Muggy Weld Super Alloy 1 Complete Set 1/8 How to Buy on site including IM discounts you can find catalogs related to the product, it is only possible to choose Muggy weld super alloy 1 full set 1/8 love and make a great order. Soon the boss will grab hold of you and answer your questions about Muggy Weld Super Alloy 1 Full Set 1/8. We all advanced warranty services and 1 jar with flux.350° F operating temperature: eliminates metal washable. Works with: propane, MAPP gas, oxyacetylene, butane, heat weapon, etc. It can be covered, painted, powder painted, thin small aluminum pieces, galvanized metal, zinc coated metals, copper, brass, bronze, steel.> See more product details. Full description not available fewer 4.24.2 out of 5 stars13 product ratings sys_afjJun 05, 2017Top reviewi is skeptical, but it works! I am a professional welder/business owner with over 35 years of welding experience metals.an antique car collector bring in several old pot metal dicast parts. I would usually weld such metal with TIG and aluminum filler. But I couldn't make him work well in that part. It was also very small, leading to additional problems. I ordered a set and did it with a torch on the propana. The secret is the flow. Having joined and built parts I mixed the repair with a grinder and snorting, then I filled with a low stain or bubbles with a soldering iron. Produced quality show Repair a pretty hopeless part!this was my first time using this product. I recommend it! Verified Purchase: Yes | Condition: new | Sold by: 1498737960@deletedby i_granite_iJan 13, 2019This critical reviewFirst time using this product. Pros: It works well for soldering sweat metal as announced. Relatively easy to use after watching some videos. Cons: contains cadmium. Almost no product for the price. 6 isos rods are a little floppy. The scale flow is in a bottle the size of a bull lighter. Not much. Finding feedback is very difficult and their product videos are the only thing you can find on Youtube.Product Comments Dialogue Reviews DialogueProduct Reviews Dial not left to make mechanical strength. Welding does not matter for welding, which they make for electrical circuits. It can work with copper, but definitely with a pot of metal does not work. I made all kinds of attempts to weld a piece that broke and didn't even heat the pieces to 350 degrees. apparently welded, but does not stick to the metal, and when the statement was made, they sent me only all the time to watch their videos again on the Internet. Product Reviews DialogVerified Purchase: Yes | Condition: new | Sold by: 1498737960@deletedby edwarmonroSep 27, 2017One, if not the best product I have used, 1940 vineyard, costs up from 1000.00 , it saved me a lot, easy and simpleChecked purchase: Yes Condition: new | Sold by: 1498737960@deletedGreat product. I did exactly what I needed to do. Verified Purchase: Yes | Condition: new | For sale from: 1498737960@deletedGreat product repair of the things listed. Easy to use. Super alloy 1 connects metals at half the melting point of metal in cashews; its copper flow becomes root beer brown when the unfavorable metal reaches the operating temperature of 350°F, allowing quick and easy repairs for soldering with little or no pre-heating. This all position rod is ideal for repairing pot metal shield and can be applied with any heat source, including soldering gun, hot air gun, or propane burner without welding experience. The industry standard for classic car recovery and antique auto applications, Super Alloy 1 has saved thousands of priceless classic car parts! Main features: pot metal, aluminum, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, bench, galvanized metal, copper, brass, bronze, steel, zinc dying casting, brass, brass, bronze, steel, zinc dying casting, brass, br belligerents and damage to the base metal; Preferred in applications requiring low temperature High wettability Works with: propane, MAPP gas, oxyacetylene, butane, heat gun, larger seeders, oven flute turns root-beer brown, when the parent metal reaches 350 °F, acts as a guide to absolute temperature Can be covered, painted, powder painted, polished, shape missing pieces Completely non-corrosive; washed with warm water 20,000 psi bonding force Note: Super Alloy 1 can not be used to repair aluminum boats, cast aluminum tables, or diamond plate aluminum. Super alloy 5 and oxyacetyl torch are necessary for these applications. For castings more than 1/8 thick, we recommend to bevel base metals with a mill before soldering. Contains cadmium. Superlegies 1 cannot be imported into EU countries due to import rules. MUGGYWELD.COM AND WELD WELDS ON AMAZON STORE ARE THE ONLY DISTRIBUTORS OF AUTHENTIC WELDING WELDING PRODUCTS. WE DO NOT SELL PRODUCTS THROUGH OTHER SITES. If you find discount KITS online, you're likely buying counterfeit product contains chemicals including [Cadmium] that are known to the state of California to cause cancer.
