stick, the cube is a little harder to set up - it doesn't automatically load like a stick, and you have to take into account its infrared receivers. It should have a clear line of sight to your remote control, so place it somewhere you can see it. In addition, if you want to take advantage of its 4K features, you'll probably want to use the Included Ethernet adapter (and you need to purchase an Ethernet cable). After connecting the cables and the power coming into the cube, you now need to go through the software side of the installation. It will ask you to connect to the Internet, select some apps/channels, and log into your Amazon account. With a hexa-core processor and an ARM Mali G52-MP2 GPU, the Fire TV Cube is blazing fast. Any problems streaming 4K content will come from your internet connection. When I tested it, the content was downloaded instantly, with little or no buffer time and instant sketch downloads. The video looks bright, and the sound sounds very much thanks to HDCP support and Dolby Vision coding. I had no problem getting my content surround sound and in HDR, without any additional installation from my audio system or 4K projector. The video will consistently stream on 4K 60fps. If the show was particularly loud, Alexa had some trouble hearing me, but it was correct by lowering or muting the volume. Alexa never confuses audio content for the team. However, while I had no problem with alexa understanding my commands, I would be a little more military if your accent deviated greatly from the standard American English. Google language recognition protocols tend to have a better understanding of other languages and accents. Lifewire/Emily Ramirez software is simultaneously Fire TV's strongest and weakest point. On the one hand, the amount of content available on the Fire TV platform is amazing - there are more than 5,000 apps to choose from, as well as a meager library of simple games. If you are looking for something, you will find it. However, you'll have to find it in the sea of Amazon content. The Fire TV interface is very much conducive to Prime Video content, and this becomes doubly obvious the further you scroll on the home screen. I love quite a few Emmy-winning originals at the premiere, so it doesn't bother me so much, but I can see it becomes infuriating if you just want neutral recommendations (Roku software is much better to feel impartial). The home screen is not particularly well organized. Your apps make up the top line and the rest is offered content (usually Amazon content). Finding a show in the search bar will show Amazon results first, and other apps second. Once you're in the app menu, it's not that bad. Netflix, for example, works the same way as any other streaming device. The platform has many great apps, from YouTube to IMDb and Crackle TV. There are weather apps, news apps and sports apps for all tastes. There's even a few music streaming apps, including Spotify and Amazon Music. If you want an Echo that's also a media player, cube your best option. It comes with excellent performance, controls for IoT devices, a built-in speaker and microphone, and a slender look. If you're interested in Cuba because you love Amazon products and content, you'll be happy with the choice of Prime Video. There are many, many shows included with your prime subscription, many of them with a stellar production team. Almost all of Amazon's originals are shot in 4K, so you can get most of your Cuba performance capabilities. If you haven't already, you should watch the space and the wonderful Mrs. Maisel. Lifewire/Emily Ramirez Fire TV Cube costs \$120, which, frankly, is a little expensive compared to the Fire TV Stick 4K or Amazon Echo. However, if you want an Echo that's also a media player, cube is your best option. It comes with excellent performance, controls for IoT devices, a built-in speaker and microphone, and a slender look. While it's not the best value streaming device, it is, universal and a well-known one. There's a lot to consider if you choose between Ultra and fire TV cube. Specs-wise, Fire TV Cube is undoubtedly more powerful and supports more codecs. However, the Roku Ultra has more than enough energy to handle 4K content, and it supports HDR, so only the most picky movie buffs will even notice the difference. Roku has the edge when it comes to software, with the largest and most diverse library of any streaming platform. Both its menu and search function are agnostic platform, which means that it is just interested in presenting you with the most relevant and cost-effective results. For those who like quiet listening, you can also sync the sound to your phone or remote control and listen with headphones. Meanwhile, Fire TV Cube has IoT integration. The final verdict is a powerful streaming device with lots of extra functionality. Amazon Fire TV Cube is a fantastic streamer for those who are committed to the Alexa ecosystem. However, it's a bit expensive if you only want a reliable 4K streaming, in which case you can be better served fire TV Stick 4K or Roku Streaming Stick for \$50. Fifty dollars.
