Because we have good news for you because luutinh developer studio offers you this customization tool to make the look of your Android screen look like an iPhone screen. Turn your Android into iPhone iOS 14 Launcher offers us the opportunity to turn our Android into an iPhone. Well, in fact we can only change the look of the screen. In this way, we can change the internal design, but we can also add some additional utilities typical of Apple terminals. With Launcher iOS 14, your phone is the most powerful, personal and intelligent device that ever existed. First, with this launcher, we can change the background of our terminal screen to one that comes by default on iOS devices. We can also change the icons of our terminal (and its size) and the taskbar, as well as customize gesture labels and choose between blur effects. If you want to disguise your Android as an iPhone, this launcher app offers you a unique, very interesting feature. Leave your terminal with an exquisite touch, without having to go into debt because of it. It.
