Age: Child via AdultAdministration: 10 to 15 Minutes New Features: User-friendly, regulatory data for multiple populations at hand. The Aberrant Behavior Checklist (ABC) is a symptom checklist for assessing problematic behaviors of children and adults with developmental disabilities (intellectual disability, ASD, cerebral palsy, epilepsy). It is also useful for classifying problematic behaviour of children and adolescents with developmental disabilities at home, in educational institutions, community institutions and development centres. ABC asks: Installation where the person is observed and for the presence/gravity of functional limitations. 58 specific symptoms are then evaluated, and an extensive guide contains exhaustive descriptions for each behavior assessed. The checklist can be completed by parents, special caregivers, psychologists, immediate caregivers, nurses and others who know the assessed person. 58 elements Solved by five subscale: 1. Irritability 2. Social conclusion 3. Stereotypical Behavior 4. Hyperactivity/Non-compliance 5. SpeechThe Aberrant's inappropriate behavior list now includes combined community guides and living quarters, so test administrators have convenient regulatory data for multiple populations, all in one guide. ABC-2 Combo Kit includes: Combo Guide (community/residential) Forms - Score sheets (50) (Community/Residential) Other details of the Abnormal Behavior Checklist: Empirically Designed Factor Analysis data from 1,000 residents. Average sub-scale scores are available for children/adults living in the community and for child/adult care settings. Translated into 35 foreign languages and dialects, ABC has been used in more than 425 scientific studies. An extensive ABC psychometric assessment showed that sub-scale has a high internal consistency, good reliability and established reality. Number of Instructor Discount Available for ABC..... (Fred Volkmar, New York: Springer Science-Business (Internet Direct Link) (Abstract)Norris, M., Aman, M.G., Mazurek, M.O., Scherr, J.F., Oll, E.M. (2019). Psychometric Characteristics of the Aberrant Behavior Checklist in a clearly defined sample of youth with autism spectrum disorder. that was empirically obtained by the main components of the analysis (Aman, Singh, Stewart, Field, 1985a). It contains 58 elements that are solved by five subscales. Subscash and the corresponding amount : (a) irritability (15 titles), b) lethargy/social withdrawal (16 points), (c) stereotypical behavior (7 points), d) hyperactivity/non-compliance (16 points) and (e) (e) (4 points). ABC has been designed to be completed by any adult who knows the customer well. It can be a parent, a teacher, a workshop supervisor, an employee, and possibly informants in other roles as well. Depending on the ability to read, the completion time varies, but most fares can complete the ABC in 10-15 min for the first time...
