Prostate cancer is a common cancer among men. Almost one in nine men will be diagnosed with prostate cancer. The test is considered a routine screening for beneficiaries. As long as your doctor is taking Medicare, you should have insurance. PSA tests can help screen you for cancer early on, so you can get the best treatment available. Let's check out some of the things that Medicare will cover when it comes to screening for prostate cancer. Medicare will cover the PSA test for men over 50. You may even be able to get the testing done if you are under the age of 50. But your doctor should feel like it's from the medical year 2000. A prostate-specific antigen test falls under your part B benefit. Since screening is preventative, you won't pay coinsurance or deductibles. Part B will cover prostate-specific antigenic tests once every 12 months. Men over the age of 50 may have a PSA test starting on their 50th birthday. You will not be responsible for any costs of this testing as it is preventative care. A standard PSA test can cost you from \$60 \$ 80. Depending on the level of care required after the initial initial You can expect to pay more. You may need follow-up visits and screenings for further cancer screening. So while your original screen is free, it's best to prepare for additional charges in the future. While there are many different ways to test for prostate cancer, the two remain the most popular. A prostate-specific antigen test is a blood test. The PSA level in the blood may be higher for those dealing with prostate problems. High PSA levels in the blood can mean several things, such as: a reaction to certain medications. You may have an enlarged prostate. You may suffer from a prostate infection. A digital rectal exam is a physical examination, not a simple blood test. Your doctor will check for prostate abnormalities that may indicate cancer. You will want to double-check with your doctor in advance to find out which test might be best for you. Part B will cover both PSA tests for cancer testing as well as digital rectal screenings. When you decide to move forward with a digital rectal exam, you will pay 20%. You will then pay part B of the franchise and any applicable co-payments. If you have a PSA test, you will not be liable for expenses. But you need to be sure that your doctor is taking Medicare, or you could pay all the costs. Medicare Advantage policies must cover at least what Medicare covers. What exactly does this mean for you? While you get the usual PSA test for free for you, there may be additional fees. If your doctors decide that he wants to run follow-up tests, you won't have to pay for them. Instead, your Medicare Advantage policy will pay for screenings. Keep in mind that Medicare benefits plans work within the network. Your provider and the institution you are being treated to should be on your network. If not, you will surely have high medical bills to pay. Medicare plans offer a significant gap between your coverages. Your Benefits part A and B cover only 80% of the cost of all treatments associated with prostate cancer. By signing up for Medigap, you can save a lot of money. The Medicare supplement plan will cover 20% of the costs you have to cover. For those who are on a strict budget, this is helpful. Frequently asked questions When doesn't Medicare cover PSA test? Medicare will cover the PSA test when it is for regular exams. Medicare will not pay if your doctor orders a PSA test along with a single diagnosis. You will have to pay out-of-pocket costs to pay for PSA testing if you already had a free screen for a year. Does Medicare cover prostate biopsy? Part B benefits usually cover prostate biopsies for diagnostic purposes. Your doctor will have to that a biopsy is necessary and the doctor should take Medicare. If you have an Advantage policy, you can also get coverage for a prostate biopsy. Does Medicare cover prostate surgery? Medicare will cover prostate surgery Your doctor decides that it is necessary. Any inpatient surgery you go through for your prostate will fall under your part of A. Outpatient surgical procedures will fall under your benefits of Part B. Keep in mind you will have to pay your portion of the costs as well. Your share may include deductibles, coinsurances and co-payments. Medicare will pay 80% of the cost of the operation, leaving you the remainder of the 20% in fees to pay. By testing for prostate cancer early on, you can better your chances of curing the disease. Remember that early detection is fundamental. Our team of Medicare experts can help answer your questions about PSA tests. You never want to overpay for a plan that isn't perfect for you. Let us help compare policies and prices for you. It's as simple as calling the number above or filling out an online course form. Last updated: 09/10/20184 min read As a beneficiary of Medicare, you may be eligible for a single PSA test, also known as a prostate-specific antigenic blood test that screens for prostate cancer. You can get this test on any account for you once a year, as long as your doctor accepts a Medicare prescription and you meet certain eligibility requirements. Here's what you need to know about Medicare coverage for the PSA test. Finding Affordable Medicare plans in your area PSA test is a simple blood test that measures substances in the blood that may indicate the presence of prostate cancer. In a person with a healthy prostate, these substances, prostate-specific antigens, are present in the blood in very tiny amounts, usually less than 4 ng/ml. In a person with prostate cancer or other prostate abnormalities, PSA levels become elevated above 4 ng/mL. If your PSA test is elevated but you have no other prostate cancer symptoms, your doctor may recommend another screening test, such as a digital rectal examination, to rule out prostate cancer. If the rectal examination is negative, your doctor may recommend continued follow-up on a regular basis. Other conditions that may cause elevated PSA levels include prostate infection (prostatitis) or enlarged prostate (benign prostate hyperplasia, or BPH). However, if your rectal exam also shows suspicious findings such as an enlargement or lump, your doctor may recommend other diagnostic tests such as a transrectal prostate ultrasound, or even a prostate biopsy to confirm or rule out the presence of prostate cancer. Who should take the PSA test? Many medical organizations recommend that prostate cancer screening tests, such as the PSA test, be included in routine physical screening for all men starting at age 50 as part of their preventive care. People who are increased risk of prostate cancer may even have PSA screening even earlier, starting at 40 or 45 years old. The risk of prostate cancer may increase if Applies to you: You are aged 50 and over; the risk of prostate cancer increases with age. A family member was diagnosed with prostate cancer. You are a member of certain ethnic groups, most often African-Americans. Your diet is high in fatty foods. Also, if you show any symptoms of prostate cancer, your doctor may recommend a PSA test at any time. While many men with prostate cancer never experience any symptoms, those who may have one or more of the following: urine frequency, weak urine flow, pain while urinating, or blood in urine or semen difficulty maintaining an erection or ejaculation of pain in the hips, back or pelvis that persists over time When Medicare covers the PSA test? All men over the age of 50 are eligible for a free PSA test once every 12 months under the Medicare Part B preventive benefits. If your doctor does not accept a Medicare prescription, you can pay for your doctor's services, but not for the PSA test itself. Where can I get more information about the PSA test? If your doctor has recommended a PSA test and you have questions about Medicare and health tests, I would be happy to talk to you more about what Medicare covers. In addition, I can recommend other plan options, such as Medicare Advantage plans, which may cover additional preventive services outside Part A and Part B, such as wellness programs.
