For some unknown reason I was never a fan of Schaeffer, but I ended up with a couple of their pencils. Here's one I took recently at auction. I'm not sure, but from some web search I believe it's a Pencil Schaeffer Imperial from the mid-1960s to the mid-1970s. All photos are interactive to zoom in - I suggest you do this as it's a lovely pencil. It uses 0.9 mm lead, and screw mechanism. The upper half of the body winds round and round to propel or give up lead. Spare lead is stored inside the body, but it is the loading mechanism of the tip. Around the center it is designated as 1/30 12K R.G.P CASING 'Crown' SHEAFFER. The crown bit means there's a bit of a crown logo out there that I suppose some references to this being imperialized. Thus, these markings mean that the body of a 12 carat rolled gold plate over the base metal, a golden layer of 1/30th weight of the case. The body is decorated with panels of rather deeply engraved floral structures. I'm not usually a fan of this kind of thing, but it's really quite bright and appealing. Pocket clip spring loaded, and carries Sheaffer White Dot. Published January 29, 2009 - 17:53 I just got a tube set, and cleaned the pen, which is still restless, but the pencil is supposedly in working order. However I have no luck getting it to work. I have the right lead, which is 0.9 mm, and it turns and spins well, but the lead won't come out. I tried to insert it across the front, but it wouldn't get sucked in properly and a little loose, when I dropped the lead into the barrel I turned as much as I could, however it still wouldn't come out. any help is valued. Published January 29, 2009 - 18:18 Hello, you can cast an eye on the pencil filling instructions at the bottom of this Pendemonium page. You've probably already tried it all: when you totally advance the mechanism (no lead inserted), you can see a little metal pusher come to the opening of a pencil cone? If so, change the process until the mechanism is removed further. Insert lead in front (vintage pencils usually don't feed on the trunk) and press the protruding end of the newly inserted lead against the hard surface to set it securely - you should feel its lock in place. If the size of the lead is correct and if you have tried the above procedure without success, then the pencil mechanism may need some attention. Good luck! John Posted 29 January 2009 - 22:38 TIME (Univer January 29, 2009, 06:18 PM) Hi, you can cast an eye on the pencil filling instructions at the bottom of this Pendemonium page. You've probably already tried it all: when you totally advance the mechanism (no lead inserted), you can see a little metal pusher come to the opening of a pencil cone? If so, change the process to those won't pull it off. Insert lead in front (vintage pencils usually don't feed on the trunk) and press the protruding end of the newly inserted lead against the hard surface to set it securely - you should feel its lock in place. If the size of the lead is correct and if you have tried the above procedure without success, then the pencil mechanism may need some attention. Good luck! JonThanks a lot John!! besides breaking a little lead, when I pressed him to the table, I got it working. Published January 29, 2009 - 23:47 Hi there, My pleasure! I'm very happy that the pencil is running. (Breaking a little lead when you place it quite often, I'm afraid.) Cheers,Jon Posted on Oct 29, 2015 - 6:38PM Link of the dead - probably Little Brown Rectangle at the bottom of this page: Posted on Oct 29, 2015 - 7:51PM - 19:51 -- Editing by Vintage Pen and Pencil User Guide: ../UserGuides.htm Schaeffer c1914 Pence Schaeffer c1922 Pens Schaeffer c1935-1939 Dry-Proof Table Sheaffer 43 Triumph Schaeffer 1947 Vacuum Filler 1947 Stratowriter Schaeffer 1949 Touchdown Schaeffer 1952 Snorkel Pens Schaeffer 1955 Snorkel / Council-Dip Pens Schaeffer c1955 Finesline Cartridge Pen Schaeffer 1957 Cartridge Pen Cheffer 1958 Scripser Carter Penser c1959 PFM Pen for Men Schiffer Economy Cartridge Fountain Pen c1960 Schaeffer 1961 Council-Dip Schaeffer c1961-1962 PFM / Pen For Men (UK) Cheffer c1961-1962 PFM / Pen For Men Schaeffer 1961 Imperial Cartridge Pens Schaeffer 1962 Cartridge Pens Schaefer 1963 Lifetime Cartridge Pen c1964 Schaeffer c1964-1966 Pence Schaeffer 1965 Glideriter Schaeffer c1966 pens Schaeffer 1974 Pence Schaeffer c1976-1980 Pence Schaeffer c1976-1980 Pence Schaeffer c1986 , cool, and colorful tools to ignite your curiosity 1 Replace cassettes. The exact instructions may vary depending on the model, but usually start by pulling the eraser out of the pencil, which will pull the old cassette. Give the old cassette a shake just to make sure it's really empty. If so, insert a new cassette into the open pencil camera. As soon as it clicks into place, reset the eraser after the old cassette is disconnected. 2 Add lead to the top. If the pencil does not use cassettes, try pulling the eraser out of the pencil. If it shows the pencil camera when removing, feed the recommended amount of lead pieces into the pencil chamber. Fit the eraser back in place when finished. 3 Add lead through the tip. If the eraser is not removable or does not offer access to the camera, download below, not. First, oppress the end eraser and keep it in place. Fit the first piece of lead into the hole tip. Gently press it all the way inside the pencil. Repeat with each piece of lead until you fill the pencil. Note that some pencils advance lead from the camera by pressing a button on the side rather than an eraser. 1 Untie the handle. Find where the two halves of the pen screw together and twist them loosely. Once the handle is open, find the lead dispenser inside. Pull it free from the lead holder. 2 The lead leads to the handle. First, hold the top half of the pencil upside down, so that the hole for the lead holder faces up. Then feed the lead in the hole for the lead holder, one piece at a time. Be sure to download only the recommended number of pieces, which will probably only be a couple due to the limited space. 3 Cathedral pen. Fit the lead dispenser mechanism back in place. Screw the two pen halves back together. Give the pencil an action pen a couple of clicks to make sure it runs smoothly. 1 Find out n your pencil requires cassette tapes. Expect mechanical pencils to be rebotted in one of two ways: with or without a cassette. The cassettes already contain lead and can be loaded directly into a pencil like a single piece, while cassettes of less pencils require to feed each piece of lead into a pencil. Check the instructions to find out which method is needed. Manufacturers often color code their products, so you can tell what type it is at first glance. Cross, for example, uses a black strip around the base of the eraser to indicate that the cassette is needed, and a yellow stripe to indicate that lead pieces must be filed individually. 2 Use the right lead size. Check the pencil to see if the recommended lead diameter (usually expressed in millimeters such as 0.5 mm) is featured on its design. If not, check for its packaging or directions. Use only the specified diameter. Avoid jamming the pencil with lead that is too thick, or stuck with a wobbly piece of lead that is too thin. 3 Don't overload the pencil. Expect overload to drown out the pencil. Check his instructions. Find out the maximum amount of lead pieces that will fit inside. Some models can only fit two at a time, while others can hold up to nine. 4 Seek help when in doubt. If you no longer have pencil instructions, look for the manufacturer's website online. Once there, look at the exact pencil model to find out its specifications regarding cassettes, lead size, and capacity. Expect most companies to have instructions for reboots available. Add a new question question question How can I get the wrong size From a pencil? Break it apart and get it out. If that doesn't work, get a new pencil. However, it's interesting how you got the wrong lead size in -- if it's too small, it'll be fall out after removing the leads already there. If it's too big then it won't be installed there in the first place. The question is Where can I buy a 0.7 lead? You can get it from most discount, office or stationery stores. The question is, how much lead did I put in a pencil? You have to put 2-3 pieces of lead in a mechanical pencil. It can also tell how much to add to the pencil package. The question is how to fill a pentel Twist-Erase 0.5 lead? It should open in the middle (pull both sides in different directions and open). Insert the lead and close it back. The question is how to fill a mechanical G-2 pencil? Rinse the lid and then remove the eraser. Open the lead container (make sure it's the right size) and insert the lead pieces into the pencil one at a time. Never overload the G-2 mechanical pencil. The question is how to find out which pencil to buy? He has to say what type of lead is somewhere on the pencil, usually on the clip, and you have to buy the type of lead he says on the pencil. The question is, what number is the hardness of the lead? If the pencil says #2, it means HB. HB is the standard for pencils in America. If you have trouble smearing, H may be better suited to you. The question is how to reboot the Paper Mate Twist Erase? You can remove the top where the eraser is held and there should be a barrel. Once you've done the refueling of it, put the lid back. The question is how can I give up the lead from the tip of a mechanical pencil when I have finished drawing and want to put the pen away? Click to propel the lead, and hold it. While the button is pressed, you can gently push the lead (graphite) back into the pencil. (Same as method one, step three above.)
