Whether your Android phone has an amazing camera or mediocre, there are many apps in Google Play that will help you take the best photos with it. We believe that the FX HOOM camera is the best of these options, not only because it packs powerful features, but it will help you learn how to make better photos as well. The FX camera is still our favorite camera app for Android, but it's been a while since we reviewed its features, tested the competition, and explained why it's still our choice for the best you can get. The SUOM FX camera has grown a lot over time, and while the competition is strong, we still feel it deserves a nod. Here's a fresh look. Camera zUM FX Platform: Android Price: \$2.99 Download PageFeaturesAuto-Focus and click on focus modesHardware customization options, including white balance, night mode shooting, ISO, focus accounting, exposure, contrast, saturation, and more (as long as your equipment supports it) gesture and multitouch support, including a pinch to zoom in, click to focus, and click to shootBurst shooting mode, which supports up to 20 shots per secondCustomizable mesh attachment (so you can use the rule of the third Horizon level indicator (never to be photographed again)Stable shot meter and shooting mode (with crosshairs, That flash red when the camera moves)Setting all the hardware buttons on your phone and assigning them to camera functions, such as zooming in on volume-controlled time spans for shots and long exposures ofSelf TimerVoice and sound-influenced triggers: Clap or speak to take a photorear and control shutter ControlOver 40 different photo filters and effects such as sloping shifts, vignettes, LOMO, retro, toy cameras, and PolaroidDozens photo presets for one-touch personalizationReal-time digital zoomGeotagging photos using your phone's GPSPreserves EXIF and other metadata with your photosAutosave images when you take theirLive previews of photo effects and filters before applying themSt any editing tools, including so you can build an instant collage of photos that you just take , Twitter, Flickr, and moreDownloadable leather packs, borders, frames, props, shutter animation, and other additionsTho it excels camera zUM FX is even more packed with features and photo tools now than it ever was. The app does a great job of giving you end-to-end photo shooting, editing and sharing experiences where you can use the app to take great photos, edit and touch them the way you like, add and other post-processing and then share it online or with friends on Twitter, Facebook, or any other app you want to click on the photo. Even if you don't use editing or customization features, it's still a fantastic camera app, packed packed composition tools, timers, audio-controlled shooting modes and settings to help you take the best photos with your Android device. These are the composition tools that really send the FX camera over the top though. Many camera apps have stickers and frames and filters, and that's fine if you like to use them, but it will actually help you build the best photography habits by teaching you the rule of thirds, looking for a golden ratio in your shots, or by helping you make sure you level with the horizon. A stable shooting mode will make sure that none of your photos are blurred or poorly focused, and click on focus ensures that you always highlight the object you want to be in the spotlight. Best of all, each of these features is so easy to use it's refreshing. A lot has changed in the world of android camera applications since we originally crowned Camera S'S FX as our favorite, but what hasn't changed is the developer's commitment to adding new features, improving existing features and updating the interface and layout of the already great camera application without dropping support for old devices and various hardware. The FX OM camera is still the winner, and is usually a bargain (it's often on sale at least 40% off), and a huge improvement over almost any stock camera app. We keep trying other apps and we still think it's one of the most powerful. Where it falls the short camera of the zUM FX is great, but it's not perfect. It's long been missing HDR mode, as some other camera apps have stepped up to turn on, and it can't take panoramic shots even if your hardware supports panorama photography. It's a bit of a bummer, but given the widespread support for OS apps (Android 1.6) that may have something to do with it. However, given other camera apps definitely have these features, it's a bit of a thorn in the side to find them missing. It's important to remember that the FX CAMERA is at best a replacement camera app, even if it's trying to do a little bit of everything. What it does, it does well, but if you're looking for all the filters and tons of photo effects for what's available here, you'll have to look at some of the apps below. Similarly, if you want more detailed editing and post-processing features, you should look elsewhere. Both of these things are OK though, since we're talking about the camera app here, not the personalization app or photo editor. The FV-5 camera contest (\$4, Free Lite version) has been around for a while, but only recently it's gotten good enough to really pay attention to and the boy did it get it good. It packs in tons of features, and developers have moved on to adding useful shooting features over and effects. You can control hardware settings such as white balance, exposure time, diaphragm, light meter and so on, and the viewfinder even has an RGB histogram right here, here, in real time. You'll find all the other useful features from other apps here too-tilt-shift shooting, auto-focus and click-on focus, long exposure support, work. Its only drawback is that the interface can be a bit overwhelming as a result of all the features. The vignette (\$3) is still around and kicking, and it's a great option if you're looking for an elegant shooting interface and more filters and post-processing effects than you can shake the stick on. It looks great, it's a joy to use, and can do a lot of other apps here can do, including tilt shift photos, cross-process, duotone, LOMO, toy camera, and more. The only downside to vignettes is that, being elegant and useful, it's also a little easier on features and shooting modes. Still, if other camera apps are overkill but you still want to step up from the stock, try it out. Cameras360 Ultimate (Free) grew out of the old Camera360 app, which was most notable for its HDR shooting mode. The latest version so far has it there, along with some other useful features such as photo effects, fast sharing, support for Sony's phone-mounted lenses, and a very easy-to-use interface. The interface is great at guiding you straight to the type of shooting mode you may want, but the problem with the app is that it's gotten progressively bloated and bogged down with features that aren't too useful and have little to do with taking good photos-just gimmicky ones. It also got to be the biggest of storage pigs, weighing in at 21mb. The focus camera (free) we mentioned earlier is better known as the camera that used to be complete with CyanogenMod. It's available now as a standalone download, and packs features such as HDR shooting, panorama shooting, photosphere, explosion shooting modes, self and auto timers, and more. This little buggy on some devices is definitely still a beta, and doesn't support anything running less than Jelly Bean 4.2, but if you need HDR or panorama, it's more than worth a look. Android (4.1.): Focus, the camera app from CyanogenMod, is a pretty powerful photo and video with More Your Camera default app slightly different on each phone (Motorola will be different from HTC, which is different from Samsung and so on), but overall they don't offer a ton in the way of power. Some are better than others, and include a tap-to-shoot or tap-in focus, and some even give you these delicious equipment settings like white balance control and exposure times, but they're often buried in menus if they're there at all. They will do as a last resort, and while they are definitely a competition, their only advantage is their simplicity (which is nice, sometimes). It's obviously not Camera apps are out there, but they are by far the best. If you use one we didn't mention, please share it with us in the comments. Also, be sure to check out our list of the best photos for Android for more amazing apps. The camera in your Android device can range from exceptional to scary, depending on the model... Lifehacker's App Directory is a new and growing catalog of recommendations for the best apps and tools in a number of these categories. Good thoughts can come from anywhere, at any time. So can edit your best writing work. Keep your text handy, and ideas are easy to add, with these great writing, notes, and the idea of collecting apps for Android.For the downside of writer's mobile site scene apps, check out the best iOS writing apps. While writing in iOS may seem troublesome, with faster fingers or a Bluetooth keyboard you... Read moreSolidNote and mNoteThe auto-saving, synchronized everywhere Simplenote service has become the basis of Lifehacker thinking, and for good reason. It's available almost everywhere, it's reduced to ultimate simplicity, and it constantly saves you work, so you don't have to. This is what Adam calls the Holy Grail of ubiquitous text capture. Two Android customers provide the best Simplenote experience. This author prefers the paid (\$2.37-ish) SolidNote, but only because of the slight polish on the controls and seemingly less lag during input. mNote, a free alternative, does just as well as work just by displaying and saving your Simplenote stuff, and maybe you won't experience the same lag. Despite all the cool performance modern technology was born, the holy grail for me... Read moreSolidNote (AppBrain)mNote (AppBrain)Thinking SpaceSome Writers how to get on the page early and often, knocking out a very rough first project and then edit it over and over again. Others have ideas that they should outline, even if only the most elementary forms. For the latest crew, there's Thinking Space, a mind-mapping app for Android that makes it easy to piece together disparate ideas and pull them out later in handy form-image files, via email, however you need them. Thinking Space for Android AppBrainAK NotepadIf Simplenote synchronization is not your thing, and if you're a fan of the yellow-legal-style iPhone Notes app, the AK Notepad is probably exactly what you need. It's a simple client note, but it also allows those notes to work in and around your phone. Set reminders to note to ping you later, pin a specific note to your Android home screen, tag notes for search, and back them up on an SD card or Catch.com, the creator of another app on that list. AK Notepad (AppBrain)Evernote and Springpad Than words can enter into a piece of text. Images dictated by notes, web links, and more can be pieces of the puzzle. Evernote is installed a universal capture tool that syncs with almost every available computing platform, and its Android client has just undergone an overhaul, making it a very viable tool. But we also dug like Springpad Springpad while Evernote is still getting its Android foundation, providing a nicely different alternative. Both tools are free, and make your Android smartphone into a kind of secretary that follows you everywhere, waiting to hear your last thoughts that should end up inside work.iPhone/Android: The previously mentioned web service Springpad is a great web laptop and... Read more often All-Ins appBrainSpringpad AppBrainDroidRoomIfiesif you're a fan of WriteRoom, Dark Room, or similar green terminal-text-on-blank-black writing tools, DroidRoom continues to experience on Android. Deprived and simple by nature, it downloads and saves simple text files from the SD card, goes completely full screen while you write (notice bar hidden and all), and offers text and background settings. This \$1 in Market.DroidRoom (AppBrain)ColorNote Sticky Notes are not a performance tool. When you see them stacked on a monitor, it's discouraging. But on a smartphone screen? They can be a simple reminder. Insert your quick thoughts somewhere noticeable with ColorNote-right under your Twitter client link, maybe? - And you hopefully remember that first draft is due, by email, that person with a question, or whatever else you need to get your words done. ColorNote (AppBrain) We really appreciate your help (via Twitter) in culling together this list. If you have additional app recommendations that make it easier to write, brainstorm, and other type-y tasks on Android, tell us about them in the comments. Comments.
