Disney Plus is without a doubt the biggest launch in the history of the premium streaming services industry. Now you can stream not only tons of classic TV shows and movies from Disney's extensive library, but a few original shows and movies as well. The price of Disney Plus is also pretty reasonable. It costs \$6.99 per month, or \$69.99 for an annual subscription. But is there a way to get Disney Plus for free? Read more: What's New on Disney Plus! Yes! Here are at least a few ways to get Disney Plus for free. If we find any other ways to get the service for free, we'll add it to this article. Note that until recently there was a seven-day free trial for all new customers, but now it has been discontinued. Disney Plus is free for Verizon Wireless and Internet customers. Verizon Wireless offers many ways for its wireless customers to get Disney Plus for free. If you sign up for Start Unlimited or Do More Unlimited plan, you can get the service for free for six months. If you sign up for the Play More Unlimited plan or get more unlimited plan, you can get not only Disney Plus for free, but also ESPN Plus and Hulu (with ads) for free as well. The proposal does not appear to be expiring. Usually this package costs \$12.99 per month. If you are a new Verizon customer wirelessly, you can in pretending to be your free Disney Plus plan by creating and signing into your Verizon account. You can do that either on my Verizon site or through my Verizon app. Once you've signed up you should see the Disney Plus promotion. Click on the Get Disney selection and go through the normal service registration process. New customers for Verizon consumers Fios Internet service can also get a free year Disney Plus. This also applies to new and current customers of Verizon 5G Home Internet Services. Bad news? Current Fios Internet users are not eligible for the free year of Disney Plus. If you've already signed up for Disney Plus and happen to be a Verizon Unlimited customer, you can still get that free offer. You can sign up for a free offer through Verizon, but it won't automatically replace a previously purchased subscription. Verizon should send you an email with information on how to manage a pre-purchased Disney Plus subscription. More information on Verizon Wireless free Disney Plus offer. Some U.S. Mobile customers can get free Disney Plus-Hulu-ESPN Plus bundle. The U.S. Mobile Wireless Carrier offers perks to people who subscribe to several unlimited lines to account. This includes a way to get a free Disney Plus-Hulu-ESPN Plus bundle, which is usually \$12.99 a month. You just need to have three unlimited lines for your account and then you choose a bundle from a selection of streaming services. New Chromebooks shoppers get three months for free. Chromebooks already a huge deal for people you need a notebook to browse the web, watch videos, and launch Android apps. Now Google has launched a limited time offer for those who buy a new Chromebook. These buyers can get three months of Disney Plus for free. Google launched a similar offer earlier in 2020. Here's how it works: When you buy a new Chromebook, you then use it to go to the Chromebooks Offers web page. Click on the Get a Shake option on Disney Plus. You must get the promotional code within three free months of Disney Plus. Then, on your new Chromebook, just go to the Google Play Store and download the Disney Plus app. You then create your Disney Plus account in the app. When you reach the payment page, enter the promo code in the Redeem Code section, and your three months of Disney Plus will begin. This offer is only for U.S. residents, and only for new Disney Plus subscribers. Deal for a limited time, but there is no word on when it expires. If you are buying a new Chromebook, you may need to get this offer as soon as possible. For more information on Chromebooks-Disney Plus offer. Get six months free with Sonos Arc or beam sound panel purchase. From October 1-31, new Disney Plus subscribers in the U.S., Canada, UK, Sweden and the Netherlands will be able to get six months service for free as a special promotion when buying the new Sonos Arc or Sonos Beam sound panel. Disney Park employees can get Disney Plus for free if you work in one of Disney's parks, like Disneyland in California or Walt Disney World in Florida, you will be able to qualify for a free Disney Plus subscription. The offer will be a special package that includes Disney Plus, Hulu and ESPN Plus in one package. It usually costs \$12.99 a month. Unfortunately, these actors will have to choose between either a free Disney Plus bundle or a Disney Parks Main Entrance Pass. The offer allows employees to give free passes to family members and friends at Disney parks. Delta SkyMiles member offer. If you are a current or new member of Delta SkyMiles, and you travel on certain routes on the airline, there is good news. You can get Disney Plus for free with a new two-week trial period rather than a standard one-week free trial. You will need to go to a special web page on the Disney Plus website and enter the code for a free trial. This is only for new members of Disney Plus, by the way. In addition, Delta passengers will be able to watch selected Disney Plus content in their in-flight entertainment system. Time to get those popcorn ready for some movie marathon as Hulu can now be installed on your Android device. Yes, you're reading this right, tons of TV shows and movies are now right at your fingertips. Hulu, which was made to run on an Android device thanks to a developer who goes by the name bluntdedsmurf. The catch that you should have a Hulu account to access Hulu plus plus otherwise you will have to agree to a free gallery. The setting itself is free and you don't even have to root your device to do so. Hulu has been a very popular streaming service, and now that you can work on Android, it just gives you more flexibility about how you want to view your media, at home or beyond. Hulu offers lots of movies and on-demand TV shows that it sure beats having to carry your portable CDs to watch your favorite movies. The developer who made the settings offers two versions of it, one for conventional Android devices and the other for landscape-only devices such as the Motorola Xoom LTE and Logitech Revue. When the original Raspberry Pi was released in 2012 it launched a whole movement of hobbyists, developers and educators who used the platform to create, hack and teach. Raspberry Pi succeeded for three important reasons. First, it was a full computer on a small board, it had a desktop and you could write computer programs on it; Second, it had a set of GPIO pins similar to those found on microcontroller platforms like Arduino; Third, it only cost \$35. Three years after the initial launch, the Raspberry Pi Foundation considered the issue of performance by releasing the Raspberry Pi 2. If there was one complaint about Pi, it is about its overall performance when launching desktop applications. Now, three years after the initial launch, the Raspberry Pi Foundation has addressed the issue of performance by releasing the Raspberry Pi 2. It has a quad-core processor and double the RAM. Raspberry Pi 1 ordered the Raspberry Pi 2 just a few days after launch and since its arrival I have been taking it through its paces and that's what I learned. Raspberry Pi is not the only SBC on the market today and in terms of performance and features many alternative SBCs beat the Raspberry Pi 1 quite easily. However, with the possible exception of the ODROID C1, the Raspberry Pi has always won by price. With the launch of the Pi 2, the Raspberry Pi Foundation has retained the same sweet price point, but has managed to boost the productivity of the board. Here is a detailed look at how the Raspberry Pi 2 compares to some other SBCs: Device Raspberry Pi 2 Raspberry Pi 1 HummingBoard i2eXCreator Ci20 CPU 900MHz quad-core ARM Cortex-A7 CPU from Broadcom 700MHz ARM11 Broadcom CPU 1GHz i.MX6 dual-core Cortex-A9 CPU 1.2GHz dual-core Imagination MIPS32 CPU GPU Video core IV Video core IV GC2000 PowerVR SGX540 Memory 1GB 512MB 1GB 1GB Storage SD card slot SD card slot SD card slot 8GB onboard flash, SD card slot Connectivity 4 x USB, HDMI, Ethernet, 3.5mm audio jack 4 x USB, HDMI, Ethernet, 3.5mm audio jack, infra red remote control receiver Ethernet, 802.11 b/g/n Wi-Fi, Bluetooth 4.0, 2 x USB, HDMI, 3.5mm audio jack OS Linux, Windows 10 Linux Linux, Android Connectors Camera interface (CSI), (CSI), SPI, I2C, JTAG Camera (CSI), GPIO, SPI, I2C, JTAG Camera (CSI-2), GPIO, UART, SPI, I2C, PCI-Express Gen 2, mSATA II, RTC with battery Camera backup interface (ITU645 controller), 14-pin ETAG connector, 2 x UART, GPIO, SPI, I2C, ADC Price \$35/24 \$35/24 \$110 \$65/50 Raspberry Pi 1 and Raspberry Pi 2 Like Raspberry Pi 1, Pi 2 can run various Linux distributions. The easiest way to install an OS for Pi is to use a new out-of-the-box software (NOOBS) package. This package boots Pi and then lets you choose which operating system you want to install. You can even install multiple operating systems and double downloads through the download menu. NOOBS for Pi 2 is still maturing. At the moment, it only provides Raspbian (Debian Wheezy-based Linux distribution) and OpenELEC. All other OS such as RASPBMC, Pidora and RISC OS currently only operate on RPi 1. However, things are moving fast and I expect more support for the Pi 2 will come soon. One of the big announcements that were made during the launch of RPi 2 was that Microsoft would release a version of Windows 10 that supports the Raspberry Pi 2. This Release of Windows 10 will be free through the Windows Developers program for IoT. What is not yet known is what will be included in this version. This will obviously shorten the version, but how to cut it will remain to be seen. Microsoft is looking at the emerging IoT market and the release announcement clearly says that Microsoft sees this community of developers as an amazing source of innovation for smart, connected devices that represent the basis for the next wave of computing. In other words, don't expect Microsoft to give away a free equivalent version of Windows, so you can sell your old computer and replace it with the Raspberry Pi. I can be wrong, time will tell. One of the main operating systems that RPi 2 does not support is Android. RPi 1 has not supported it, and at the moment there is no news that the situation will change with Pi 2. The Raspberry Pi Foundation does not see Android as a priority, and there seems to be some difficulty porting due to some missing drivers from Broadcom. However, all this may change. Like CuBox and HummingBoard, the Raspberry Pi 1 and 2 are the official platforms for OpenELEC. Open Embedded Linux Entertainment Center (OpenELEC) is a small Linux distribution that turns RPi 2 into a Kodi Media Center (formerly XBMC). Installing it is simple enough through NOOBS or through an image file available on the OpenELEC website. The distro boots are fast and the interface is sleek and responsive. I could use it with Yatse, XBMC/Cody Remote app without any problems. The app found RPi2 right away and I was able to control Cody easily. In terms of I checked the power of the RPi 2 processor and by playing two HD video files. Both files were encoded in H.264, the first at 4429 kbps, and the second at 15038 kbps. Both were full HD resolution. The good news is that both videos played well. There was no stuttering or artifacts, and the sound played through HDMI. The only downside was that the user interface was slow when the videos were played. Bringing up the on-screen controls to pause, stop, etc., causing the mouse to twitch and jump, however the user interface still actually worked. By comparison, the same files on CuBox played the same way as well, and the user interface remained responsive. One of the attractions of the Raspberry Pi (and actually the other SBCs) is the ability to connect the equipment (LEDs, engines, servos, sensors, etc.) directly to the board and monitor/monitor that equipment in the computer program. Pi's advantage over a microcontroller, such as Arduino Due or mbed board, is that GPIO (General Purpose Input/Output) contacts can be controlled from different programming languages, not just with C or C++. In a video review I demonstrate how a Raspberry Pi 2 can be used to flash LED. Of course, this is a very simple scheme, but it demonstrates the ability of the Raspberry Pi 2 to interact with the outside world. For those interested in getting this job done with RPi 2, here is the Python program I used: 

```
import RPi.GPIO as GPIO
GPIO.setmode(GPIO.BOARD)
GPIO.setup(7, GPIO.OUT)
while (1):
    GPIO.output(7, GPIO.HIGH)
    time.sleep(1)
    GPIO.output(7, GPIO.LOW)
    time.sleep(1)
```

The first part imports the modules needed to work with GPIO contacts and the module needed to work.) function. The next bit sets contact 7 as an output, and then the loop simply sets the contact 7 HIGH (i.e. on) and then LOW (i.e. off) with one second delay between each action. Since RPi 2 is fairly new, I need to manually update the RPi.GPIO before it will work. However, I think the latest version of Raspbian has an updated GPIO module. But for those interested, you can find more help with the RPi.GPIO update on Adafruit's How to Fix the Bug Downloading RPi.GPIO Python Library on your new Raspberry Pi 2. There is also a useful primer for the construction of the LED circuit. If you liked the Raspberry Pi 1, then you'll love the Raspberry Pi 2. The performance go from Pi 1 to Pi 2 is excellent, and the extra memory really helps desktop performance. Because the Raspberry Pi Foundation has managed to keep the price the same, that is little to complain about. Android support would have been good, but Pi has thrived so far without it, so it's not a deal breaker by any means. The promise of Windows 10 is intriguing and the current support it's cool. So, go buy Raspberry Pi 2, you won't be disappointed. Disappointed. Disappointed.
