If you're not a fan of Windows 8, but want a new laptop that comes with Windows 8 pre-installed, you'll be glad to know that you can actually downgrade it to Windows 7 without having to reformat. Here's how it's done. Dear Lifehacker, Windows 8 is coming out and it's everyone who talks about-except all just keeps... Read moreMaybe you gave Windows 8 a fair shake and it just doesn't work for you, or maybe you're so against the upgrade that you don't want to buy a new computer until you know you can downgrade. Whatever your reasons, you may actually have a way out. Some Windows 8 PCs have so-called downgrade rights. If your computer comes with Windows 8 Pro, you can downgrade to Windows 7 Pro by simply installing it on top of your existing OS. You'll need a legitimate drive and product key, but you can just use the old or used one - after installing, you can call Microsoft and they activate your downgrade for you. You can even lower a few machines with the same CD and key. Not all computers come with downgrade rights, so be sure to do a bit of research before you try it or buy a new Windows 8 computer. It can be a bit of a hassle, but it's a good option if you really want to keep using Windows 7. Hit the link to see the full step-by-step process. Understanding microsoft's downgrade rights through How-To Geek Your Android should keep you instantly connected to your digital life. He can do it, but he needs help. These best-in-class apps make sending files, synchronizing music, sharing websites and other phone-computer connections much easier. Two-Way Tools: Android on desktop for AndroidFilesEven, although Android allows removable SD card storage, and is much more open than the iPhone when it comes to storing files, very few people carry USB cable or micro-SD converter cards everywhere they go. They also shouldn't, since these apps make it easier to send files and ideas between two different screen sizes. After installing Dropbox on a variety of portable and desktop systems and then adding an Android app to your phone, you'll sometimes wonder why USB cables still exist. Just place the file in the Dropbox folder (or elsewhere in your system) and it will appear on your phone. Dropbox on Android also comes with built-in processors for PDFs, audio and video files, text and text documents and several other files. You can also send Dropbox files to other apps on your phone, or click and hold a file to store it on your SD card. The popular cross-platform file syncosynchronization app Dropbox is among The Lifehacker readers, but ... MoreDropbox on Android offers you all kinds of creation options, as well as tools for sending files from your phone to desktop computers. You can make a text file, instantly snap an image or video, record audio notes, or download any file on your SD card, and it all ends with synchronization synchronization back to the desktop. So when someone says: Hey, I bet you can't print at home with your Android, you go ahead and prove them wrong. Or just grab a picture of what your spouse loved for Christmas, anyway. (Home) (AppBrain) No, no, no. Technology as blogger Amit Agarwal details how to combine a Dropbox account and a simple script... Read more about the alternative: SugarSync SugarSync offers the same 2GB feature for free, sync anywhere like Dropbox, but it differentiates itself in its options. There's no single folder you have to throw everything in; You choose which desktop/portable files are synchronized between your systems. If you only care about getting Word documents and PDF backup files, you can set it up. This is a strong alternative with a good Android customer. (Home) (AppBrain) No, no, no. Notes, URLs, phone numbers and other small bits of data when an idea hits you, or someone wants you to remember something, you should be able to save it using any computer you have conveniently and then see it, in real time, on any other computer. These tools make it so. Simplenote/mNote We praised Simplenote as the holy grail of the ubiquitous simple text capture; mNote syncs Simplenote accounts between your account and your Android phone. mNote updates to the user schedule (or you can force an immediate update), you can add and delete notes, and you can customize how many note you see (only heading or up to 9 lines of preview from the note). The interface is very simple and the possibilities are limited, but in this case it is hardly a criticism, given that no-frills text editing is a draw simplenote. (AppBrain) No, no, no. Despite all the cool performance modern technology was born, the holy grail for me... More Thannote We sang the praises of Evernote over and over again as a great mobile tool taking note, and one of the reasons is its availability on all platforms. From the mobile app, you can quickly add text, photo, and voice notes, and immediately sync them with the desktop app for further transcription and organization. Similarly, you can create any note on your desktop client and access it on the go from the easily searchable Evernote database. No matter where you are, Evernote keeps everything you need to remember at hand. (Home) (AppBrain) No, no, no. Last week we asked you to share your favorite mobile note tool and then we rounded... Read More MaterialA friend tweets great blog you want to dig into, or you dig into the ebook you Read. Hide reading for your big screen with these tools. Read later (Instapaper) and PaperDroid (Read later) How to Instapaper and Read later grab articles, strip them down to their barest picture/text essence, and make them available where you have access to the Internet. We have put two services head to head, but depending on the reading app you like more, more, got an Android app that can send browser pages to it. PaperDroid actually keeps a standalone reading list on your phone, while Read Later is embedded in the Share menu to send articles; You will need to browse the Instapaper website to read your stuff on your phone. Read later (AppBrain) PaperDroid (AppBrain) You click through a lot while watching that you don't have time to read now, but plan later.... Read moreKindleLike it does on every platform, Kindle for Android quietly grabs your Amazon ebook purchases, brings them to your car, and saves bookmarks, highlights and notes, and the page you're left on as you read. (Home) (AppBrain) No, no, no. One-Way Tools: Desktop to AndroidRemote Control and Screen Viewingit may seem like a niche event, but some Android apps are pretty deep, and their use or at least setting them up can be more convenient with your full keyboard and mouse. AndroidScreencast Unlike some dead simple apps, using AndroidScreencast is not a two-click deal. It is, however, a great tool for viewing, controlling and recording your Android phone from the comfort of your desktop. You will need to install an Android SDK Manager to use AndroidScreencast and then download the AndroidScreencast Java app here-Java Runtime Environment 5 required. Connect your phone, run the java app, and you'll see something similar to the screenshot above. Most of the keystrokes and mouse commands are well transmitted from the computer to the Android interface - the scroll wheel even works on long documents and web pages. AndroidScreencast requires a root phone for full functionality, non-root phones can view and record, but not interact with the Android interface. (Home) App Synchronization and Instant InstallationUntil Android Market Updates (due in November, presumably), installing and deleting apps in bulk, or even one at a time, is a search, hope, and then click four times the case. Not so with this great utility. AppBrain and Fast Web Installer From a purely convenience point of view, it's hard to beat AppBrain and its fellow app, Fast Web Installer. Go to the AppBrain web market, log in through your Google account, and then search for an app you've heard about or encountered. Click Set, and seconds later, the app shines directly on the phone and installs as soon as it is loaded. You can also select several apps in AppBrain to sync with your phone the next time you open your app on your phone, and maintain lists of apps to recommend to friends. It is also the most manual tool for mass removal. (Home) (AppBrain) Fast Web Installer Web pages, Places maps, and TextWhen you're heading outside the door, or you need to look at something you can't pull up on your phone, hit those tools. Chrome for Phone and Fox for Phonell's easier to search websites and maps places in your full-size computer browser, and much easier to make easier copy the text block even if you really need the data on your phone. Install Chrome on your phone, or its colleague Firefox Fox on your phone, in your browser, and shining those pages and snippets onto your phone is a one or two clicks process. Both work through Chrome on the Android phone app on your phone, which you will only need to link once to your Google account. After that, it's a pretty quick route from desktop to pocket. Chrome on the phone (Chrome extension) Fox to the phone (Firefox extension) AppBrain (Android app) FilesAs with pulling files from Android, tools as it is often easier than manual methods. In this case, in fact, it's a dead simple. Awesome Drop/16 DropBox is the king for keeping a large number of your files synced and available on different platforms. For the absolutely dead simple transfer of files from your computer to your Android phone, however, there is no special desktop software or registration required-Awesome Drop, well, awesome. Install Awesome Drop on your Android phone then visit the Awesome Drop web interface to get a random PIN. Connect this random pin to the Awesome Drop App on your phone and a temporary link is formed between the Awesome Drop web interface and your phone. Any files you drag and fall onto the web interface are transferred to your phone. Despite the brevity of this description it still does not pay tribute to how dead the simple process is. Watch the video above to see it in action. The homepage of AppBrainiTunes Library For some people, iTunes is the only music manager there or at least the only media manager they are seriously associated with. Get some iTunes-to-Android stream going with this helper.iSyncAny Android phone will allow you to drag and drop music files on their SD card for use in an Android music player, but most people prefer to sync their device with their desktop media player. While apps such as DoubleTwist, MediaMonkey and Songbird already provide pretty good synchronization capabilities, the ever-popular iTunes doesn't. To do this, there is previously mentioned iSync.Android: DoubleTwist already allows you to sync music, photos and videos from computers on Android ... Read moreiSyncr comes as an Android app complete with a PC or Mac app installed on your phone's SD card. All you have to do is connect your phone, light up the desktop app, and choose which playlists to sync with. It will not only sync your music, but also iTunes' album art, ratings and play counts. And as if that wasn't enough, PC users can even sync their music Wi-Fi with a simple add-on. This is the easiest way to get your iTunes tracks synced with your phone, hands down. (Home) (AppBrain) No, no, no. Tools one-way: Android to DesktopSMS, phone calls, and more When you work on your desk, you should be able to be at your desk, on your computer, running. Having your phone blipping you constantly with email, SMS and other notifications doubles on electronic email Send phone questions to your desktop to get your attention back, and give your Android a break. TalkMyPhone While smartphones give you access to things you normally need a computer for (such as email), SMS messages and phone calls are still phone-oriented. No one likes to type on this little keyboard if they don't have too, though, so you can move those interactions to your computer with TalkMyPhone. TalkMyPhone sends you notifications about incoming SMS messages, phone calls, and battery conditions through Jabber. You can also reply to these messages (as well as send TEXT messages to any of your other contacts) directly from the chat window. Check out our instructions on how to set it up here. (Home) (AppBrain) No, no, no. Android: If you're tired of typing SMS messages on a tiny Android keyboard, sitting right... Read moreWeb PagesPeople to tell you about great sites all the time and you will sometimes find just what you are looking for on your phone. You can email yourself a link, or save yourself a problem and half the time with this handy tool. Android2CloudBrowsing on your phone is useful, but it's not exactly fun. If you're browsing the web page on the go and want to move your web page to your computer for further reading, Android2Cloud is the perfect solution. Simply install the app from the market and the associated Chrome extension. When this encourages you to set up an account, just use your Gmail address and follow the steps to give Android2Cloud access to your account. Now that you want to send a page from your phone to your computer, just hit the menus over the Share Page, and choose Android2Cloud. Hit the extension button in Chrome, and Android2Cloud will bring up the page you've read. Note that I've found that setting up an account with a mirror server works better than an overloaded official server. Simply enter the address of that server in the Server box at the beginning of the account adjustment process and use the modified Chrome extension on this page instead of the address on the download page. (Home) (AppBrain) No, no, no. FilesIf you don't have a USB cable or SD card reader at hand, here's how to throw files from your Android onto any computer. WiFi File Explorer WiFi File Explorer turns your SD card into the root of the basic web file server. Start the app and bring your web browser to the URL of the local network it provides. There you can browse and download files as if the phone was directly tied to your computer in front of you-comfortably for those times your phone is happily charging upstairs and you really want to access the file from your laptop in your office. Upgrade to adds to the ability to upload files to the SD card, delete them, copy them and zip them up. (Free, Premium \$1.10) (Home) (AppBrain) No, no, no. These are the apps that our authorities say is that the path of least resistance between a full computer and Android. What tools do you use every day to sync your double double Life? Life?
