Android is the most popular smartphone operating system. It has a huge 86% share of the global smartphone market over the past many years. The extensive user base on the Android platform has also attracted various app developers. As a result, thousands of free apps have appeared in the Google Play Store. Most of these apps display ads for monetization. Advertising helps developers maintain and earn a living. A well-optimized ad always helps in conversions and brings a better user experience. However, incorrect placement and over-optimization of ads are too annoying and intrusive. This hinders the overall experience. Some Chinese OEMs also display banners advertising for revenue and bridge profits. Xiaomi is a great example after the same tactics to get some benefits. There are many other ways in which developers enter ads and impair the overall user experience. This is the only reason that makes users block unnecessary advertising. However, some developers offer a premium version of their apps without advertising, but still many users prefer the free version. There are many ways to remove system ads on Android, but most of them need root access. Those who claim to block without root are either not effective or drain the battery. To give you a breather, we came across an app that allows users to block ads on your smartphone completely. It even gives you the ability to switch ads on different apps. The app called DNS66 is an Android app developed by Julian Claudet, it blocks advertising at the DNS level. It is effective because it does not slow down the device. It's better than any other VPN blocker and is much more efficient because it doesn't drain the battery. The new app even saves bandwidth. However, there are many similar applications such as Netguard, AdGuard, No Root Ad Blocker, and others. Unlike its competitors, the Klode ad-blocking app is open source and free. Note: GizmoChina does not support ad blocking because it is the only source of revenue for publishers and developers. GizmoChina does not approve of the removal of advertising. People need to show some love to the developers and publishers who work to bring useful information and entertainment to them. Requirements: Download the DNS66 app Android 5.0 device you need to authorize the smartphone to install applications from unknown sources. Steps: Block System-Wide ads on Android Follow the steps below carefully to get rid of annoying ads on your smartphone without root. smartphone to install applications from third-party sources by enabling the installation of Unknown Sources. You can migrate to the settings and then turn it on. Download the APK from above and install it on your smartphone. Once done with the installation, open the app and the 'Get Started' guide will pop up to do Functions. The start screen will allow you to choose the Resume the System Start option. Note: The DNS66 application will affect the battery at the beginning, but once it is fully running with optimal settings, there will be no significant battery leakage. The user can easily filter and block selected ads. The app contains a 'Hosts' tab that lets hosts filter. The user can switch each ad host by transmitting data through your device. Once you've updated the host tab, you'll get a full list of ad hosts serving ads on your device. You can refuse or allow access to each host. Once you're done with a choice of hosts, check back to the app home. In home or Start, the user can quickly initiate a VPN connection to block ads by clicking the Start button at the bottom of the page. The DNS66 app also has the ability to bypass the selected ad app. This is a feature that allows the user to include ads in apps that don't affect the user experience. The user can easily turn the service on or off from the notification bar. The app will show a small key icon on the notification bar while the service is running. This is the most logical, effective and effective way to block advertising in the Android system. Steps to block ads on Android without any app can easily block ads on any Android device without installing any app on your smartphone. It's really to block unnecessary ads from your device by following the following points: Open device settings or more private DNS connectivity settings. Click on the host option for a private DNS provider. Now you can choose any of all of these DNS options to get protection from a certain type of ad: - dns.adguard.com-dns-family.adguard.com (To block adult sites) - dot-de.blahdns.com (a small hobby project with AdBlock) After entering the appropriate DNS in the box, Click Save. Now you can enjoy watching without advertising. For Chrome users, there's an extra step to turn off #enable-async-dns going into chrome://flags. Xiaomi users also need to take the extra step to enable private DNS. (Note: The private DNS setting is disabled on MIUI 10 devices. These are several methods for eliminating ads on your Android device without affecting battery life. If you have any other option, let us know as well.
