With clean lines, familiar but great interface, and many technical updates, it is already the most popular version of Windows and effectively compensates for the parody that was Windows 8, apparently having taken the most disturbing features and rounded them until they have become really useful. Microsoft is back in shape with an ever-better version of Windows 10 has been with us since 2015 and in that time it has had the opportunity to help Microsoft return from the edge of the abyss. After the palliative-free disaster that was Windows 8, Microsoft seems to have done exactly what you would expect a company to do after extensive feedback, take a closer look, decide what needs to be done, and fix, improve, eliminate the most problematic aspects. What has turned out is one of the best Windows operating systems in years. From the moment you turn on Windows 10 for the first time, it looks and feels sleek and fluid. If you enable it in the initial setup process, you'll be able to sign in with your finger or biometric data, which means you can say goodbye to old-school passwords. Windows Hello also works on tablets, phones, and exercise bands running Windows 10. The Live Tiles are still present, unfortunately, but can be disabled through a slow but feasible manual process. In depth, Microsoft seems to have accepted comments that the initial version of Live Tiles was not entirely friendly to traditional keyboard and mouse users, and in this version they have made sure that while they are still present, they are much easier to use when you are not in tablet mode. Of course, if you're not a fan of voice control, you can the service so the lovely Cortana doesn't take a look. The evolution of the Windows 10 browser, Edge, is also proving interesting. Describing anything like Internet Explorer tracking isn't really fair, but Microsoft persisted and polished until Edge became... Good, good a fairly legitimate browser option. It came to iOS and Android in 2017, Mac in 2019 and now, as the default browser on Windows 10, it's actually worth taking a look, especially since it's fully integrated with Cortana. From a visual perspective, Windows 10 is possibly quite pretty. It also offers plenty of settings for advanced users, including the ability to change an individual screen in multi-monitor settings. If you're opting for the opposite pole, there's a handy tablet mode switch, so as soon as you disjooce your tablet (if it's like wheels), tablet mode will turn on automatically. It's also pleasantly fast and fluid, no matter what mode you're using, with the start being especially fast. Windows 10 also has a good relationship with other apps and platforms that you could use together. Universal apps, programs that can be used on all Windows devices, feature and are many and varied. The Microsoft App Store makes it easy to install apps, as long as you're happy to use the app store instead of downloading a standalone Windows app, and finally, if you're a player you'll like the Xbox Game Pass because it lets you play your Xbox games on any device running Windows (within reason) through the Xbox app. It's a paid service, but if you're already bombing, you'll appreciate the flexibility. In total, Windows 10 is a breath of fresh air for the Windows user. Microsoft may have stumbled in the past, but when it comes to operating systems, they seem to be firmly back on the right track. Unless you're a hardened Mac user, no! Windows 10 is the best Windows operating system that has been released in quite some time. Windows 10 was exactly what the world needed from Microsoft. It is a great operating system that is flexible, elegant and practical. Sure, hae haters are going to hate, and Mac fanboys go to fanboys, but anyone with a reasonable approach to operating systems has to realize that as they go, Windows 10 is an excellent choice. Since most people don't have a great degree of choice when it comes to operating systems, we should be very happy that within the range of what's on offer, we have Windows 10. Should I download it?
