ENPage 2 ENPage 3 ENPage 4 ENPage 5 ENPage 6 ENPage 7 How to properly scan your fingerprint to improve fingerprint recognition speed. BioLite Net can read fingerprints even if the angle or position of the finger has changed. If you register a fingerprint with the following instructions, the speed of recognition can be improved. Choosing a finger to register: Each person can register up to 10 fingerprints. If some fingers have been damaged or used to hold something, they should not be used. If the fingerprint is not well scanned, the fingerprint can be registered twice, which improves the quality of fingerprints or is not clear, please use the other finger to register. The index finger or middle finger is preferable to registering fingerprints. Other fingers may show a lower rate of recognition because these fingers tend to have difficulty with being placed in the center of the fingerprint scanner. How to register a fingerprint When registering a fingerprint, the message scan the first finger will appear on the lcd screen. Place your finger on the fingerprint scanner and then press gently to improve the speed of recognition. After the beep and the screen appears to scan again, scan your finger again. (The finger must be scanned twice to register.) The precaution for fingerprint registration is the most important procedure because this device uses a registered fingerprint to compare it to the fingerprint that the device is trying to read. Please make sure when registering your fingerprint: Place your finger firmly on the fingerprint scanner in order to be read in full. The fingerprint center should be located in the center of the fingerprint scanner. If your finger is damaged or your fingerprint is not clear, please use another finger to register. Follow the instructions on the screen and place your finger correctly without moving when your finger is reading. If your finger is raised, placed in the center, or only part of the finger is placed on the fingerprint scanner, the fingerprint may not register. BioLite Net fingerprint reading can read fingerprints, regardless of changes in seasons or finger condition. However, the external environment or the placement of the finger can affect the speed of recognition. If your fingerprint is not very well read, the following steps are recommended. If there is water or sweat on your finger, please wipe it before placing your finger. If your finger is too dry, please kick gently on the tip of your finger before placing your finger. If your finger is damaged, please register the other finger. Fingerprint registered from the first is usually placed incorrectly. Therefore, register your fingerprint several times according to the Precautions for fingerprint registration.
