The Iranian Journal of Pediatric Neurology welcomes clinical investigative articles from around the world. Documents submitted to the journal should not be published or reviewed/submitted for publication elsewhere. The manuscript should be an original word (clinical or research) or a thorough review by an authoritative person in the relevant field. The Iranian Journal of Pediatric Neurology is the official scientific quarterly edition of Shahid Beheshti Medical University. This journal takes original documents, review articles, reports on cases in the fields of neurology, pediatric neurology, child psychiatry, neurology, neuro-pharmacology, neuro-imaging, physical medicine, physiotherapy, occupational therapy, speech therapy and neuro-delayed development. The material should be presented in short, interesting and well-thought-out sentences and paragraphs. Common names instead of trade names should be used for medicines, and only standard acronyms can be used. Manuscripts must be filed double with appropriate subtitles used to refer to different sections in the following order: front page, abstract, text, links, tables and legends of figures. Papers must be typed in a two-seater letter quality font (not a matrix point) on 21 by 29.7 cm (A4) paper with a stock of at least 2 cm and the original must be sent along with three clean copies. The length should not exceed 12 double-occupancies on the machine-pages with 6 illustrations. A copy of the article containing all the numbers, tables and photos must be sent by the Electronic mail: IJCNjournal@sbmu.ac.ir and with the document in order for it to be reviewed for publication. The document must be prepared using Microsoft Word. In the case of the manuscript's e-mail, the author must state that it is solely a contribution to the Iranian Journal of Pediatric Neurology. The text must be presented in Microsoft Word format as an app. The numbers must be sent in JPEG or GIF format, which will produce high-quality images in the online edition of the magazine. An online view is also acceptable through the URL of the magazine: sbmu.ac.ir/ijcn Before submitting a manuscript on which authors who are not English are written, must be edited for correct spelling, grammar and syntax by a professional editor or colleague who is a native English speaker. The manuscript should include: Title page, Abstract, Introduction, Material and Methods, Results, Discussion, Recognition and Links. Page Title: The title should be concise and meaningful. After the title, there will be a list of the first and surnames of all authors, along with the highest academic or medical degree and affiliation. Authorship should be limited to direct participants (technical assistance be recognized as a footnote). A separate item should determine where the work was done if grant or otherwise, and a meeting, if any, on which the material was presented. List the full name, address, phone number and fax, as well as the authors' email address. Study Articles: Abstract: A structured abstract of no more than 250 words should be presented on a separate page and should be factual, presenting (cause of study) Goals, Materials and Methods, Results and Conclusions, and then 3-5 Keywords. Keywords will help indexers the article because they are published in the abstract. Use terms from the Index Medicus (MeSH) (http://www.nlm.nih.gov/medsh/). Authors should be careful that the abstract accurately reflects the content of the article. Text: The text of the article should have the following sequence: Introduction, Materials (or topics) and methods, results, discussion and references; should follow the usual format of scientific articles. The pages of manuscripts must be measured sequentially. Avoid using all abbreviations unless the abbreviation itself (such as DNA) is more familiar to readers than the words it replaces. Only generic drug names should be used. Introduction: This should be a brief overview of the literature presented in the article. This should summarize the purpose and justification for the study. It should not address the issue in detail and should not have the data or conclusions of the study. Materials and methods should be written so that other investigators can duplicate them easily and in detail. This should include an accurate method or observation or experiment. When using the device, the name and address of its manufacturer should be given in brackets. If the method is installed, give a link, but if the method is new, give enough information so that the other author can execute it. If the drug is used, its general name, dose and route of administration should be given. The statistical method should be mentioned and specify any common computer program used. The information used should be clearly mentioned. The results should be written in detail to provide a complete analysis. Long articles may need subtitles in some sections (especially the results and discussion portions) to clarify their contents. The discussion should be relevant to the result, but not too repetitive. The current findings and differences or similarities with other work done by other field workers should be emphasized. Details should not be repeated in the discussion again. Highlight the new and important aspects of the study and the conclusions that follow. It should be noted whether the hypothesis mentioned in the article is true, false or not a conclusion can be obtained. Recognition of all participants who do not meet the criteria should be covered in the confirmation section. It should include persons who provide technical assistance, assistance in writing a letter, and the head of the department, who provided only general support. Financial and material support should also be recognized. Interesting reports on the case will be considered; they should be concise and consist only of relevant issues. Such documents should be in the following sequence: Abstract, Introduction, case report, discussion and references. The review of articles is taken from an authoritative person with experience (about 10 years) in the presented area. This section should be informative, presenting the latest achievements and comprehensive coverage of what can be easily found in textbooks. The abstract does not need to be structured in the review article. The journal will only look at unsolicited review articles from authors with significant research experience in this area. Tables: There should be up to 6 tables laid out as simple as possible and there should be no repetition of the information already mentioned in the text. Each should be on a separate glossy sheet of paper and unruled. Don't betray the tables as a photo. Place explanatory questions in footnotes, not in the title. Tables should be measured sequentially, corresponding to the quote from the text. Also, each table should be prepared in MSWord on a separate page and preferably should be no more than one page. Include a short descriptive table title. All tables should be specifically mentioned in the text and moderated in order to appear in the text. Illustration: Photos should be presented in glossy prints no more than 17 by 11 cm and the name (s) of the authors should be written on the back of all the illustrations in pencil. Patients should not be recognizable in the illustration unless written consent is provided with the manuscript. Legends must be typed on a double on a separate sheet of paper and references to illustrations must be specified in the text. Figures: you need to take care of the preparation of numbers, including legends and explanatory names. Technical excellence is essential. The photos must be presented as electronic files stored in the TIF or .jpg formats. Black and white or gray scale shapes (photo, image or drawing line) are preferred and the resolution must be high quality for printing (not screen resolution). Each digit must have a minimum width of 2,100 pixels (3.5 inches or 9 cm at 600 dpi). All labels or arrows must be clear, and internal markers should be displayed on electronic photo-micrographs. Recognizable photos of patients must be accompanied by a written permission to publish. Written permission must be included by both the author and the publisher to reproduce any previously published Legends of drawings should be written in font and grouped on a separate page, with numbers corresponding to the themes on the drawing files themselves. All figures should be specifically mentioned in the text and moderated in order to appear in the text. The abbreviations appearing in the illustrations must be defined in the legend. The graphics must be presented as file figures and must be finished drawing without requiring further art. Drawing lines can be produced as PowerPoint, MSWord or Adobe Illustrator files without embedded images from other sources. Links: At least thirty references from magazines must be quoted in the text in numerically consistent order and correspond to the Index Medicus style, i.e. names, initials, article title, magazine title, volume number, pages (first and last page numbers), and copy date. All links must be after 2000 years, old links should only be used in a special situation that may not be possible for the editor and reviewers to check the accuracy of all links. To minimize such errors, the author should check the links to the original documents. With the manuscript, send a photocopy of the first page of each article. The reference section should follow the following guidelines: the first six authors; The co-authors can then be listed, following this title, the title of the magazine, the issue and related pages, i.e. the first and last pages (e.g. 1 below) must be given. Example: 1.Parkin DM, Clayton D, Black RL, Masuyer E, Friedle HP, Haver E, et al. Childhood leukemia in Europe after Chernobyl? 5 years follow-up. Br J Cancer 1996;73:1006-12. 2. Shen HM, Chang SF. Assessment of the risk of carcinogenicity of nickel and professional lung cancer. Environ Health Perspect 1996;102 suppl 1:275-82. (For the magazine app) 3.Ryder TE, Haukebrand EA, Soltau J, Bilateral infraorbital Seneurpur hostidigere risk vyene, Tidskr Nor Laegerforen 1996; 102 suppl 1:275-82. (For non-English magazines) Links from books must use the following sequence: The name of the section editor (if given), the initials, the title of the book, the publisher and the city pages (first and last page numbers), and the date of copyright. Example: 1.Swaiman KF, Ashwal S, Friero DM, Sonor NF, Finkel RS, Grozman AL, et. Swaiman Pediatric Neurology, Principles and Practices, Sixth Edition, 2017. Elsevier Inc. 2. Parich S, Goldstein A, Koenig MK, Scaglia F, Enns GM, Saneto R et al. Diagnosis and Management of Mitochondrial Disease: a consensus statement of the Society of Mitochondrial Medicine. Genet Med 2015; 17(9): 869-701. The publication of manuscripts in this journal is free. Those manuscripts accepted by the appropriate author must pay a fee for editing the editor of our magazine to publish the article. Articles that have media and approved by the Iranian Journal of Pediatric Neurology Office, for publication do not need this payment. Proof of Reading: The computer print is sent to the relevant author for proof of reading before publication to avoid any errors. The fees should be clearly marked and immediately sent to the magazine's office. Abbreviations and Symbols: Use only standard acronyms. Avoid using them in titles and abstract. The full term during which the abbreviation is worth should be continued to be used first in the text, unless it is the standard unit in the measurement. Ethical Principles: Ethical considerations should be considered in the Materials and Methods section. 1) Please leave that informed consent has been obtained from all adult participants, as well as from parents or legal guardians of minors, include the name of the relevant institutional review board that approved the project. 2) Indicate in the text that the content and care of experimental animals complies with national institutes of health guidelines for human use of laboratory animals, or those from your institute or agency. Conflict of interest: Authors must recognize and declare any sources of funding and potential conflicting interests, such as receiving funds or fees or holding shares and shares in an organization that may make a profit or lose out as a result of the publication of your paper. Declaring competing interests will not automatically abandon the document, but we would like to be aware of it. Conflict of interest issues should be addressed to the editor-in-chief, pkarimzadeh@sbmu.ac.ir. There is no charge for publication in this journal. Copyright: All contents of the Iranian Journal of Pediatric Neurology are protected by international copyright. This magazine is for your personal non-commercial use. You may not alter a copy, distribute, display or publish any material contained in the journal without prior written permission or the relevant copyright holder. Review process: All manuscripts are considered confidential. They are reviewed by at least three anonymous reviewers selected by the Ethics Council. The author in question is notified as soon as possible of the editor's decision to accept, reject, or request changes. If the manuscript is fully acceptable in accordance with the criteria set out in these instructions, it is scheduled for the next available release. Recycling: One published, all copies of manuscripts, correspondence and works of art will be carried out for 6 months before removal. Authors are notified of receipt of the manuscript and CD. Each article is then reviewed and scrutinized the final decision on the adoption of the article will be sent to the first author as soon as possible. Accepted/ Accepted will be carefully edited by an editorial consultant, who reserves the right to make any changes or removals necessary to make the document suitable for publication. All changes in editing can be verified and confirmed by the author in the gallery of evidence sent to the relevant author prior to publication, within a 48-hour period. The received manuscripts and compact photographs will not be returned unless the author specifically requests them and escorts them with a seal envelope. We look forward to hearing from you. All manuscripts and correspondence should be addressed: Parwane Karimzadeh MD editor-in-Chief Iranian Journal of Pediatric Neurology, Editorial of the Iranian Journal of Pediatric Neurology Mofid Children's Hospital, Shariati Ave, Tehran, 1546815514, Iran.
