Aqua, Cetearil Alcohol, Toluol-2,5-Diamin, Bis-Diglisiril Polyakiladipat-2, PEG-40 Hydrogen Castor Oil, Thodium Cetearil Sulfate, M-amine, Sodium Sulfate Loret, CI 77499, CI 77491, CI 77492. If you are not lucky enough to have luscious eyelashes and naturally beautiful eyebrows, then toning is the fastest and easiest way to get them. This process makes the eyelashes look darker, longer and denser, without the need for mascara. Similarly, eyebrow toning makes the eyebrows look longer, thicker and darker and offers extra structure and volume for rarefied eyebrows. Eyebrow and eyelash toning is recommended for its practical, long-term results and reduces the time of applying makeup. Read on for tips on toning with RefectoCil, from our online resort and salon provider. 5 tips for the best results with RefectoCil Eyebrows and Lash Tint To get the best eyebrows and eyelash toning results, here are five top tips you should follow. Tip No. 1 - Before toning: This step is very important in order to get an excellent toning result. Before applying a shade to your eyebrows and eyelashes, gently remove all eye makeup with a non-oily RefectoCil eye makeup remover. Eyebrows and eyelashes should be clean, dry and oil-free. Now dislocated two strips of documents to protect the eyes refectoCil. Gently apply a refectoCil skin protection cream to the bottom cover and the bottom of the two protective eye paper. Next, place these eyelash protection paper under each eye/lash set, so that no shade/product touches your client's skin. Tip No 2 - Prepare toning: Mix 10 drops of RefectoCil Oxidant Liquid and 2 cm dye to get a thick, creamy paste. Mix together with your RefectoCil Applicator in the RefectoCil performer palette. Tip No. 3 Tinting: Ask the customer to close their eyes and apply a cream paste on the eyelashes with a wand to apply. Make sure all her lashes are adequately covered with a shade of the mixture. In addition, apply toning the paste on the eyebrows (in the direction of her natural hair growth). Let it set for 5 - 10 minutes. Tip 4 Eyebrow cleaning: After 5 - 10 minutes, remove the excess shade (if any) with a soft and dry cotton swab. Note that if the shade blend touches the skin, use RefectoCil Tint Remover to gently remove the stains. However, be sure not to get any on your eyelashes or too close to your client's eyes. Tip No. 5 Eyelash Cleaning: Carefully remove the lash protection paper. Also, remove excess shade (if any) with a soft and dry cotton swab. Shades of Brow Refectocyl/ lash Tint How to choose the right color: The last toning makes light lashes visible and highlights their true length, tinting tips bleached by the sun and water. Eyebrow toning highlights eyebrows and matches the lighter areas of the eyebrows with hair on the head. 0 Blonde: Whitening paste for eyebrows. 1 Pure Black: Shade of any The color is pure black. 1.1 Graphite: For discrete gray/white hair coating. 2 Blue black: Blue shine enhances the depth of color. 3 Natural brown: Very dark and well concealed brown. 3.1 Light Brown: Perfect when applied to light blonde hair. 4 Chestnut: Intense color results when used on light blonde blonde brown hair. Chestnut glitter from the medium brown hair on. WARNING: Don't mix with other colors! 4.1 Red: Intense red for light and medium blonde hair. Dark red when used on dark blonde to medium brown hair. Red glitter from dark brown hair. Tip: For a more intense color effect, ease in advance with RefectoCil blonde (level #0)! Upgrade your RefectoCil Stock with JMT Beauty! Not suitable for use with any other oxidized brands. Are Refectocil products tested on animals? Refectocil products are NOT tested on animals. Is a skin sensitivity test/patch test necessary? YES AND YES! There are a small number of people who may have an allergic reaction to shades, hair dyes and other chemical treatments. Only in rare situations can the reaction be severe. Customer comfort is essential - to eliminate any discomfort Refectocil strongly recommends the skin sensitivity test will be performed before each application. Even people who have their eyelashes and eyebrows tinted regularly can still have an allergic reaction. If a customer refuses to have this test, it is worth having as a salon policy that the customer would have to sign the waiver. Please read carefully the instructions on how to perform the skin sensitivity test, which are included with each shade of refectocyl. Can I use barrier cream/vaseline around the eyes while tinting? NO it is not recommended - only the use of a face protection cream can be used around the eyes as it has been specifically designed for the sensitive eye area. In PAST, many other products have been used to provide barrier and protection against skin staining. However, with constant research, it has been found that it is these types of products that have caused reactions to the delicate skin around the eyes not toning the process itself. Can pregnant women have their eyelashes and eyebrows toned and or Refectocil policy for pregnant women is that it should be the solution of customers. Pregnant women should not be advised to have any chemical treatment if it is their choice to do so. Everyone is different and again if they decide to proceed to Skin sensitivity/patch test should be performed at least 24 hours before treatment begins. Additional tip and advice: It is recommended that all salon operators have a risk of treatment and a form of salon policy that each customer must complete and sign. So every treatment is explained and you have made your client aware of your salon's policy. What color shade is suitable for which customer? There are 10 different color shades for tinting eyelashes and eyebrows or for lightening eyebrows. Discuss your wishes and expectations with the client before tinting. With the Refectocil Color Chart you can easily show what toning results can be achieved from different color shades. Some shades are suitable for every natural hair color (pure black, blue black, natural brown, chestnut, red, blonde); other shades are suitable only for lighter natural hair colors (dark blue, graphite, light brown, purple). The color scheme does not specify the color result for inappropriate combinations. What is the correct seating position for the client when tinting eyelashes and eyebrows? The correct position for the client during toning is not lying down, but sitting and/or leaning back slightly. The eyes should remain closed during toning. The client should relax, direct the gaze down or straight forward, and not move his eyes. Tip: If it is difficult for your client to keep an eye still while applying the lash shade place a soaked cotton swab on each of the closed eyes; It makes it easier to keep your eyes closed. Is eyelash and eyebrow toning also suitable for men? Hair, eyebrows and eyelashes have long been the only area of a woman. But with an ever-increasing number of men who attach particular importance to personal hygiene, men have found the incomparable benefits of eyelashes and eyebrow shades: look simply better with longer and longer voluminous lashes and eyebrows. Up to six weeks! With a touch of eyelashes and eyebrows men can finally give themselves a little help, in order to accentuate their eyes. It is additionally important for men: compared to mascara, tinted eyelashes and eyebrows always look natural! Open the eyes of a male customer! The effect of the shades can also be used for shade of lateral burns, beards and moustaches. Finish the beard toning page on the video page. Is the color that squeezes the final color out of the tube? No, it takes mixing into an oxidizer to create a color hue. Is Eye Make-Up Remover Right that using Eye Make-Up Remover is important even though the client doesn't wear makeup? Yes, before each toning of eyelashes and eyebrows hair should be treated with a non-oil eye refectocyl Make-Up Remover. This is especially important because the client's hair should be oil-free and clean from any makeup residues within the to the toning. Only then are the best possible and lengthy toning tones can be achieved. LongLash Gel Colored hair should be regularly treated with air conditioning. What's it like with eyelashes and eyebrows? Special care is required not only colored hair, but also toned eyelashes and eyebrows. Tell your customers about the importance of regular care after eyebrow and eyelashes, and recommend a specially designed Refectocil LongLash Gel care gel. Made from valuable vegetable oils and enriched with vitamin E and D-Panthenol Refectocil LongLash Gel helps eyelashes and eyebrows stay healthy, long, strong, shiny and beautiful. As a result, customers will be more satisfied with the quality of the shade, as the shade lasts longer on healthy hair. So you should recommend the daily use of Refectocil LongLashGel for your customers! Why do you use whitening paste? The effect of whitening paste No 0 blonde brightens eyebrows to 3 levels: - To match too noticeable or dark eyebrows with dyed blond hair - To achieve the desired natural color (4N to 9N) as the basis before tinting with RefectoCil No. 4 chestnut and No 4.1 red bleach to match too noticeable or dark eyebrows with dyed blond hair Customers with dyed blond hair, whose natural color is black or brown, will be surprised! In the past, false blondes can be easily exposed because of their too visible or dark eyebrows. This applies to the past as eyebrows can now be lightened to 3 levels with RefectoCil whitening paste for eyebrows No 0 blonde and the result will perfectly match the shade of bleached/dyed blond hair. Bleaching before tinting with RefectoCil No 4 chestnut and No 4.1 red Using The Tested No 0 blonde brow bleach before tinting with No 4 chestnut and No 4.1 red you can achieve a variety of red and chestnut colors, no matter what the natural color of your client's hair. Refectocyl No. 4 chestnut and No 4.1 red can be used without pre-bleaching for natural colors from 4N to 9N. For natural colors from 1N to 3N, use the refectocyl No.0 blonde before tinting with chestnut No 4 or No 4.1 red to reach 4N or lighter, if desired. Clean your eyebrows after bleaching with a non-oil eye refectocyl Make-Up Remover, because the eyebrows should be oil free and dry, so that the next application of the bestocyl shade the optimal toning result can be obtained. How to get a suitable color for ash Blonde customers who find 3.1 light brown too red Mix 3.1 Light brown with 1.1 graphite in a ratio of 1:1 to get a toned down, ash hue. By mixing the colors of Refectocil Fundamentally you can mix all the colors of Refectocil, except for the chestnut no. 4 refectocyl - with each other. However, we recommend this only to experienced With available Refectocil colors, you can achieve a variety of shades and fulfill the wishes of almost all customers. Please note that the refectocyl No. 4 chestnut under no circumstances should mix the mix Other colors of the prefectocyl! Also, you should never mix refectocil lashes and eyebrow shades with other eyelashes and eyebrow brands. How long is the correct time of use when toning your eyebrows? The time it is different from customer to customer; It depends on the customer's hair. The toning effect increases with a longer application time. The application time as a whole is up to 10 minutes, with the refectocyl No 4 chestnut, No 4.1 red and No 0 blonde up to 20 minutes. If you do not have a lot of experience with tinting, remove the toning paste in 2-3 minutes with one eyebrow and check the result and/or show the customer. If the result of tinting is not yet intense enough, apply the toned paste again and leave the length.
