Package Title: com.and.games505.Terraria Version: 1.3.0.7.9 (200390) File size: 103.8 MB Updated: August 17, 2020 Minimum Android version: Android 4.3 (Jelly Bean, API 18) MD5: 520392020202c14c7758ffb6cb4a3f755 SHA1: 15ff2ab6e548bdd9a0cdf823049f02402409024095e5 Pixel style of a wonderful world, wonderful world, Terraria is a mobile version of the game picture and touches the PC version and the same using very sophisticated 2D pixel images. Joined many modern image technologies such as soft lighting changes and so on. The most beautiful part of the game or another bPhonephere has a different color, every time you enter another bPhonephere, you will feel the obvious changes in the picture: some of them are sunny, some dark overcast forests. The same is true for music in games, with different sounds in different environments, but most of the time you should hear about that screen title and popular music song themes all over the world. No matter when the rhythm of the game is very light and pleasant electronic tone, which is the biggest feature of the game, the overall level of many games will be much better than that of many, each capital city can give people a deep impression. Ultra-high degree of freedom. The goal of this is very simple, you can wander aimlessly, build a broken house, live a quiet life. You can also go to the BOSS challenge, collecting resources, kill a small BOSS, attract NPCs, build your own castle and village, embark on a daring adventure. In addition to acquisition and synthesis, another characteristic of the game is, of course, high plasticity, without any basic lines, completely free world development. Left snow and ice, going to the right a huge desert, down a dark hell, up the sky of the island, the whole world can destroy and build, go to hell will have to cut through the earth to go to the island to put up the sky tower ... The game world is also divided into day and night, after all, how to make the game themselves players decide to create their own. You can get resources from different places to build your own castle, synthesize your own tools, equipment, furniture and other essentials. Every inch of the game ground can be destroyed, as long as you have free time, you dig the whole map into the pit of no one tube you. Of course, with the deepening of the game, the resources needed to find a more dangerous place. It's a great degree of freedom, but the main line is also a very clear and outstanding game. The main pleasure of Terraria is the natural acquisition and composition. In the world of Terraria, almost everything you see can be broken, and the fragments fall out as material. As long as the material and conditions are sufficient, at any time, anywhere can be synthesized. And I don't think it's a medieval fantasy story as the game progresses, laser swords, circuits, And other high-tech can also be used. How To How to synthesize, it's the main fun of the game, and constantly discovering and creating new things, each to explore it! In fact, the only drawback of the mobile version I think it is not anything that reduce content, but bad work. Although the game has been very thoughtful optimization, but still can not decide how to put the elements or elements in the right place, as well as the full spectrum polygon is a good move, it is also set the transition button, it can be said to be the biggest failure to work. However, it can still because of its degree of freedom and extremely rich content, as well as a good understanding of the rhythm of the game, become a very fun rare piece of excellence. In addition to working outside of the gaming experience and the PC version is not much different. Even if the content is reduced, but the game still provides enough time to kill huge content. There is no doubt that this work should not be missed. If a conditional player can consider having a handle ... This touchscreen operation is very inconvenient. - APKAward.com Terraria is a sandbox 2D game with gameplay and land adventures, revolves around exploration, construction and combat. Players start the game in a procedurally generated world, and they will get three main tools: a pickaxe for mining, a short word for combat and an axe for woodcutting. When you mining or exploring underground caves you will find many resources and, in particular, ore, and these items will accumulate on the basis of a limited amount of health and a magic point. The player will use the resources he has received to make the new items and equipment that he needs. In Terraria this adventurous world, you will meet many different enemies such as zombies, demon eyes, simple slime and various specific enemies of the region. In this case, you can use your weapons, swords, weapons and magic spells. If the monster boss is defeated, you will get rare items and a large amount of in-game currency, and often get progress. The game has many untested characters, such as a merchant, a nurse and a magician, they built a room. But if you accomplish some special goals (such as defeating the boss or getting a weapon), you can attract these NPCs and occupy their structures or rooms. Of course you will find some NPC when you explore the world and then they will live in your home. Sometimes you can trade with them, use coins to buy items, or sell items for them to get coins. Coins can be obtained by killing monsters, finding treasures and selling NPCs. Every world is unique - from floating islands in the sky to the deepest level of the Underworld. Adventures at the ends of the earth, and battle villainous bosses along the way. Along with the standard gameplay, there are also fashions that can improve the world of Terraria. If a player goes to the Underground and calls and defeats the call boss A wall of flesh. The game is part of a hard mode that adds many new and much stronger enemies around the world, as well as new NPCs, bosses, ores and items. If normal mode can't meet your needs, you can choose an experienced mode in which it's hard to increase by doubling your health and attacking monsters and bosses.
