If your phone is currently in warranty, then I recommend you use the system less method to eradicate your phone, because the system's less rooting method can be easily removed from the phone and it will not be tampered with with any files on the operating system, which means that your phone will be left under warranty, but the system is less a method to eradicate the mobile phone quite difficult, on the other hand rooting the phone custom applications is quite easy. You just need to press one button in the app and your phone will take root. If you want to eradicate your phone system-less, then follow this guide otherwise follow below step-by-step instructions:- A little about Huawei Y6 Prime 2018 before rooting Display: 5.7 inch IPS LCD (720 x 1440 Resolution) Launched: 2018 Operating System: Android 2018 8.0 Oreo Processor: 1.4 Ghz Octa Core Internal Space: 16GB Battery : 3000 mAh Li-Po (up to 15.1 hours Talktime) How the root of Huawei Y6 Prime 2018 Rooting helps many users increase mobile phone performance and also change the part of how your phone responds to a certain command, so rooting the phone is known and well known topics around the world. As we discussed above the application method is by far the easiest way but with application I provide a software solution to eradicate your phone which means you can eradicate your phone with or without a computer. Before following one of our methods to eradicate the device, please activate the debugging mode in your smartphone. 1) Use the Kingroot App To download and install the kingroot app by following the link Once you've downloaded the app to your smartphone, click on the app to install. Before installing it, the app required your permission because you're installing a user app, so when a pop-up quick message will be revealed under the name BLOCKED just go to SETTINGS and click on UNKNOWN SOURCE as shown. Now the app will start installing, open it after installing it and click on the ONE CLICK ROOT button. Once the process is complete, your phone will be rooted. Be patient during the root period because some may take up to 30 minutes to eradicate and make sure your phone doesn't shut down during the root. 2) Through SRSRoot software the third method to root is pretty bothersome and you need a usb cable and a computer to root. Go to the next website and install the software on your computer by clicking on the download tab at the top of the page. After installing open software and connecting your smartphone via USB Cable. Make sure you turn on USB DEBUGGING before you continue. Now click on the ROOT DEVICE button in the top left corner to start rooting the device. If you're looking for more apps like Kingroot then try these - Framaroot and Towelroot. The method of installing each application will be the same. As Unroot Huawei Y6 Prime 2018 just like rooting you have to unscor your phone whenever you visit a customer service office to repair your smartphone or install operating system updates on your smartphone.
