Operation Temp. Humidity V entering 5V Output Charged Shift 3.7V 800mAh Li-ion battery 80hours -40 C to 85 C -20 C to 55 C 5%-95% non-condensation 5 Using 5.1 SIM installation card Make sure there is no call transfer and call display on, and PIN code is off. The SMS message must be text format, cannot be identified for the PDU format. Steps: Open the back cover, and choose the battery Push the foil up according to the arrow on the foil and download the miscro SD card and push back the put SIM card in the holder as shown in the picture. 5.2 Battery and charger charge the battery to capacity in 8-12 hours for the first time. Please use the battery and charger provided by the manufacturer. This unit takes a built-in Li-ion battery, and a full 5 6 battery can 5 80 hours. After the first use, the battery usually has to be charged completely in 3-5 hours. Warnings: A: For it's Li-ion battery, which contains harmful chemicals and can burst, please t bump, pierce it violently and keep it off fire. b: Please charge the battery in time to keep it running as normal. 5.3 Start Put the SIM card and battery in place. Turn on the device outdoors by pressing the on/off button for 4-5 seconds until the light flashes. For the first use, please initiate the device and restore it before setting it up by default. (Please refer to 5.4 for training.) After 10 or 40 seconds, the device will start working and acquiring GSM signals as well as GPS signals. The light will flash every 3 seconds when the device receives signals. When this device receives GPS signals normally, you can use it and any settings as instructions of this guide. 5.4 Initialization Send #begin password in SMS to the device, it will respond to start normal and initiate all settings. (Default password.) For example, send an SMS #begin 123456 to the tracker via mobile phone, if it succeeded, if the answer start to normally Reply message with reference Google 6 7 7 #smslink SMS to the device, it will respond with a message on the Google link. For example, change your password set: Send sms: #password old password to your device to change your password. For example, please send sms: #password 123456 to the device terminal, he will answer sms: password OK. The new password changed in success Make sure that the new password in mind you have to download the software to restore the original setting in case of loss of a new password Make sure that the new password is in 6 digits Arabic numbers, or the tracker can not recognize the password. 5.6 Authorization There are only 5 cell phone numbers that can be allowed, be sure to set the authorization phone number before you use the call tracker 10 times continuously and get the position correct, then it will do the mobile phone number as an authorized number automatically send SMS: #admin password mobile phone number to create an authorized number. The remaining authorized numbers must be set by the first authorized number. If the number is successfully authorized, the unit will respond to the administrator normally! IN SMS. If you set up a second authorized number, please send an SMS #admin password, the first authorized number, the second authorized number, send an SMS: #noadmin'password' authorized number' to remove the authorized number. 7 8 5.7 One-time location If there is no authorized number, when a number dials the device, it will report geo-info. If there is already an authorized number, then it will not respond when an unauthorized number calls it! When the authorized number dials the device, it will hang up and report real-time Geo-info as below: Location tracking. When GPS signals are weak, latitude position and longitude included in SMS is the position that the tracker received GPS signals at last. If it differs in its exact current location, pay attention to check the time included in the SMS you received. 5.8 Get a geographic location you should set up the APN of your local GSM network for the SIM card in the tracker before using this feature, if there is a username and password to log in to GPRS, please refer to the APN setting, username and password for GPRS login, 8 9 5.8.2 After setting up APN, send: #address password to the device, it will answer SMS, including the absolute street address. For example: 50 meters around the Viennese hotel, Tsinghu community, Longhua, Baoan District, Shenzhen, Guangdong, China. 5.9 Auto Track Send SMS commands #fix 030s 005n password to the device tracker, it will report Geo-info at intervals of 30s for 5 times. (s:second, m:minute, h:hour). This team option should be in 3 digits, and the maximum value is 255. (remark: when the tracker doesn't open a function downloaded by data to the tracking system) Automatic track time: Send SMS #fix 030s'n'password to the tracker device, it will answer Geo-info continuously at intervals of 30 seconds Send an SMS #nofix password to the tracker device. Note: the interval should be at least 20s monitor (voice surveillance) Team to switch between track and monitor tracker and monitor mode default track (tracking status) Send SMS #monitor password to the device and it will respond to the monitor normally! And switch to monitoring mode Send SMS #tracker password to the device, it will meet the tracker normally! and recover to track Auto Storage: When the tracker device lost GSM signals or fall offline from GPRS, The tracker will store the tracking position and alerts automatically in the blink of an eye on pre-set conditions, when GSM signals return, all event alerts will be automatically sent to an authorized 9 10 numbers or monitoring platform (server), but stored tracking data must be uploaded to the monitoring platform via SMS commands : Storage permission: send SMS: #clear password to the tracker device, it will respond clearly OK: Storage volume: Built-in Flash 1MB (shop 7000) External support card TF 16 GB in most Saved data will be sent to the tracking system via GSM-recovery signal, and can check the history data on it Vibration alarm It is disabled by default, send #vibrate-class level password to the tracker (the level of the class can set 5 levels, 1 is the lowest, 5 is the highest), the tracker will respond to vibrate normally!. A vibration alarm will be sent to an authorized phone number when the tracker is being shocked, and one alarm for each trigger is a shock event. Cancellation: Send #novibrate password to undo the vibration alarm, answer novibrate OK 5.13 Geo-fence Setting geo-fence for the block to limit its movement within the area. The device will send a message to authorized numbers when they break the area setting: When the device stays stationary in place for 3-10 minutes, the user can send an SMS: #stockade'password'semidiameter'time'latitude-longitude) to combine to set up a restricted area. In the event of a breach, it will send SMS alerts to authorized numbers every 3 minutes. Note: #stockade 123456 x 500 x 60, 500 is a seven-range lap; 60 is the actual time, if the car exceeds the range, it will send 10 11 alerts to the authorized number in 60 seconds (the actual default time in the second); Latitude and longitude represent the current location Cancellation: Send SMS: #nostockade password to disable this feature Excesso de velocidade alerta Setting: When the device remains stationary in place for 3-10 minutes, the user can send SMS: #move password to the device, then will respond to move normally!. In the case of such movement (the distance of the unit by default is 200 meters), it will send SMS alerts, please note the alarm shift to authorized numbers every 3 minutes Cancellation: Send SMS: Send SMS: #nomove password to deactivate the traffic alert Oversped alert Setting: Send SMS: send SMS: #speed password rate number in 3 digits to the unit (suppose , speed 80 km/h), for example, send SMS #speed 123456 080, and it will meet the speed normally!. When the car is travelling at speeds in excess of 80 km/h, the device will send an SMS alert signal to the authorized number Cancel: Send SMS #nospeed'password) to deactivate the super-speed alarm. Note: The recommended speed should be at least 20 km/h. For below this speed, it will be carried by the accuracy of GPS drift signals, etc. SOS button Click SOS within 3 seconds, it will send SOS alarm and geo-info to all authorized numbers Low battery charge When the tracker is installed authorized number, battery capacity is less than 10%, the tracker will send alerts to the authorized number, for example: Low battery, 11 12 5.18 State Check Send SMS: #check password to the device tracker, it will respond to current status via SMS, as: Electricity: 100% GPS: A/V GPRS: open/closed battery: 100% IMEI verification Send SMS commands #imei password to the device. For example: Send SMS command #imei 123456 in the device, imEI number in 15 digits will be answered to your mobile phone Terminal (local) Time Installation Note: England 0 time zone default Send SMS #time zone password (s) hour minute. If you install OK, it will respond time normally. For example, if you send an SMS #time zone 123456's0810 to GMT-8. S is an established time code, 08 represents a different time zone clock, 10 represents a different minute GPRS setting The user must send SMS via mobile phone to set up IP, port and APN before the start of GPRS Setting APN APN standards for access Point Name and differs from country to country. For more information about the local APN, request with your local network operator GPRS Text tracker SMS #apn'password'apn content'apn user name'apn password via mobile phone, and if it has managed to set up, the tracker will return the message to APN OK. 12 13 for example send SMS commands #APN 123456 CMNET. If successful, APN OK is returned by tracker in SMS. Notes: Contact the password tracker and CMNET is APN content China Mobile (one of the GSM operator in China, it does not have an APN username and password). If there is no APN username and password, then there is no need to write APN username and IP password and port setup Send SMS, as below, via mobile phone: #adminip'password'ip address Port number. If you have succeeded, adminip OK is returned by device in SMS, for example, Send SMS command #adminip 123456 #9000 to the tracker device, if it succeeded, adminip OK returns the device to SMS. (default password, is IP, 9000 is port) 5.22 Switch modes between SMS and GPRS Default Mode GPRS Send SMS #noadminip password to the tracker, it will respond normally and switch to GSM mode Send IP commands to switch to GPRS web platform mode and PC installation software web
