The latest update to the Android version of Google Docs adds that may be the best feature of all: co-editing. While you've always been able to edit a document along with many other people in the web app, android users can now join through their home app on their phones or tablets. In addition, this update brings rich text formatting, so you can add things like ordered and bullet lists, color variations, and standard text styles, both bold and weird. Check out the video above for a quick look at these new features, or just download the app to try them out for yourself. Collaborate and edit anywhere with updated Google documents for Android, Google's official blog via Engadget Opera Version 48 Opera Browser for Android automatically blocks the dialog cookies. The update also includes new launch options and small UI fixes. The update is rolling out now. It's not fun when you visit a website and are presented with those we use cookie dialogs. That's where Opera Browser for Android comes in, since version 48 ensures that you see as few of these silly annoying hints as possible. If you go to the Ad Lock section in Settings, you can now block cookie conversations. Once you've checked this out, Opera uses a combination of CSS and JavaScript detection to block as many of these annoying conversations as possible. Cookie dialogue blocking is no fool-proof, but Opera said it successfully tested the feature with 15,000 websites. Keep in mind that the feature doesn't block cookies; it just blocks their dialog windows. Cookies will still be held with the ability to automatically accept cookie conversations. It's worth remembering if you're the one who blocks cookies when you browse websites. The update also throws in some startup options to customize how you use the browser. For example, Opera includes a new setting that allows you to close or save open tabs when you leave the browser. There are also new settings that control how Opera reopens active tabs when you use the browser, and allow you to install your own home screen label. With the update, Opera also saves your credit card information from the purchase, includes text size settings that affect the overall layout of the website, and throws in some small user interface changes. For example, there is a new clear data dialogue, autocomplete improvements that make it easier to delete unwanted records and recent searches, and a force-key zoom for each website. Filters customize light, and crop color and turn undo edits How to use filters Anyone who has spent time uploading photos to Instagram is probably pretty familiar filters. These specific effects allow you to customize the entire photo with a single tap, layering the photo to look specific to a specific In Google Photos you have access to 13 different filters that you can use. There are a number of different ones here, including an auto filter, and several black and white photos. To apply the filter all you have to do is scroll through the options and choose the filter that you like the most. Open Google Photos. Click on the photo you want to edit. Tap the slider icon at the bottom of the screen to open the editing tools. Swipe through the filters and choose the one you want to use. Click Save to save the filter on the photo. The first filter you can choose in Google Photos is the amazing Auto mode that tries to figure out the best combination of exposure, saturation and other settings. It doesn't always work, but clicking on an auto can have a big positive effect on your photos. Give it a shot! Open Google Photos. Click on the photo you want to edit. Click on the pencil icon at the bottom of the screen to open the editing tools. Click Auto and see the results. How to adjust the light, color and pop Ability to adjust the balance of a white photo may be the key to keeping a photo that is too bright, or too dim, in equal measure. With Google Photos you will actually get access not only to sliders that will allow you to adjust the light, but also the color and then pop. With light and color you have an extra option past the original slider bar. You'll be able to adjust the exposure, contrast, whiteness, glare, shadows and vignette for light. With color you can adjust the saturation, warmth, shades, skin tone, and dark blue. Each option is available to use with a slider bar to have the most control over the final product of your photo editing. Open Google Photos. Click on the photo you want to edit. Tap the slider icon at the bottom of the screen to open the editing tools. Click on the bar slider icon in the bottom middle of the screen. Use sliders to adjust the light, color or pop of your photo. Click on the arrow next to the light or color to open the extended options. Use slider bars to make additional changes. Click Save in the top right corner of the screen to save your edits. As you trim and rotate photos there are times when you take a photo and you have to adjust it a bit before you are ready to download. You may need to crop the photo to make sure there is nothing unsuitable for social media lurking in the background, or you need to rotate the photo so that it is lined up properly. You also have the ability to zoom in on the photo. Open Google Photos. Click on the photo you want Tap the slider icon at the bottom of the screen to open the editing tools. Tap the crop icon in the bottom right corner of the screen. To adjust the angle of the photo, use the slider bar at the bottom of the screen. To rotate the photo, click on the rotation icon to the right of the screen. To change the ratio of the sides, click the icon on the left side of the screen, and Click on the ratio you want. To zoom in on the photo, pinch your fingers to zoom in. To crop a photo, use your finger to drag the corners of the photo to where you want them. Click Finished to save your edits. As you undo edits there are times when you finish editing a photo and realize that something about it is just looking. No one wants to upload a photo that looks blunt due to excessive saturation, for example. That's why it's so easy to undo all those crazy edits you just applied to your photo with just a tap of your finger. Note: Google doesn't make permanent changes to any of your photos, so any edits can be undone as long as the photo stays on Google Photos. Open Google Photos. Open the edited photo you want to return. Tap the overflow icon, which looks like three vertical dots in the top right to the right of the screen. Click undo the edits to remove all edits and return the photo to its original form.
