If there's a narrative in your presentation, you can import the audio file directly into Windows Movie Maker. Everyone has a preference when it comes to their favorite apps. You'll find google User Sheets that just won't touch Microsoft Excel, Apple Pages users who push Microsoft Word, and more. One example of this is the gap that exists between Core Apple and Microsoft PowerPoint. I find myself switching back and forth between two apps, but I can certainly understand why users have strong preferences. The Keynote interface is very intuitive, while PowerPoint does work with Excel Breeze, a key feature for many power users. Because I jump back and forth between PowerPoint and Basic Presentations, I sometimes need to convert PowerPoint into a core presentation against my employees. It's easier than you think to convert presentation files, so you'll never leave anyone away from opening and working with a presentation. It's not uncommon to switch between presentation apps. When you need to switch between platforms, you may need to convert PowerPoint to Keynote. Let's learn to do it together. Get your copy of our free book on presentations whether you have PowerPoint presentations, keynote presentations, or both-you want our free e-book: A complete guide to creating great presentations. In it, you'll discover the presentation techniques you need to deliver a powerful presentation with an effect. Now it's time to learn about transforming PowerPoint into Keynote. How to convert PowerPoint into keynote (Watch and learn) Want to go through the opening of the PowerPoint presentation in Keynote together? Make sure to play the screencast that you see below to learn how to convert PowerPoint to the main presentation. Want to know more? Keep reading below to learn how to convert PowerPoint into a major presentation and fix any incompatibility as you go. Convert from PowerPoint to KeynoteIn this example, we're going to convert the PowerPoint presentation and open it in Apple's Keynote presentation app. Throughout this lesson, you'll see how I use the PowerPoint presentation, which is pre-built from the Envato Elements library. The items are all you can download a service for creatives that includes presentation templates, stock photos, and more. All of these PowerPoint templates are available at a flat fixed rate as part of an Envato Elements subscription. If you don't have time to create something from scratch, it's the savior to capture of the elements, not. Start with a presentation template, drop in your data, and presto! You created a presentation much faster than creating from scratch. In this tutorial, I'm going to use the Paradox PowerPoint template from Envato Elements. Paradox beautiful presentation template, but unfortunately only available in the PowerPoint version. Since we can transform PowerPoint into a major presentation, we'll learn how to make it cross-compatible in this tutorial.1 Open powerpoint presentation in Keynotell turns out that opening a presentation in Keynote is easier than you think. Obviously, Apple has recognized its role as a second player in the presentation application market and knows that it will take some time to catch up with PowerPoint market share. So the opening of the PowerPoint presentation in Keynote is pretty simple. Open PowerPoint on your Mac and review the PPTX or PPT file. Then click on Open to run in Keynote.Choose File in Keynote and review the PPTX file to begin converting it. Now you'll see the keynote presentation. You may see some warnings about items that don't translate well to Keynote, but don't worry about it at the moment. I'm always impressed with how well this conversion process usually works. For example, the built-in sound, images, and videos worked great in my testing. If these files are not very unusual or specific file formats, conversion usually takes perhaps 90% of the work. Once the conversion is complete, save the updated version of the file as a .keynote file. Keynote will automatically take care of most of the work during the conversion phase. However, this may not be the only step that needs to be taken to prepare the presentation for use in Keynote. Keep reading to set everything else up. Browse Warnings You may have noticed when you open the PowerPoint presentation in Keynote that there are some warnings about how a PowerPoint presentation might look different. The main flags are issues that may have arisen during the conversion. The warnings that appear after the PPT's conversion to Keynote.Let's, let's see how to fix and change the presentation so that it transforms as smoothly as possible between the two applications.3 Replacing fonts!It's not specific to converting PowerPoint presentations into Keynote, but you'll probably see this problem when you convert. You have to replace fonts if you don't have them installed on Mac.When you download presentation templates from items, it's likely that the author uses free fonts available online, so make sure to check the documentation and download these available fonts if so. To replace the font, click on the font replacement... button on this pop-up window. You will get the opportunity to choose replacements from the drop out menu. If you know a similar font, you can just choose it from this down drop to replace all instances of it in the Keynote presentation, as you can see in the screenshot below. One by one, you can replace fonts that available on your computer with font replacements in the dropout list. If you don't have access to font fonts The PowerPoint author used may need to make a replacement. In the Replace fonts menu, choose alternative fonts from drop-off options. Check Out The Charts and GraphsPowerPoint has some really advanced chart features thanks to its tight integration with apps like Excel. Folded bar charts, pie charts, and more are easy to create in PowerPoint. Keynote makes it easy to map too, but the formats don't translate one by one. The problem is that when you try to bring these charts to Keynote, they don't change smoothly. This aspect is just one area where conversion sometimes misses the mark. The stacked line chart is converted from PowerPoint, but some aspects are missing and work differently than the PowerPoint version. Simply put, you may need to create new charts in Keynote. This is one type of content that just doesn't convert easily. Both presentation platforms have implemented different ways of scheduling, and it's only natural that it doesn't always work perfectly.5 General Review and AdjustAs I reviewed my converted PowerPoint presentation, it was clear that multiple objects and text boxes should be moved a bit. It is very important when you convert files from one format to another so that they remain true to form. This means that the presentation is displayed the way you expect it to. There may be other issues that are not flagged in the pop-up alert at the first conversion. Make sure you view each slide before introducing it to the audience. You want to avoid anything looking or not working when you share a presentation with your audience. Another option: Use PowerPoint Online!Throughout this tutorial, we have been converting the presentation from PowerPoint to Keynote. The basic idea here is that it allows users who do not have access to Microsoft PowerPoint. Converting a presentation is one option. But, it's not the only way to include others in the presentation. If you don't want to convert an existing presentation, you can let others edit using free alternatives. That's where PowerPoint Internet comes into play. Available for free with a Microsoft account, you can go to Office365.com to get started. Download the PPTX or PPT presentation, invite other users, and they can edit the presentation online. As long as they have a web browser, they can work with the presentation. In this example, I downloaded Paradox on my OneDrive and opened it in PowerPoint for web browsers to share and include others. For more entries to learn how to use PowerPoint Online, check out the tutorial below to see it in action: Microsoft PowerPoint How to share your PowerPoint presentation (free) Andrew Childress!t's approach doesn't technically convert a presentation through formats, but it will help you achieve the goal of inviting others to work your presentation.
