The fraction of tablets of mobile gadgets is still somewhat undetermined - it's a smartphone that doesn't really make calls, a netbook that doesn't close without a flip-open case. But the pills are designed to appeal to people who will take it everywhere, which is usually the kind of people who don't want to spend a second, which, it stands for a reason, are those people who will download tablets with apps promises to deliver convenience. Software developers, for their part, tend to call this type of performance software, and Android Market offers are no exception. The market for Android tablet apps may not be growing as fast as its fans expected - as of early July 2011, there were 232 Android tablet apps available for the iPad's 90,000-plus variants Source: Pogue. Since Android developers tend to favor content over style though, some of these offerings provide significant benefits for gingerbread or Honeycomb-toting busy bees. Advertising Part of the problem with quantifying Android tablet apps and discovering a jewel pile is that there are different versions of the Android operating system designed to work on the tablets of different service operators, and as a result, many applications are not universal. For the sake of simplicity and, well, convenience, we focused on discussing applications that are not limited to specific manufacturers' devices. Keep reading to learn about Android tablet apps that can make life a little less challenging. Content Can be safe to say tablet users are used to getting things delivered pretty quickly. If the WiFi connection is too slow, there is potential for serious problems. (The days of recruitment are fortunately long forgotten.) We were conditioned to crave instant gratification; prompt responses to emails and texts have become the norm. As for the usual old mail... Well, we still need a way to get Netflix delivered. So what's the deal with Touchnote? The concept is innovative, but the end result seems almost fanciful - take a picture with a tablet, download it and add a message, and the service turns it into a postcard delivered to the recipient of your choice. The app is free to download, and postcards cost \$1.49 apiece in the United States (it's available in other countries, too, and costs vary). Although Touchnote claims to have an estimated delivery time of up to four days, users say it is often much longer, and the production and delivery of postcards can actually take several weeks (source: Android Market). Advertising Delays deliveries are the biggest gripe, though, and even if Touchnote donates a bit to its convenience factor, it's still a cool idea. It's a little more thoughtful, email or text, and much more personal (and sincere) than uploading the same photo on Facebook with the caption Wish you were here. PocketCloud Pro is one of the most rated remote remotes Android tablet apps, and users report that it's pretty handy as far as tablet apps go. So, what is a remote desktop app and why does a tablet user need it? After all, shouldn't the tablet provide most of what you need most of the time? Well, yes, but this app fills in the gaps for those who just can't but should, leave the basic computer behind, and the usual methods of carrying data just aren't enough. Simply put, PocketCloud Pro turns an Android tablet into a portal for full access to one computer from another. Developer Wyse Technology Inc really strives for business users, so some of the functionality of this app can be a bit extreme for the casual consumer. So while PocketCloud Pro loses points for the \$14.99 price tag (at least compared to the rest of our list), it has redeemed its security features, including encryption systems designed to protect highly sensitive business data. PocketCloud Pro also claims that users can expect to have a quick and reliable connection to their servers and a simple customization process. Advertising from the very beginning of web phones, it has become much easier to navigate the urban landscape, whether it's a journey away from home or a blazing trail around your own turf. But despite this, it still takes a considerable time to, say, decide on a restaurant. Raise one site to check the menu, another to check reviews, a third for booking... And, no tables are free... or worse, you will only arrive to find out that this is a way out of your price range. It's time to start over. Despite the fact that there are already many urban search, catalogs and restaurant applications, many suffer from the same restrictions. No other option provides so many categories in a compact, easy-to-find package, so Poynt Corporation has stepped up with a free app that makes things go a little faster. Poynt for Android is gaining points for convenience because it consolidates multiple search features in one app, automatically providing information based on your current location or any other place you put in (Poynt is quick to point out that they only access such information at your request, and will never share it.) The app even provides lists of current fuel prices at nearby stations as well as a schedule of nearby events (such as concerts, festivals and performances) that can sync with your Google calendar to remind you of the impending excitement. Advertising Once you have decided what to do, you can take action right through Poynt. Need movie tickets or restaurant reservations? Poynt provides you need and you will soon be on your way. If you prefer to travel with your surroundings, Poynt will sync with your tablet's contact list, let you know if someone is living or working nearby, and ask if you want to give them a call. Or, you can just tap the screen to share the details of your chosen entertainment, and be on your way. Google Docs is a cloud storage service for documents (as the name implies). But that doesn't mean it's loaded with restrictions. Google Docs allows users to work with text documents, presentations, image files, and spreadsheets. Document holders can provide employees with different levels of permission (such as editing, sharing, or reading only), and files can be changed even on the go. One of the coolest features is the ability to take a picture of any printed text document, and when downloaded, Google converts the photo into a Google Docs file. The service is free and, as Gmail users already know, there are almost no storage limits. In many cases, when there is overlap between the service and the application, it is difficult to tell where one really ends and the other begins, raising the question of whether the application is really necessary. If it's faster or easier to go straight to the source, the app is usually somewhat unnecessary, existing just so its developers can say it is there. But Google has never been about superfluous. True, the search engine may come back with worth-of-life links, but Google services tend to be clean and elegant, basic without skimping. And it makes sense that Google's designed app for Google's finely tuned service, designed specifically to work on a Google-owned platform, will epitomize everything Google stands for. It is not surprising, therefore, that PCWorld Magazine reports that the Google Docs Android tablet app is notable mainly for its particularly well-designed integration with the Google Docs web service (source: Strohmeier). Advertising Multitasking is convenient, isn't it? If you've already spent a few hundred bucks on a tablet, why shell out more for an electronic reading device? The Kindle for Android app brings most of the functionality of the Amazon Kindle right to the tablet, and it's designed to take advantage of Honeycomb's best assets. The screen has been optimized for great page viewing and easy menu navigation, while the touch screen makes for fun flipping a page with a natural feel. Look for dictionary words and look for text for names, places, or favorite scenes. If you have a Kindle app on more than one device, Whispersync will store and sync your seat with other devices, as well as any notes or annotations you may have made. Kindle for Android app is free, and most new and recently released e-books are available on Amazon for about ten bucks (although there is a significant and growing collection of free downloads, including classic books and some magazines). So borrow a kindle friend, make your Android multitasking a little harder and shed a bit of weight off your tote bag. Advertising is a free dropbox app, Inc. Like others appearing at the top of our list, Dropbox is not just for Android tablets; to do so will defeat the goal. This app makes it easy to access and your important things for each of your computers and computer gadgets with an internet connection. Want to get a backup time for a backup document, share a photo, or have a document ready to be updated on the go? Drag the file into Dropbox and as soon as it's loaded, it syncs the file with every device you've installed on. And using the functionality of cloud computing, downloaded files can be viewed and edited through the Dropbox website, also in unlikely but potentially critical circumstances, but none of your devices are nearby. This app can be especially useful for people prone to losing their mobile devices - or people with a healthy fear of theft. Keep sensitive data in Dropbox and it will be safe and easily recoverable. This tablet mobile app makes cloud computing as simple and straightforward as everyday drag. Cozi Advertising, the free cozi Group app, is another standout on the to-do and scheduling features that run on an Android tablet. Cozi is notable for the fact that it was designed to meet the needs of families. Since cell phones are now generally accepted as must-have accessories for busy kids, they might as well be used for purposes beyond texting and Facebook. Cozi allows families to sync and share lists of calendars, purchases and cases, so they're easily accessible all the time. Each family member creates a login for the Cozi program, which provides access to a family account where all schedules and lists are stored. When the list or schedule is updated, it can be pushed back to the mailboxes of other family members. The simplicity of the app encourages family interaction. Color schedules help parents keep track of their children's activities; Anyone who stops at the store on the way home can pick up pet food and ingredients for dinner and check out the items as they go. The note-taking feature allows people to leave messages for everyone to see, all in one place. An easy-to-use blog like Family Journal stores memories and photos, and can be shared with selected people outside the family account. Advertising No more refrigerators stuffed with duplicates or left completely naked; No more children scramble for a walk home from practice. Cozi can help organize the family no matter how scattered it is during the day. Evernote, as its name suggests, is one of many apps designed to allow users to record thoughts on the fly. Gone are the days of desperately searching for a lost Post-It, grocery receipts or cocktail napkins that contained a hastily written business plan for the next Pet The note-taking app saves, stores, searches and syncs the user's thoughts and ideas, from brilliant to other. With such stiff competition in the laptop-app arena, it takes a particularly thoughtful medley of features and interface to create an outstanding bit of software - there are a few stellar note apps and both mediocre fakes. Evernote Corp. seems to have hit on the winning formula: users sing praise for Evernote's intuitive approach. Although this app is not a specific tablet, it provides the bulk of its functionality: the ease of synchronizing notes on different devices, from the phone to the tablet and the computer. Thoughts can be recorded in the form of a voice, photo or type. And, of course, Evernote only records ideas; it cannot distinguish between bright and banal. Therefore, when a discussion becomes mandatory, the app can exchange notes with designated employees for feedback. Advertising Oh, and one more thing: Wealth of Evernote features are available for free. See what can happen when good ideas are written for posterity? Mind displaying the current generation that we used to know as brainstorming... and it just sounds a lot more interactive, with good reason. Mind mapping software has been around for a while - it's a fun way to plan projects and develop connections between ideas. When these time-tested techniques merge with a slick Android functionality and a bunch of new school features, mind mapping sheds some of its scare factor. What is the point of a software that takes so long to learn that the inspiration just disappeared? Kinesthetic Ltd is charging \$4.94 for its top-rated Thinking Space Pro, and users report that the cost is worth upgrading from the free version. The main app allows users to illustrate ideas with links to connect color notes and icons. The update allows the file to be hyperlinked so background information remains at hand, developing and preserving custom styles, as well as tagging and organizing projects with folders and categories. Whichever version finds its way to the tablet, let's face it: almost everyone feels more creative on the touchscreen. Advertising Is Hard to Improve on Something As Simple and Time-Tested as a To-Do List, but the handy and well-chosen features of Due Today show that gadgets are evolving complexity, done well, can still feel intuitive. The basic handwritten bullet list is an adequate friendly reminder, but when real motivation is needed, nothing beats a tablet or a high phone alarm. Lakeridge Software charges \$2.99 for Due Today, which, despite all its tech integration capabilities, is worth upgrading from pen and paper. Because of today's sorting and tagging function to keep all relevant information at hand - don't scramble to remember what a particular task means and why it should be done. When a user adds a new task to Due Today, the item may be given context (e.g., classified as a work project, home homework or sending a birthday card). Projects can be broken down into sub-projects, so users can design contours on the go, and no job element is forgotten. Thanks to today's alert feature is one of the app's most appealing features. Alert Alerts be set for one-off or regular housework. Remember birthdays, anniversaries, and meetings with weekly, monthly, and year reminders, or sync with Google Calendar to import existing commitments. When you enter a new task that starts at some point in the future and may now be delayed in favor of more immediate responsibilities, setting the start date will issue alerts when the time comes. Because of today can also put pressure procrastinators to play catch-up. Sometimes, when re-prioritizing on the fly, some things just won't be done. Due Today understands that custom-friendly app alerts can be configured to issue hot ticket reminders in past days. Forget to install a reminder to bring your Android tablet? This is no reason to blow off the agenda for the whole day. With today's synchronization feature, it can push your information to your smartphone or computer. Keep reading for more information about performance apps, Android tablets and other related topics. Tablets can be used for online shopping or to compare prices when shopping in physical stores.
