Looking for a good browser for your Android device that is better than a factory? Download Google Chrome and enjoy all its awesome features right on your android smartphone. Chrome is a web browser developed by Google. It was available from September 2, 2008 for Microsoft Windows, and after a while, Google developed one for all other devices including Android. It's a very simple and easy-to-use app with a lot of amazing and useful features. When you open the app, you can see google search bar and all your most visited websites according to this. You can click on them to directly go to the esteemed website, or you can search for anything you want on a search bar. At the right end of the search bar, you can also see a microphone icon that you can use to say what you want to search on Google, and it works quite efficiently and efficiently. If you want, you can also put a Chrome widget on your home screen, and whenever you want to search for everything you can say Ok Google and it's going to recognize your voice and ask you what you want to search for. After a recent update, it also got a new feature where it shows all the latest news related to the search, which can be very useful when you want to check about something very quickly. It's a good app in terms of speed as well. It works on almost any phone flawlessly, without slowing down. The Google logo at the top of the search engine also changes if there is an event or something that happened that day and you can click on it to find out more about what happened that day. Now, as far as the user interface is concerned, it has a very simple and minimalist type of look without inflating at all. In the top right corner of the screen you can see a small box with a number written on it. It shows you how many tabs are open, and if you want to interact with other tabs, you'll have to click on that square box to see other tabs. If you want to open a new tab, you'll also have to go to the same place and click on the icon in the top left corner of the screen. Right next to the tab button, there's a burger menu icon that shows you more options as you can restart the page, bookmark the page, and download the page if it allows offline browsing. Below these options, there is the option to open a new tab, a new tab incognito, look at bookmarks to check your history, see your downloads and settings menu buttons. If you click on the tab button incognito, it's going to open a new tab, but in this mode, everything you're looking for won't be in the search history, and everything like the cookie is also not going to cache. But he's also going to tell you that you're not your ISP and the websites you visit can see who is visiting their website. This is useful if you want to search for everything you don't want to show on your search history. After that, there are bookmarks where you can see all the bookmarks saved. You can also put bookmarks in your folder if you want to keep it easy to find. The latest tabs and history are almost the same. The main difference is that in the latest tabs you can see all the tabs that you closed that day or so, and the story where all your searches belong. You can see all your searches there, and if you want, you can also remove them from there. Right under the story button, you can see the download button. Underneath this button will be a list of all the things you've downloaded, in the form of a list with the date, time, name and size of that download. Now if you go to the settings menu. You can see different settings for the chrome browser. You can set up your Google account on this app and it's going to sync everything like bookmarks and stuff with other devices with the same account on that device, making it easier for you to use bookmarks right from your Android smartphone. You can also customize commonly used passwords to make it easier to log into various accounts on the Chrome browser easily. If we are in the details, we can see the following options. Under the heading Basics, you can change the search engine from Google to Yahoo, Bing, Ask or AOL depending on your personal preferences. According to Auto-filled and payments you can customize your address and payment information, making it easier for you to fill out information about your address or if you want to buy something from Chrome, you can use this feature to fill out a form on this site. You can then set up passwords for different accounts or different apps. So whenever you want to log into another account, you can use this to log in easily, quickly and efficiently. You can also set notifications for various things and websites so you can get updated when a new video or article is on that site. If you don't want this feature, you can also disable this feature and you won't be sent any notifications again. Now you can also set up your homepage to another website. What it does is when you open chrome, it's directly going to take you to this site like Google. After that, under the headline Advanced, there are more useful options that you can change to further personalize chrome to suit your taste. The first option is Privacy. Inside this tab, you can customize various things like secure browsing, searching and site offers, accessing payment methods and other useful things. On there is an opportunity to clear the browsing data that is going to clear the story, cookies, site data, and cache. After that, there is the Availability option. Under this option, you can change text letter, zoom in on websites, and include a simplified view that changes the text font to the easy-to-read supported websites. After that, there are website settings that you can use to customize what you want to show and what you don't want to show on the website and what kind of things you want Chrome to give to another site to make it easier for you to use. In these conditions, there are languages and data savers that you can use to change chrome languages, as well as to save the Internet, turn data Saver on or off. After that, there is another download button that lets you set where you want to store the things you download, as well as change the location of the stored file. There are also various plug-ins and apps specifically designed for use in the Chrome browser. One example of this is Grammarly, which is a very popular plug-in used by many chrome users. As the title says, it lets you know all the errors in your articles and corrects it, so you don't get any grammatical or any errors in your article. They also added a good feature some time ago, called offline browsing. You can download any web page that supports this feature, so you can read it later, even if you don't have internet access. This is very useful if you like to read things from Google. You can easily download the offline page of this website and view it later in your car or on the bus, where there is no access to the Internet. There are also options if you don't want to share cookies. Cookies are information stored on your phone that can be accessed on the website you visit to show you content related to your search history. It also helps them show ads related to your search history that you've been looking for in the past. Here are some of the features you'll get with this app: Offline View, this app lets you browse supported websites offline or when you don't have internet access. Free to use, Google Chrome is free to use without hidden fees. Great Private Mode, it also offers a private mode, also known as incognito mode, that doesn't save your Google searches in search history. Supports logging into your Google account, you can log in from your Google account and nothing like the bookmark that is available on other devices will be shown on that device as well. 说明Gugl的顶级免费浏览器 适用于Vindow和Mack的Goodl Chrome浏览器是由互联网巨头Gugle开发的免费网络浏览器。 Chrome旨在为用户提供快速便捷的浏览体验。这是其用户界面相当简洁的原因。 Google已通过内置的强设置、信息和cookie管理工具,努力使其浏览器成为安全的浏览器。 一台计算机可以同时具有多个浏览器。 这意味着您在计算机上安装Gugle Chrome时不必删除资源管理器。 实际上,高级用户出于不同的原因使用不同的浏览器。 对于拥有基于Window的计算机并满足以下条件之的Internet用户 Chrome is the best choice: connect to the Internet slowly. They need an updated browser. They are not technical experts. Google Chrome speed is one of the fastest browsers on the market, if not the fastest. There are several reasons: the simplicity of the interface (only slightly below the minimum requirement) allows you to use very little RAM. Even if extensions and plug-ins are installed, the page doesn't load when downloaded, so the user won't have to wait. It always uses the latest JavaScript engine. It has the function of pre-selecting DNS, can improve the download speed of various web pages. It relies on Google servers. Automatic update Google Chrome does not rely on users to update, it's just self-updates. Whenever Google releases a new update (often running), the file is installed. As a result, many users don't know which version of Chrome they've installed. To find out, just tap the key icon in the top right corner. Security These updates always contain updated versions of malware and phishing databases, so users see alerts every time they visit listed sites. Security and privacy are one of the key features of the browser. Customized home users can set up a homepage that Google Chrome displays when a user opens their browser. There are two options: sketch labels for the most visited sites can be changed to your preferences. An icon for an installed app. The bookmark bar has a yellow star in the top right corner next to the key, allowing users to save the pages they visit. They can be stored in a bookmark bar or in a hierarchy developed by the user or in another structure. Bar bookmarks can remain visible or hidden. One of the biggest advantages of Google Chrome expanding Windows Chrome is the variety of extensions it offers. These extensions are apps that the user decides whether to install in the browser. The solution is personal and depends on the needs or interests of each user. By default, Google Chrome installs three of them: Google Search Engine, Gmail and YouTube. From games to social networks and utilities, there are a number of extensions. While most are free, some are paid or paid versions. This is a link to our proposed popular plugin. It's important to only install the extensions you need so you don't have to affect your browser's performance. Google Chrome and its relationship with Google Chrome are called Google Chrome for a reason. It is a Google browser and is designed to be optimized for search. Search engines are one of three extensions that appear in the default launch window where users simply enter terms and click Enter to perform the search. Data Synchronization and Google Services Google offers a variety of services. From gmail to Google Maps and YouTube social networks. If you use any of them, your browser will allow you to sync them all to log in at the same time. This synchronization keeps your bookmarks, extensions, preferences, and topics in the cloud. This means that when you sign up for Google, Google, Incognito navigation in Google Chrome. Like other browsers, Google Chrome lets you browse without tracking. In this view mode, the program does not track or store data on the page it visits. For example, avoiding tracking means that cookies are not stored, resulting in fewer ads for users. This option is disabled by default. To activate it, go to the configuration menu (key): Show the extended Select Send Don't Track Request options in views. One of the reasons Google Chrome is so popular among other profiles in Google Chrome is that it's easy to create multiple profiles. In short, profiles are different parts of the browser where users can store bookmarks, search history, and so on. If you share a computer, it's a good idea to have more than one profile. This means that each user can have their own profile and access their own data. Creating multiple profiles on Google Chrome is useful, even if you only have one user. This allows you to manage different social media accounts and separate professional activities from personal activities, etc. If you're looking for a fast, secure and easy-to-use web browser, Chrome is your browser. With its extensions, you can incorporate features into them as if they were modules in a very simple way. You can also consider other popular free browsers such as Mozilla Firefox, Microsoft Edge, Opera, or other widely available free browsers for Windows. Technical name: Google Chrome 85.0.4183.102 Windows Requirements: Windows 8, Windows 7, Windows 8.1, Windows 10 Languages: Chinese: Chinese, English, German, Spanish, French, Italian, Japanese, Polish License: Free date: Thursday, June 20, 2019 Author: Google d1775ee643ec69af641795d92d71ac7e70457d4In this version of Google Chrome 85.0.4183.102 has no updated information. Sometimes, it takes a while for the publisher to publish the information and it takes a few days to go back and see if there are any updates. Do me a favor!
