Maureen Brune Designing a Web Page in Microsoft Word is easy to accomplish without any formal web learning or coding skills. The word is an excellent tool for teachers, scientists, mathematicians or other professionals, concentrating on research, analysis and information rather than presenting that information on the Internet. Develop a blog page using Word templates and post-training programs, research results, mathematical theories, or information related to your area of knowledge. Create an executive newsletter for a web page or create a web page using tables. Click the View button and then Web Layout in the Types of Documents section. Create a sketch or layout of a web page. The layout shows how many lines and columns you need to create a web page. For example, for a web page with one image, one section of the left column hyperlink under the image, one section of the right column text, and one section of the right column hyperlink, four table cells are needed for that web page. Click The Insert, Table, and Table 2X2 to display the table with two columns and two lines in the document window. Click inside the first table cell, and the cursor flashes inside the cell. Click the Insert and Image button, and the Insert Picture dialog box opens. View the picture, click on it, and then click the Insert button in the dialog field so that the picture is inserted into the table. Tap the table cell to the right of the image and attach the text associated with the image. For example, if you inserted an image of the Milky Way galaxy, you can enter the following: the size of the Milky Way galaxy is difficult to quantify, but it is a huge collection containing billions of stars. Click on the table cell below the text, click the right button, select Hyperlink and enter the solar system hyperlink section in the Contact Of the Dialog Window Insert hyperlink and click GOOD. Click the File, Save As well as select Web Page, Filtered from the Save menu as a type in the Save as dialogue field. Click Save to save the design in web page format. A fish pilot is hired to create an intranet for this manufacturing business, and there is one critical requirement he has given when he takes the job: He can't name him by name. I was told under no circumstances to ever call it an intranet, says the fish. I was told to call it I-Web. It turns out that one of the family members who ran the place was a bit technologically ignorant, in addition to being very paranoid. When the head of IT suggested we develop an intranet, it went ballistic, making it a famous loud voice that the internet would never be allowed into! Why, all that, all that subversion, all these The boss tried to explain that the intranet is not the same as the Internet, but it only got her more excited . So, after a few months had passed, he again approached her idea of an exciting new technology called I-Web. This time, she was 100 percent on board with him - because it wasn't the internet. Take Sharkey aboard. Send me your true stories about IT life sharky@computerworld.com. You will snag a chic shark shirt every time I use one. Add your comments below and read some great old tales in Sharkives. Get a daily dose of out-takes from the It Theater Absurd delivered directly to your inbox. Sign up now for the shark's daily newsletter. Image copyright © 2016 IDG Communications, Inc. we have to thank her for the ecomagination. She moved into THE GE division of NBC Universal 18 months ago and has just received a new gig that combines sales of advertising and digital media across the television network, cable channels and film studios. Want to stream Heroes, read an interactive novel and then bet online for works of art from the show? Thanks to Comstock for all that too. The economics of television were simple. Do you understand how to make money today when I can watch 30 Rock pretty much anytime? We understand this much better than before. Digital media allows us to open new windows without the cannibalization you might expect. So yes, we can offer 30 Rock in preview, then on the air, then streaming, then iTunes, then mobile, and then syndication. We did the simulation. Looks like we're making more money. How do advertisers cope with this new world? Some know what they want, some to a lesser extent. But now, every marketer does digital, not because it's fashionable, but because they should. Buying groups have created units called sight, sound and motion (to work through the media). They expect us to zero in on targeted consumers: What do we know about them and how do we achieve them? How do viewing habits change? We had 60 million streams (television shows) in NBC.com. Many of them are repeat viewers. Others change time. They are shift locations, too, with iTunes or on phones. And does that work for you? He has to. If consumers are in control, they understand how they want to look. We have to find the right solution. What happens next? More personal expression (viewers), a desire to participate in the narrative. For example, SMS text to vote in a reality show, or watch Heroes and dial a phone number. This material is so rudimentary; One day we'll look back and say, We were so nice then! All this implies huge cultural changes. How does NBC Universal handle it? This space is frantic and chaotic, and we are constantly trying to get out of our own way. With you will get a little more confident. But we still need to be more focused and more disciplined. Are you still, as you once said about yourself, impatient? Yes. And I'm afraid. I scan the landscape all the time. What happens next? Who will be there in the first place? This business is so hypersensitive. You have to choose the path, keep it, and feel good about it. The second guess ends up with more than an ulcer. A member of our web team came across what could be a useful and economical business tool. iDictate is a service that will transcribe documents sent to them over the phone or dictating the device - think traditional dictation; You call to dictate your document - about 1 cent per word. They also offer standard transcription services for about 2 cents per word. Most transcription services bill by the hour, so it seems quite a lot - especially with turnover times ranging from 24 minutes to 24 hours. Have FC Now readers used the service? If you want to find something on a web page, you can search for it. Learn how to search for a word on a page using find Word's main web browsers or search engine such as Google. The easiest way to find a word on a page is to use find a word. It's available on major web browsers including Chrome, Microsoft Edge, Internet Explorer, Safari and Opera. Here's the keyboard shortcut method: Open the web page you want to search. Click Ctrl-F in Windows and Linux. Click Command-F on Mac. Enter the word (or phrase) you want to find. Click Enter. The web page scrolls until the word appears. If a word occurs more than once on the web page you're looking for, click Enter to move on to the next appearance. Or select the arrows on the right (or left) of the Find Word window. Another way to search web pages is to use the appropriate bar menu. On Mac, use the next process, regardless of the browser you're using. Use this process when using Safari or Opera. Open the web page you want to search for. Go to the menu bar at the top of the page and then choose Edit. Select Find on this page. Some browsers may have a Find option. Depending on the browser you're using, you may have to take four steps, not three. For example, use Google Chrome to hover over Find and then select Find. If you're using Windows PC or Linux, or if you want to use a web browser rather than an operating system, here's what you do for every major browser (except Safari and Opera). These instructions should also work for the relevant mobile browsers. For Google Chrome, Mozilla Firefox and Microsoft Edge: Open the web page you want to search. Select the More icon (it's in the top right corner of the browser window). Choose to find or find on this page. In Internet Explorer 11, select the tools, hover over the file, and then select Search on that page. If you don't know a specific page where you can find the right word or use Google to find a particular word or phrase and focus on the site you want to find it on. Google has special characters and features for and control the search. Go to Google. Or use the browser search feature if it's configured to use Google as a search engine. The type of site followed by the colon (:) and the name of the website you want to search. It should look like this: site:lifewire.com After that, leave the place and enter search terms. Overall, it should be something like this: site:lifewire.com Android apps Click Enter to display search results. The search results come from the website you entered. To further narrow down search results, attach search terms to quotes, which makes the search engine search for just that phrase. Talking to yourself can keep you sane. A recent study by University of California researchers suggests that repeating a keyword or two can reduce stress levels. When 66 people silently said the mantra - a meaningful word or phrase - at a stressful time, 83 percent felt less stressed. One critical point: People practiced their mantra first in quiet moments, charring their minds to associate it with relaxation. The mantra can be used in short fragments or for longer periods, says lead author Jill Bormann, Ph.D., R.N. It can be anything from a shalom to take it easily.
