We've come a long way since boring history lectures at school, literally with hundreds of great history podcasts available for free download in your favorite podcast app. By infusing comedy, storytelling, or other attractive techniques, many history podcasts turn an otherwise dry theme into must-listen material. READ ALSO: The best podcasts you can listen to in 2020. To help you get started, we've selected 10 of our favorite history podcasts, as well as a few honorable mentions to round things up. The best history podcasts about Dan Carlin's Hardcore HistoryTopic: HistoryFrequency: IrregularLength: 1-6 hoursDan Carlin's Hardcore History podcast is probably one of the most famous podcasts on this list, and for good reason. Running since 2006, each episode is immersed deeply in a specific topic or moment in the story, with episode lengths that typically run two hours or longer. Performed only by the power of Carlin's narration without any sound effects or music, it's like listening to extremely entertaining audiobooks filled with details and ideas you won't read in any tutorial. Listen to Pocket Actors, Spotify, or Apple PodcastsRevolutionsTopic: HistoryFrequency: WeeklyLength: 30-45 minutesRevolutions is a fantastic podcast about the history of revolutions around the world. Each season centers around one revolution that allows host Mike Duncan to really dig in and cover the details. There have been 10 seasons to date, and the season of the French Revolution ran an impressive 55 episodes. If you like this one be sure to check out Duncan's previous podcast titled The Story of Rome, which ran 179 episodes and finished in 2012.Listen to Pocket Actors, Spotify, or Apple PodcastsYou's Dead to MeTopic: A Story, ComedyFrequency: IrregularLength: 45 Minutes Of You Are Dead for Me is one of the many great BBC podcasts, but don't think it's limited in England's history. In each episode, host Greg Jenner works through a specific historical theme from around the world with the help of two guests, one a comedian and the other an experienced historian. Expect to learn more about people and events from history - and have fun along the way. Listen to Pocket Actors, Spotify, or Apple Podcasts30 for 30 PodcastTopic: Sports, HistoryFrequency: IrregularLength: 30-60 MinutesThe 30 to 30 Podcast, from the creators of the acclaimed 30 to 30 documentary series from ESPN, tells the stories of some of the most fascinating and controversial sports figures in recent history. Previous installments are a combination of one-off shows and short-term series. Even if you're not a big sports fan you'll still find plenty to enjoy, from the Bikram yoga story to the shocking 1990 scandal that led to Chile's temporary ban from Cup.Listen to Pocket Actors, Spotify, or Apple PodcastsYou should remember ThisTopic: Hollywood HistoryFrequency: Weekly (seasonal)Length: 40-60 Minutes You should remember This podcast is about a kind of story you don't learn in school. Presenter Karina Longworth reveals some of the craziest stories from the lives of early Hollywood stars such as Grace Kelly and Marilyn Monroe. If you can't get enough classic movies or secretly love celebrity gossip, this is the story podcast for you. Listen to Pocket Actors, Spotify, or Apple PodcastsSlow BurnTopic: News, History, Politics Frequency: Weekly (seasonal)Length: 30-60 minutesPart-news, part of recent history, slow burn big podcast that you don't want to miss. The first two seasons are devoted to two key events in recent U.S. history: the Watergate scandal and the impeachment of Bill Clinton. Season 3, which ended in late 2019, was about a feud between rappers Tupac Shakur and The Notorious B.I.G. in the 1990s. Each season clocks in only eight episodes, making them ideal for extended binge listening. Listen to Pocket Actors, Spotify, or Apple PodcastsThe British History PodcastTopic: HistoryFrequency: IrregularLength: 20-40 MinutesThe British History Podcast is exactly what it says on Tin: a podcast about the history of England, Scotland and Wales. Presenter Jamie Jeffers keeps things interesting by focusing on the day-to-day lives of average people rather than the exploits of kings, knights and their relatives. Throw in a bunch of help snark and the result is a great podcast that will still be strong after more than eight years and 300 episodes. Listen to Pocket Actors, Spotify, or Apple PodcastsRevisionist HistoryTopic: HistoryFrequency: Weekly (Seasonal)Length: 40-50 Minutes From the Mind of New York Fellow Writer Malcolm Gladwell, Revisionist History History podcast with a twist. He picks apart preconceived notions about a wide range of topics in history, including the founding fathers of the U.S. being criminal snugglers, the ambiguity of the Second Amendment, and the decline of McDonald's French fry. Listen to Pocket Actors, Spotify, or Apple PodcastsA World History in 100 ObjectsTopic: HistoryFrequency: FinishedLength: 15 minutesIt's almost a decade ago at the moment, but there's no more iconic history podcast than BBC History World's 100 Objects. In it, the director of the British Museum Neil McGregor weaves a complex history of world history one object at a time. Episodes are also short and digestible in just 15 minutes. If you like it be sure to also check out the later 50 things that have made the modern economy, which is now in its second season. Listen to Pocket Actors, Spotify, or Apple PodcastsMore PerfectTopic: History, Law, PoliticsPart: FinishedLength: 40-60 MinutesMore Perfect spin-off podcast podcast one of the best podcasts around, Radiolab. It has the same quirky editing that the show is famous for, but the theme of this podcast is not focused on the history of the United States Supreme Court. Here you will learn more about the critical rulings of the nation's highest court, many of which still affect the lives of all Americans today. Listen to Pocket Actors, Spotify, or Apple PodcastsHonorable mentions the Palace of Memory - Nate DIMEo hosts this historical podcast that features short stories about figures and events from the past. Episodes come out irregularly, but there is a decent catalog of more than 150 episodes to work through. In Our Time: History - This long-running BBC Radio 4 podcast hosted by Melvin Bragg tackles some of the most important topics in the history of the world. Instead of storytelling, it is presented as a discussion with knowledgeable experts and scientists. Burnt Toast - Put your swords and pick up a fork for this podcast about food history and food culture. He finished his job in 2018, but there are 74 big episodes to choose from. Things You Missed in Class History - From the famous and beloved HowStuffWorks Network, hostesses Tracy Wilson and Holly Frey talk through interesting and unusual historical themes. Throughline - Throughline is a great NPR podcast that seeks to understand current events by stepping back in time and looking at past stories that have shaped today's narrative. That's it for our favorite story podcasts. Hopefully you have discovered a few great options to fill up your channel, but let's know your favorites in the comments below! In each of our eight parts for many weeks, we will track the technology, phones, people and events that have shaped Android throughout its life, bringing you a unique view of the platform used by more than a billion people. We'll see how Android has grown from a scrappy launch to a position of dominance over the mobile landscape, while pushing into new product areas like wearable devices and automotive - and how fortunes have changed in the throat-throated mobile business over the past eight years. Android didn't just happen. The origins of the world's dominant mobile operating system can be traced back to the beginning of the previous decade. In the first part of our Android History series, we look back at the early origins of the OS, the way to launch the original Android phone, the T-Mobile G1, and some of the influences that shaped the early days of Android. And we'll take a rare look at one of the early Android prototypes that have never seen the light of day. READ MORE: Android Pre-History Part 2: Android early days In our second installment, we'll be looking at the first year of Android on the market, from the launch of T-Mobile G1 in late 2008 to the first breakout successes for Android year, with comments from a leading mobile executive. We'll look at the implications of the launch of the G1, the nuts and bolts of the open source Android model and the early UI designs, as well as the partnership with Verizon that gave us Droid. READ MORE: Android in the early days Part 3: Android makes it great In the third part of our Android history series, we track the progress of Android as it makes it big in the mobile world, with devices like HTC EVO, HTC Desire and Samsung Galaxy Galaxy S sweeping the OS to a dominant position. And we'll go back to the top of Google's Nexus program, which brought a clean Google phone to consumers, straight from their Mountain View headquarters, for the first time. We will also look at the first major Android tablet, and the growing rivalry between Google and Apple in the mobile space. READ MORE: Android Makes It Big Part 4: Android Is Transformed By the end of 2010, Android has become a force to be reckoned with on smartphones. Next year will see Google's OS properly branch out into tablets with a slate-oriented (but ill-fated) Honeycomb release before the reconnection of phone and tablet branches in Ice Cream Sandwich, the biggest change for Android in its history so far. With ICS came a whole new visual style, and a stronger focus on design. And thanks to a partnership with Samsung, Android 4.0 debuted on the phone with an important technical milestone in its name. In Part 4 of the series, we explore a transformative year filled with new types of Android devices and an all-new design language. READ MORE: Android is transformed part 5: The rise of Samsung With the arrival of Android 4.0, Google OS is starting to look like a mature platform. The release of Ice Cream Sandwich has given phone and tablet manufacturers a really solid foundation to build on top, and that's exactly what we saw in 2012. In the fifth part of our series on the history of Android, we will see how Samsung began to become the dominant force in the Android space, doing battle with Apple in the process. And we'll go back to how Google has addressed some of the long-standing flaws of Android through Android 4.1 Jelly Bean and Google Play Services. A bonus interview with Steve Kondik of Cyanogen gives a unique look at the history of Android. Part 6: Jelly Bean Era of all the nicknamed versions of Android, Jelly Bean has been with us the longest. It's been an important time for Android's maturity as a platform, with Google making the OS smoother and more stable in a wide range of devices, laying the groundwork for future developments such as Android Wear. In the sixth part of the series, we'll see how stiff competition between phone manufacturers in the era of Jelly Bean has brought us some of the most unique, beautiful and capable devices yet. We'll look at how Google tried (and failed) to bring Android shares to a wider audience with the ill-fated Play editions of the program. Program. We'll return to the growth of wearable devices, including the first mass-market Android-powered smartwatch, the Samsung Galaxy Gear. READ MORE: Jelly Bean Era Part 7: Android Everywhere When You Dominate the Smartphone World and Successfully Carving Out a Niche Against Apple in Tablet Space, Where Do You Go Next? In 2014, the answer to Android was everywhere. Within twelve months, Android exploded on wearable devices, TVs (again, after the ill-fated Google TV push), cars and even Chromebooks. Android is rapidly moving from Google's mobile OS to the company's all-OS. In the seventh part of our Android history series, we'll look at how Google pushed Android to new frontiers. We'll look at the changing fortunes of the smartphone world as Samsung stumbles and LG rises. And we'll see how Lollipop and the new batch of Nexus devices have created the basis for third-age Android. READ MORE: Android Everywhere In the final (at the moment) installment of our Android History series, we explore the third age of Android. As smartphone hardware begins to plateau, we see important new mid-range stealing show and Android cameras stealing devices at the high end proving the potential of mobile photography. And in a transformative year for Google, we're looking at the company's path to being a mobile operator with Project Fi, as well as reorganizing it as part of the ABC conglomerate and New Google CEO Sundar Pichai.
