Примечание: Для чистого десятичного результата, пожалуйста, выберите десятичный из вариантов выше результата. Показать формулу Показать рабочий Показать результат в экспоненциальном формате Подробнее: Дюймы Подробнее: Centimeters Использование дюйма можно проследить еще в 7 веке. Первое четкое that we could find The length was after 1066, when it was defined as the length of three barley corns. This was not a satisfactory reference as the lengths of the barley vary naturally. The British Standards Institute identified an inch as 25.4 mm in 1930 in the paper Metric Unit in Engineering: Going SI. In March 1932, the American Standards Association was asked to decide whether to adopt the same value (at the time the American inch was 1/.03937 mm, which approached 25.400051 mm). Because the values were so close, and because Britain had already settled on this value, the ASA adopted this value on March 13, 1933. The centimeter is a unit of length in a metric system equal to one hundredth of a meter. 1cm is equivalent to 0.39370 inches.
