WPS Office, formerly known as The Kingsoft Office, is an office suite that is presented as one of the most effective alternatives to Microsoft Office. If you usually prefer to work with this text editor, then getting used to WPS Office will be very easy for you because it has almost the same interface for documents, presentations and spreadsheets. Three powerful apps can be added to this new version: Kingsoft's Writer, Spreadsheets, and Presentation. These are three different tools that will meet your need to create documents, present and analyze data. The program doesn't just offer basic features that other similar apps include; It offers another exceptional feature, such as a professional PDF converter, an advanced paragraph adjustment tool, and an intuitive table operation. WPS Office, the free cross-platform Office One package lost in the software, is to get an Office set that is a free alternative compatible with Microsoft Office. WPS Office (formerly known as Kingsoft Office) is one of the best candidates for this position, offering a free-based toolkit that includes a kitchen processor, spreadsheet and presentation editor for Windows and Android. More Uptodown is currently on maintenance. We'll be back soon. Editing text, spreadsheets, and presentations with a set that can replace Microsoft's Office is a suite of performance-enhancing apps that basically bring you three main tools: a word editor, a spreadsheet processor, and a slideshow maker. These three apps have a structural design, very similar to what we see in the last two versions of Microsoft Office, so you shouldn't be surprised how much is here. First, WPS Office is kingsoft's old office. It changed its name and also changed its entire appearance, following a more closely new style of visual development of Windows. Therefore, if you've already been a user of this package before, you should notice a lot of changes. Differences, although this set is very similar to Microsoft Office, some fundamental differences are very obvious. A good example is how apps organize their windows. In fact, there is only one window and you can open and edit as many documents as you want in tabs that are available just below the program's toolbar. This organization system is very similar to what we see in web browsers such as Google Chrome, and works exactly the same way. Another key difference is the lack of our language in all WPS Office applications, both in the interface and in the dictionary for correction Sms. At the moment there is no information about a possible update to make the Portuguese available. TextThe WPS Office has a familiar look and is very similar to Microsoft Word. In this app, you can create simple text, include images, tables and other elements. However, because the program is part of the free WPS Office package, it has some limited features, such as not being able to use macros or applying some settings. In fact, the settings section is not available in any of the three programs in the set. In any case, for those who want to set up a school, academic work or just make text for any purposes, WPS Office should not offer many difficulties other than the lack of text correction. In addition, all the page customization features that can be found in Word are available. Aside from this, some shortcuts are available on the right side of the box, and can be accessed by pressing a thin blue button on the same side. SpreadsheetWith regard to spreadsheetWith regard to spreadsheet processor is very similar to Microsoft Excel and has a windowbased structure tably. In this environment, however, this system may seem strange, but it works without problems when you use multiple plans in the same document table. In addition, these three apps save files in formats that can be opened in any performance set. Traditional formats such as DOC, PPT, XLS, and the most modern ones are available; DOCX, PPTX and XLSX. The difference here is that the language doesn't really matter, as you mostly work with numbers. But if you need to do something more complex, with formulas, for example, you will need to relearn the name of all of them, as both your teams and their names are on the formula lists in English. PresentationIn the structure issue, you can already imagine that the WPS Office presentation is very similar to Microsoft PowerPoint. There are slide templates to use as possible, lots of effects and editing capabilities, just like a competitor. However, this app has a bar shortcut on the right side of the screen that expands by default, unlike the previous two apps. This way you can make a number of edits without sifting through the options in the toolbar. Other than that, when you present something, several options are available in a & Secure Latest Version: WPS Office Free 2019 11.2.0.9635 LATEST Requirements: Windows 7 / Windows 7 / Windows 8 / Windows 7 / Windows 8 / 2019 11.2.0.9629WPS Office Free 2019 11.2.0.9453WPS Office Free 2019 11.2.0.9453WPS Office Free 2019 11.2.0.9363WPS Office Free 2019 11.2.0.9363WPS Office Free 2019 11.2.0.9381WPS Office Free 2019 11.2.0.9255WPS Office Free 2019 11.2.0.9363WPS Office Fre 11.2.0.9232WPS Office Free 2019 11.2.0.9169WPS Office Free 2019 11.2.0.9150WPS Office Free 2019 11.2.0.9148WPS Office Free 2019 11.2.0.9127WPS Office Free 2019 11.2.0.9070WPS Office Free 2019 11.2.0.9031WPS Office Free 2019 11.2.0.9148WPS Office Free 2019 11.2.0.9149WPS Office Free 201 Office Free 2019 11.2.0.8668WPS Office Free 2016 11.2.0.8641WPS Office Free 2016 11.2.0.8339WPS Office Free 2016 10.2.0.7587WPS Office Free 2016 10.2.0.7516WPS Office Free 2016 10.2.0.7480View more...
