Generally, they can be divided into two categories: practical and creative models. The first requires less space, has a tight design and neutral colors. It's not actually a pad because heat is produced while you're holding the mouse. Take a look at this product, the USB Optical Heated Mouse, which heats up to 120°F in a few minutes. The downside of this option is that, unlike other heated mouse pads, such mice only warm the palms of your hands, not the entire hand and wrist. But it gives you freedom of movement, without depending on the pad. Another type of heated mouse bearing is the one that has a creative luxury design. They are bright or come in the form of cartoon characters and animals, so you can choose one that will warm not only your body but also your heart. You can choose a puffy mouse pad shaped like a bear's claw equipped with wrist protection. Alternatively, you can choose a hand warmer designed as a thin fur blanket with a bottom that does not slip. 10 Best-Selling Heated Mouse Bearings – Previous 1 2 3... 20 Next -- The help section or contact us There are many heated mouse pads on the market, so everyone will be able to find the most suitable option.
