Software Trailer Captures What's New 5.0. 28 - Fixes (new library versions, compatibility, ...) Download consists of 1 links Multiple servers deluxead / Deluxead Servers DOWNLOAD LINKS Previous version In today's article we talk about the best free rain alarm apps to install on our Android mobile iPhone, or on a PC computer. And quickly know if there are near removes where we are, both on the smartphone and PC. They are all logically based on the location where we have to provide radar data close to where we are. In addition, these data are provided by official metrological agencies, so they offer rigor to the extent that we can accept radar data and maps as reliable. ©YM, our daily activities are driven by the weather conditions that occur where we are. So it is interesting to know through the weather forecast what can happen at a given time and place. This aspect becomes increasingly important during the periods of the year when weather changes can occur for a short period of time, just as at points on the Earth's surface microclimate conditions cause veneers and landslides occur in a short period of time due to atmospheric instability. We understand then the weather and rain in this place can be very changing to make more important this type of applications about rain and time to continue our mobile, especially to be clear if we have to carry an umbrella, rain or water boots. Hello! We would like to know your opinion about the article, know how it is possible to improve it or anything you want to contribute. At the end of the content, you have a comment area. Thank you so much for your help! ☺ Type of Apps is also known as Rain Alarm, which is an English translation of relevant apps that we talk about as for Android mobile devices, iPhone or PC. Free rain warning apps on Android mobile and iPhoneIn this section we will know the most outstanding mobile apps that allow us to have warnings, notifications, alarms and rain maps in the place where we are and nearby areas. We've already seen in the previous article the best time app here and which are very related to this type of software. Thus, our mobile will act as a true meteorologist giving us warnings in the form of notifications of the presence of removals, the intensity of rain per hour, and radar maps in which we can observe how the eraser moves in the interval of time on the cartography. In addition to offering us temperature data as if it were a ambient temperature thermometer. Rain Alarm OSM Plus free - Rain Alarm APKPossibly This app is one of the most famous, allowing us to carry the weather forecast through the mobile phone in our pocket. Specifically, this is the one I installed on my Android smartphone and the truth is, I'm happy with the radar data that it offers because it fits well into what's really going on, how much time is concerned. As we said above the point that should be configured in the application itself and for which we have to give permission, so that you can access our location in real time. If you can't access our location, what's the point of such apps? This gives us an alarm as the storm approaches, near, and at a scale of intensity value. It's good for both snow or hail as it allows us to organize the planning of the day if we go outside. The data obtained from the State Meteorology Agency (AEMET) on the case of Spain.It has a free version, which is one I especially use and a premium version that offers some additional features. Custom alarm settings and widgets A indicate that I like quite a lot of the app Settings section and is that it allows us to customize a number of settings to leave it to your liking. Points that can be configured are: Background mapBums to increase the distance of units I want you to automatically take our location or choose a place to show us the data there. This can be good in case we head to a certain place and want to know in advance how time is in the area. You can activate or turn off the alarm in case we don't want you to offer us warnings for a moment. Finally, section widgets to be able to view them on Android, we have to work with the windows of the mobile desktop to be able to remove them for display. We have two different types of widgets by size, although they offer the same relevant data that: Rain proximity, expressed in kilometers. Intensity, numerical values on a scale from 1 to 10.Area, numerical values on a scale from 1 to 10.I recommend that if you are going to install this application, you can view the radar map to better understand what is going on and keeping in mind the above values. The truth is quite intuitive operation. The data presented on the home screen corresponds to the removals that may occur and which are represented by colors to determine the intensity of the rain, as you can see in the next image. This animation provides radar data every 30 minutes. This weather information can be transmitted through our social channels if we wish to inform our contacts about this data. The time AEMETThis app will be official for the State Meteorological Agency and like the previous one offers warnings about adverse weather events. We can say that this is a very complete application with the most reliable data that we can find for Spain, provinces and settlements. Graphic radar data is available to visualize the existence of erasers, anticycles and how they develop over time. It offers a lot of weather data locally because like most apps of this style they need to know about our location or the one we specify. If you want to know more about this app, you can visit the following link. It's time With a free rain warningThis is another of the free apps available to transport rain alerts on our mobile phone in addition to offering more data that can facilitate the app that offers weather such as OC temperature. It provides data for 14 days, in addition to offering it locally and allows us to add widgets to our mobile phone's home screen. It also offers weather warnings in Spain, with day-to-day notifications from various provinces and localities with a large database. As well as the installation of alarms in case of hail, storm, etc. will occur. As in the previous app, you should also know our location either by GPS or Wi-Fi to offer us personalized weather data in our location. This app can be found by clicking here on Google Play.Precipitation warnings for PCOtra ways to keep us up to date by requesting information through our PC computer. There are several formulas for this to do this, which allow us to know this data. Rain AlarmIn the first thing we can talk about is rain alarm, which is the same application that we talked about at the beginning of the article, and that is also available for our computer as an application for chrome browser. In short, you can consult with the same information as a mobile phone with a logical caveat that we are changing the device. As for the settings the same as from the app, in the same way, it is also possible to turn the alarm on/off. THE official website of AEMETIn this section is about knowing the warning of rain and orange, yellow alerts directly from the AEMET website. Where in addition to knowing this type of precipitation alarm can also consult with various weather radars, distributed España.No it's a cleanly said alarm, but we leave a marker in our browser we can quickly consult with this information. time/forecast/warnings?w=todayk-ConclusionAs we see there are different solutions to be aware of the weather conditions that occur when it comes to precipitation, hail or snow through our mobile phone or PC. Do you know any other app of this type? Which one do you like the most or which one do you usually use? Use? adidas. adobe. adele. adobe reader. adblock. adam sandler. addison rae. adriana lima
