That's exactly why we'll cover the basics when it comes to ukes, see the best electrical ukulele options out there, as well as the electric ukulele reviews we wrote after testing them. Whether you're looking for the best acoustic electric ukulele or just want to learn more about this small but amazing instrument, let's start! Best Electric Ukulele: What to look for Before we dive into the world of the best electric ukulele brands and models on the market, you should first get to know the instrument. You can ask: What is the best electric ukulele to buy?. To understand the specifications and features of different options, you need to know exactly what you're looking for. Our top picks for the best electric and acoustic-electric Ukuleles different sizes of Ukulele as opposed to guitars, which, although there are several different sizes, are quite standardized, ukes come in 4 different sizes. Depending on the size of the musicians, mainly their hands, the main purpose of the instrument and the sound you want from your uka, you can choose from these 4 types: Soprano (Standard) Soprano type is the oldest type of ukulele. It is the smallest member of the family, with a total length of about 21 inches. Due to its compact and lightweight design, it is perfect for smaller musicians and children who want to engage in music. It's definitely the go-to option for anyone looking for an instrument to take with their friends. Since it is significantly smaller than other types, the 13-inch scale may seem too small for anyone who switches from acoustic guitar, but after a while getting used to it, it is very fun and easy to play. Sound also differs and can be described as bright. When you think of the sound of the ukulele, you mean the soprano. Concert on, we have a type of concert. It's a little bigger than the soprano mentioned earlier and definitely offers a different feeling. Concert ukes typically has a 23-inch body and a 15-inch scale. Although this may not seem like a big difference, it gives this guy several advantages. With a slightly larger scale, you'll be able to adapt faster and easier. Although not as compact as a soprano, the uka concert is small enough to carry. As far as sound is concerned, higher resonance makes for a richer low end and a higher volume level. It still has that authentic ukulele sound, but with a smoother bass flavor and a stronger overall presence. Tenor Tenor type has a total length of about 26 inches and a 17-inch scale. If you have experience Playing acoustic guitar, you should have no problem handling this instrument. Having more room to manoeuvre your fingers makes it very comfortable and easy to play with, especially if you have slightly larger hands. As expected, a larger body gives you the ability to produce a very resonant and deep sound. Although it strays slightly from the classic bright sound of the soprano, the tenor ukulele type is an interesting instrument for experimentation. Baritone and finally, the greatest of them all, the baritone. With a huge body (at least worldwide ukes) at about 30 inches in length, the baritone offers a unique musical experience. The 19-inch scale almost feels like you're playing guitar, but with a nice twist in sound. Since adjusting the baritone ukulele is the same as the guitar (the four highest guitar strings), you can simply pick up one and start playing at what point. Offering a very deep but warm sound, the baritone pairs nicely with other uke types as well as acoustic guitars and similar instruments. Ukulele Tuning Options While you could adjust your ukulele in almost any way you can get to, there are certain standards that are important for you to know. Soprano, Concert and Tenor ukes are usually tuned like this: G C E A. Baritone ukes, on the other hand, have a different tuning: D G B E, like the four highest strings on guitar. A popular alternative tuning is A D F#B, often used on soprano and concert ukes, as it gives them an extra slight sound while fretting chords is still pretty easy. It is important to keep these tweaks in mind, as different string packages are made for different tweaks. Build Types When it comes to types of construction, you can think of ukes simply as small guitars. Electric guitars come as a hollow body or a solid body. The same goes for electrical ukes. While some people call them electric ukes, there is one important thing to note. Acoustic-electric ukuleles are built more like standard, acoustic ukuleles, but have a built-in pickup and some electronics so they could be attached to the amplifier. Electric ukuleles look like a small version of an electric guitar. They have a solid body and pickups that are on the outside. While these two terms can be confusing at first, it's important to know what you're looking for. But what's the difference between a hollow and a solid body of an uca? Hollow body ukuleles will perform and sound just like regular, acoustic uke. You can play them with, or without amplifiers, and it will still sound awesome. Solid ukulele bodies, on the other hand, need an amplifier to deliver sound. Although they are tougher and tougher than hollow bodily ones, you can't just pick one up and play it without an amplifier. The sound also differs, because the wood is solid and does not resonate as well as the hollow body. They are mostly used when playing alongside the band, as they can deliver more volume and profit. At the end of the day, it's up to you. Do you want a more versatile but fragile instrument, or one for which you need accessories but can take a hit? Tonewood Choice Materials used in the production of ukulele have a huge impact on the different components of its performance. Both the body and the fretboard should feel beautiful to the touch. While different finishes can change the feel of wood, you can still tell the difference. Then the whole instrument should feel firm and tight. It is difficult to balance good sound and durability. And finally, but probably most importantly, sound. Although solid body instruments do not depend on the choice of tonewood as much as hollow bodily, tonewood is called that because it greatly affects sound and tone. Let's look at some of the most commonly used types of wood when it comes to ukes: Mahogany – Due to the different varieties of this type of wood used around the world, mahogany can contribute to different types of sound. Generally speaking, it is best described as a sound warm and a little darker than other species. Cedar – If you want more than that low end, cedar is the way to go. Although it is considered a softer type of wood tone, it is still quite durable. The sound it provides is very sweet, round and bland, perfect for tenor and baritone ukes, as well as smaller than a bunch. Spruce - Although generally used for guitar tops, spruce is a great option for ukes as well. Unlike cedar, spruce makes the higher end of the range stand out quite nicely. It complements the bright sound of soprano ukuleles, but may turn out to be an interesting choice for baritone ukes as well. Redwood – Sound-wise, the redwood lands somewhere in the middle, between spruce and cedar. Clarity combined with a warm low end can give your instrument a very versatile and interesting sound. However, secliques are scarce today, so it can be quite expensive. Koa – As a tropical tree native to Hawaii, it is the most popular choice for authentic Hawaiian ukulele. The sound is very well balanced and resonates with an old-fashioned uke vibe. In addition to the types of wood that we have mentioned so far, there are many other choices. The most important thing to keep in mind when choosing tonewood is the sound you would like your uke to have. If you're still not sure, there are loads of videos online that show the difference between different tonewood choices that may come in handy. How much money should I spend? Generally speaking, the more money you invest in the instrument, the better the overall experience, both quality and audible. However, there are loads of models out there with ridiculously high prices. If you are a beginner, it is more than ok to get a relatively inexpensive electric ukulele. As a more advanced musician, you probably have at least rough what you're looking for.
