Thank you, we'll look at it. Enjoy free shipping on all orders over \$100*NV4500 5 Mechanical Transmission Speed NV4500, built by New Venture and used in numerous apps, is the best manual transmission ever produced. Pretty bold statement, right? Well, these are not necessarily our words, but the ones we hear are pronounced day in and day out, and although we may agree to some extent, has proven itself as a great option. In terms of light diesel fuels, the NV4500 was used in Heavy Duty, Cummins equipped the Rams and some V10s from 1994 to early 2003 model years. For several years there has been a bit of overlap between five speed speeds and six NV5600 speeds. By comparison, the NV4500 model had a flywheel with a diameter of 12.25 and an input shaft with a diameter of 1.25 inches, where the NV5600 had a 13-flywheel and a 1-3/8 shaft. That being said, one of the most popular upgrades for the NV4500 is to blow it to 13 flywheels and clutch kit, and especially for those going to double drive to also upgrade to a larger shaft. The most common malfunction of the NV4500, in addition to conventional clutch wear, is the dreaded 5th gear nut. What can you ask? Well, it falls, and when that happens, bad things happen! To alleviate this issue before it causes you a big headache, all you have to do is just boil the nut in place and it's a very common procedure, especially when replacing the grip. Overall, there are a ton of options when it comes time to replace the grip in your NV4500. You'll find some of our top options on this page, but if you want to see all the options, just make sure to go to your car using the vehicle menu at the top of the page. Otherwise, feel free to call us or send an email to and we would be happy to reach out. Hand.
