## The gaming homepage 1

We bring together the best brains in basic and clinical cancer research, the rigour and drive of pharmaceutical and biotech companies, as well as our in-house drug discovery and alliance management capabilities to deliver cutting-edge drugs to cancer patients. In recent years, we have established successful alliances with AstraZeneca, Teva Pharmaceuticals, FORMA Therapeutics, Merck KGaA and LifeArc (formerly MRCT). We have also been successful in implementing the alliance's model through the formation of spin-out companies, including Artios and iOnctura. More about our approach Animals from NIA aged rodent colonies are available to investigators at academic and non-profit research institutions. Show ROS User Guide The National Institute on Aging (NIA), part of the National Institutes of Health (NIH), maintains colonies of barrier-raised rodents under contractual agreement with commercial suppliers. NIA aged rodent colonies are a limited resource developed for use in aging research. Learn more about eligibility criteria, available strains, and more in the NIA Aged Rodent Colonies Handbook. To start the order process, you must register today. Sign up today! Login If you don't have a games console in your home right now, chances are you'll soon especially given the latest round of competitive price cutting and the new online gaming phenomenon that has taken the world by storm. Just last November, investment banking firm Bear Stearns reported that games as a category would grow significantly faster than TELEVISION, radio, film, music and newspapers, and they seem to have been on to something: Americans' spending on video games last year reached an incredible \$4.6 billion, more than the total amount spent on movies (rent and theater combined). Today's game is a far cry from the classic Atari of the 1970s, which created most modern gaming gurus. Three-dimensional characters move in all directions in incredibly detailed comic book worlds, using complex movements that would put Bruce Lee to shame. So this may explain why more than 90 percent of the games today are purchased by someone over the age of 18 (for themselves or for other household members). Three systems currently rock the gaming world: Sony's PlayStation 2, Nintendo's GameCube, and Microsoft's Xbox. They are all hits for different reasons, so you just have to choose which features appeal to you. And the rest is easy: Your purchase will not be outdated when you get home; dramatically different systems are not expected in about two years, but fun new accessories hit the market every day. PlayStation 2 PlayStation 2: The Leader of the Pack Sony's PlayStation 2 (PS 2) (\$199) is the overwhelming leader with more than 11 million systems sold in North America alone. It can play titles developed specifically for it, in addition to those made for its predecessor. model is now now and sold as PS One for \$49.) The combination means PS 2 players can choose from more than 1,200 games, which is four times as many as the gamecube. Many of these games, of course, were written long ago and do not live up to today's standards. PS 2 is a steal because it can play DVDs and CDs and boasts dolby 5.1 surround-sound support. GameCube GameCube: The smallest Nintendo's GameCube (\$150) is the cutest of them all, measuring about 6 inches on each side, and includes a built-in handle. It uses a proprietary mini-CD so it can't play standard CDs or DVDs. It has no hard drive, so it uses a memory card like PS 2 to detect settings and scores. And although it has the smallest number of games, the available ones include exclusive offerings like Pokemon, Zelda, and Mario titles (such as Super Mario Sunshine, which sold more than 350,000 copies in the first 10 days it was available in stores). Xbox Xbox: The most powerful Microsoft's Xbox (\$199) has an internal hard drive, a built-in network connector and claims to have the most powerful processor and best graphics processing of the three systems. It uses standard-sized CDs; to play DVDs, you must purchase an adapter for \$30. It's compatible with hd TVs, and some new TVs are now even complete with built-in Xbox support. Three's Company: What they have in common do you find similarities between the three systems. All boxes simply need to be put in the wall and into your TV. Each box has a specially designed 128-bit processor chip. So when you're shopping around and watching the PS 2 box boast that it has a 128-bit processor with a 295-megahertz (MHz) clock speed, it means the chip can handle 128 yes-or-no decisions 295 million times per second. The faster the machine can make decisions, the faster the games tend to run, and the more detailed they can be. The chip that runs each box is unique, which is one of the reasons why games written for one box won't run on the others. (All three systems have games that are exclusive to their respective platforms, although many titles are available in all three variants.) Each box comes with a single game unit, a cross between a game pad and a joystick, but up to four people can play at once if the game title and system support it. Additional or upgraded controllers are available from a number of companies. Xbox and GameCube have four controller ports. PS 2 has two. Most current models look like a bow, with two short arms on each side and triggers on the front where your index finger rests. Many controllers can now vibrate so you can feel the experience, and wireless models for all three systems are in stores (a must-have if the sofa is far from the TV). Of the three, the PS 2's controller (included) has the most outdated design with flat buttons instead full triggers. Web Wars: Online Gaming The Biggest News This Season? Online games, games, gives you the chance to compete against other players around the world. Microsoft's Xbox, which has built-in online gaming support, was scheduled to launch its Xbox Live gaming portal in November. Sony released \$40 network adapters for its PS 2 in August to allow games over analog and broadband Internet connections. Nintendo was expected to release its \$35 modem and broadband adapters before the holidays. A broadband Internet connection (such as a cable modem or a DSL phone line) is encouraged for all three systems' online connections and is required for the Xbox Live service. Microsoft said the company will charge \$50 for the Live package, which will include a year's worth of access with a headphone and microphone for voice chat. The

other two companies said they won't charge consumers for online gaming access, but their game developers can. Good news for Gals While there are still plenty of video games where the ladies are nothing but bouncy window dressing, strong female characters have become surprisingly popular in games marketed to both women and men. The headlines include names like Lara Croft and Primal's Jennifer Tate (P.S.2), but even games in which women don't play a starring role (such as GameCube's Eternal Darkness, which features women in its time-traveling lineup of heroes) are starting to give female characters a backbone. That may be why 43 percent of players are now women, according to the Interactive Digital Software Association, and why movie spin-offs like Tomb Raider are a hit at the box office with both genders. Top 5 Games By System \* PlayStation2: NCAA Football 2003 Grand Theft Auto III Medal of Honor Frontline Stuntman Gran Turismo 3: A-spec New this season: Tony Hawk's Pro Skater 4, Star Wars Bounty Hunter, .hack, and Hitman 2 GameCube: Super Smash Bros.
