PLEASE CONTACT US BEFORE YOU CLOSE THE PURCHASE! For 5 years on the free market, we have only worked with the best in sound and lighting equipment, all ORIGINAL products and will be delivered sealed in a box! In Sao Paulo-SP, you can personally remove the product. Delivery locations: Bhutante, Vila Olampia or Vila Madalena. Consult us about shipping costs and other shipping options for your city!!! Product description: O RCF HDL30-A is a compact, two-year active system for medium and large-scale events, both indoors and outdoors. It has two 10-inch woofers and an impressive 4-inch titanium compression driver. A coherent wave guide in time is the result of research and in-depth design. The HDL 30-A is a first-line array in a composite case with a zero phase and superlineaic amplitude. The 2200 watt built-in D amplifier provides excellent clarity of play and up to 137 maximum SPL decibels. The RCF HDL30-A features the best RCF previews with neodept magnets. Given its acoustic power, it has a surprisingly low weight for easy handling. Two-track amplifier 2200W-137 dB Max SPL- 48 kHz, 32-bit DSP-1.4 titanium compression driver, 4.0 voice coil- 2 x 10 Neodymiumfers, 2.5 voice coil- Exclusive on-board FiRPHASE - RDNet Control and Control- 680 Hz Crossover PointFrequency Response -3 dB 50 Hz ÷ 20000 HzMax SPL 137 dBHorizontal Angle Coverage 100 Vertical Angle Coverage 15 Press Driver 1.4 Neo, 4.0 v.c Woofer 2x10 neo, 2.5 v.c.Input Signal Ball /unbalXRL Men's Entrance Connectors, RDNETInput Sensitivity No 4 dBuTotal Power 1100 W RMSHigh frequency 300 W RMSFrequencies Low 800 W RMSWidth 705 / 27.76 mm / inchDepth 502 / 19.76 mm / inchNet Weight 25 / 55.11 kg / lbs This listing 2200W Two Ways Amplifier 137 dB Max SPL 48 kHz, 32 bits DSP processing 1.4 Titan grip driver, 4.0 voice coil Exclusive FiRPHASE technology on board RDNet control and control 680 Hz crossover Point RCF HDL 30-A is a compact two-amp 2-amp active tourist system for medium and medium events, both indoors and outdoors. It has two 10-inch woofers and an impressive 4-inch titanium compression driver. The time-coordinated wave is the result of in-depth research and design. The HDL30-A is the first array line in a composite cabinet with a zero phase and superlinean reaction amplitude. The 2,200 watt built-in D amplifier provides excellent clarity and up to 137 SPL max decibels. RCF HDL30 -A has a state-of-the-art RCF preview with neodeible magnets. Given its acoustic power, it has a surprisingly low weight for easy handling and flight. Perfeito para refor'o de som ao vivo e situa'es instaladas confi'viis. Active Two-Way Line Array Module THE RCF HDL30-A presents it with a compact two-amp 2 active touring system for medium and large events, both indoors and outdoors. It has two 10-inch woofers and an impressive 4-inch titanium compression driver. The time-coordinated wave is the result of in-depth research and design. The HDL 30-A is the first array line in a composite cabinet with a zero phase and superlinean reaction amplitude. The 2,200 watt built-in D amplifier provides excellent clarity and up to 137 SPL max decibels. RCF HDL30 -A is equipped with state-of-the-way RCF predcators with neodept magnets. Given its acoustic power, it has a surprisingly low weight for easy handling and flight. The HDL 30-A is an incredible achievement for RCF. Ultra compact and lightweight system with top of the class rigging and excellent sound. RCF HDL30-A is equipped with state-of-the-way RCF predcators with neodept magnets. RCF's experienced engineering teams have specifically designed and compared each component, from power through the entrance board to amplifiers and precursors to the full HDL-30A system. All parts are designed and manufactured by RCF. 4 Path Waveguide Custom 4 PATH designed waveguide allows accurate coverage of 100 x 15 degrees, and also provides an excellent, linear high-frequency response. The unique shape of the four ducts forming the guide ledge creates an ideal isophazive load from 680 Hz to the highest sound frequencies. D RCF power amplifier technology packs tremendous performance, working with high efficiency, into an easy solution. HDL amplifiers provide superfast attack, a realistic transitional response and Sound performance. Amplifier Solid aluminum design, which not only stabilizes the amplifier sepresent the SMPS power section for maximum power and minimum weight. A new perspective on RCF linearity speakers are developed using FiRPHASE, FIR's own and advanced filtering technology, designed to deliver transparent sound, absolute clarity and the perfect stereo image for the listener. The FiRPHASE algorithm optimizes the dynamics, amplitude and phase patterns, while ensuring a minimum latency of the system. High Frequency High Performance RCF ND940 4.0-inch Titanium aperture compression driver 1.4-inch output throat 680 Hz crossover Point 4 Path Waveguide Custom 4 PATH designed waveguide allows accurate coverage of 100 x 15 degrees, and provides an excellent, linear high-frequency response. The unique shape of the four ducts forming the guide creates an ideal isophazive load from 680 Hz to high sound frequencies 2 X 2.5 voice coil neodymium 10 woofers Low processing frequencies up to 50 Hz Waterproof fiber optic cone Polycotton M-roll surround Hypervented magnetic structure High strength enclosure in composite polypropylene has a revolutionary new concept of rigging inspired by its older brother: RCF HDL-50A. Compared to acoustic power, it has surprisingly low weight for easy handling and flight. Integrated mechanics are fast and reconfigured, allowing the system-forming engineer to create J-shaped and spiral arrays starting at 0.2 angles. The equipment is designed for easy and quick customization. The angle can be adjusted to hang the system, onto the ground, and slip automatically into the correct position when pulling up the array. Up to 20 HDL 30 - modules can be fixed on one flybar. The Firphase RCF speakers are designed using FiRPHASE, a patented and advanced FIR filtration technology designed to deliver transparent sound, absolute clarity and perfect stereo images to the listener. The FiRPHASE algorithm optimizes the dynamics, amplitude and phase patterns, while ensuring a minimum latency of the system. The phase of the FIR FIRPHASE algorithm uses this dimension and adapts the loudspeaker phase without touching the amplitude. At the heart of the advanced technique used by FiRPHASE is the recursive method) combined with a patented algorithm that calculates the best FIR filter ratios set in accordance with amplitude and phase restrictions. The algorithm corrects the phase and amplitude (if necessary) to take into account weak points of previews and resonances or cancellations Despite the perfection of the design of our thumbs and cabinets, we understand that phase at medium low frequencies with relatively small filters, reaching a higher resolution than the theory suggests.
