James R. Edgar, Anita K. Ho, Matilda Laure, Rita Horvath, Mary M. Reilly, D. Paul Luzio and Rhys K. Roberts Shaoteng Wang, Michaela Tatman and Mervyn Meisiang Huang, Erik Modeste, Eric Dummer, Paola Merino, Georgia Taylor, Duke M. Duong, Judun Deng, Christopher Holler, Marla Giring, Dennis Dixon, Nicholas Michael G. Heckman, Patrick W. Johnson, Alexandra I. Lund, Anna-Lena Bohler, Elahé E. Bideány, Per Setterstrom, Peter M. Andersen, Thomas Brunstrom, Stefan L. Marklund, Jonathan D. Gilthorpe and Ulrika Nordstrom Present the manuscript Back to the Top When Preparing Figures, please follow the formatting instructions below. The figures should be measured in the order in which they were first mentioned in the text and uploaded in that order. Multifig shapes (with parts A, b, c, d, etc.) should be presented as a single composite file that contains all parts of the shape. The numbers should be downloaded in the correct orientation. The names of the drawings (maximum 15 words) and legends (maximum 300 words) should be presented in the main manuscript, not in the graphic file. The shape keys should be included in the graphics, not in the legend of the figure. Each shape must be carefully trimmed to minimize the amount of white space surrounding the illustration. Trimming numbers improves accuracy when placing a shape in combination with other elements when the accepted manuscript is ready for publication on our website. For more information on individual formats of shape files, see our detailed instructions. Individual drawing files should not exceed 10MB. When you choose the right format, this file size is sufficient to produce very high quality data. Please note that the author (s) is responsible for obtaining permission from the copyright holder to reproduce numbers (or tables) that have previously been published elsewhere. In order for all figures to be opened, authors must have permission from the copyright holder if they wish to include images that have been published in other journals, not in open access. Permission must be specified in the figure legend, and the original source is included in the reference list. Types of drawing files We accept the following file formats for numbers: EPS (suitable for diagrams and/or images) PDF (suitable for diagrams and/or images) Microsoft Word (suitable for diagrams and/or images, numbers should be one page) PowerPoint (suitable for diagrams and/or images, figures should be one page) TIFF (suitable for images) JPEG (suitable for photographic images, less suitable for graphic images) PNG (suitable for images) BMP (suitable for images) CDX (ChemDraw - suitable for molecular structures)For and offers suitable file formats for specific shape types, please see the size of the picture and the resolution of the Figs are resused when the final full text and PDF versions are published in accordance with the standard sizes of BioMed Central, which are below. Figures on the Internet: 600 pixels (standard), 1200 pixels (high resolution). Figures in the final PDF version: 85 mm wide for half a page 170 mm wide for the full width of the page figure a maximum height of 225 mm for the figure and legend the resolution of the image about 300 dpi (points per inch) to the final size Ofngs must be designed so that all the information, including text, is legible in these measurements. All lines should be wider than 0.25 pt when the standard shape width is limited. All fonts must be built in. Figure file compression vector numbers should be presented as pdf files, usually more compact than EPS files, if possible. TIFF files must be stored using L'W compression, which is unprofitable (reduces file size without reducing quality) to minimize download time. JPEG files must be stored at the highest quality. The conversion of images between file types (especially unprofitable formats such as JPEG) should be kept to a minimum to avoid deterioration in quality. If you have any questions or problems with the numbers, please contact the customer service team info@biomedcentral.com. Back to the Top Fast Dots: Use double line distance Include line and page number use of SI units: Please Make sure that all the special characters used are embedded in the text, otherwise they will be lost during the CONVERSION to PDF Do not use page breaks in manuscriptFileThe following formats of word processor files are acceptable for the main handwritten document: Microsoft word (DOC, DOCX) Rich Text format (RTF) TeX/LaTeX (use of the TeX BioMed Central template) Please note: If your manuscript contains any un edited files (such as PDF files), you will need to re-send the edited file when you submit the revised manuscript or after accepting an editorial if you need to review it. For TeX/LaTeX users, see TeX BioMed Central and BibTeX if you use the TeX format. Send links using a bib or bbl file. When you send TeX materials, please send a TeX file and a bib/bbl file as handwritten files. Please also convert the TeX file to a PDF (please don't use the DIV file) and send this PDF as an additional file called 'Reference PDF'. This PDF will our production team as a guide to verifying the layout of the article as the author intended. The editorial system checks for any errors in Tex files. If an error is present, the PDF system will display the LaTeX code and highlight the highlight explain the error in the section start with an exclamation point (!). All relevant edited source files must be downloaded during the submission process. Failure to submit these original files will cause unnecessary delays in the production process. Style and languageFor editors and reviewers to accurately assess the work presented in yours if you need to provide English-language quality content to be understood. If you need help writing in English you should consider: Visiting an English language tutorial that covers common errors when writing in English. Ask cos, who is a native English speaker, to consider yours for clarity. Use a professional language editing service where editors will improve your English to make sure your meaning is clear and determine what yes require your review. Two of these services are provided by our Branches Nature Research Editing Service and American Journal Experts. BMC authors are entitled to a 10% discount on the first submission to any of these services. To get a 10% discount from English editing from the Nature Research Editing Service, click here. To qualify for 10% from American Journal Experts, click here. Please note that the use of the language editing service is not a requirement for publication in a journal and does not imply or guarantee that an article will be selected for review or accepted. To make it easier to edit and review experts to accurately assess the research presented in your manuscript, you need to ensure that the document is clearly qualityd in English. If you need help writing English, think: Check some textbooks on common language errors in English. Ask your native English-speaking colleagues to review your manuscript for clarity. Using professional language editing services, editors polish English to make sure your meaning is clear and ask questions that require your review. For example, our Nature Research Editing Service and American Journal Experts partner can provide such professional services. BMC authors receive a 10% discount on the first order, which applies to both companies. Just click on the link below to get started. To retouch the 10% offer with the editor of Nature Research Editing Service, click here. Use an American magazine. In the case of manuscripts, they must be written to a level that they can fully understand so that editors and reviewers can accurately assess the results of your manuscript. If you want to ask for help writing, please consider the following: Visit the English textbook page to see the common mistakes you make when writing in English. Find a native English colleague who will clarify the presentation of your manuscript and ask for a review, and in preparation for the review, we use a professional English calibration service that explains the meaning of the manuscript and identifies the issues required by the review and improves the level of English. Nature Research Editing Service and American Journal Experts provide services under our agreements. BMC offers a 10% discount if you use the above two services for your first paper. To request a 10% discount on the Nature Research Editing Service, please click here to request a 10% discount on American Expert Journal. Data and Materials For all BioMed Central journals strongly recommends all datasets that rely on the manuscript's findings, either deposited in public stores (where possible and appropriate) or, if possible, presented in the main article or additional support files in a machine-readable format (e.g., spread sheets, not PDF). Please see a list of recommended repositories in our editorial policy. For some journals, the deposition of data based on the manuscript's findings is an absolute requirement. Please check the Instructions for authors for the relevant journal and the type of article for the magazine specific policies. For all manuscripts, information about the availability of data should be detailed in the Accessibility of Data and Materials section. For more information on the contents of this section, please see the Declaration section in the instructions for the authors of the journal. For more information on BioMed Centrals' data availability policy, please learn about our editorial policies. The format of your manuscript's Accessibility of Data and Materials section is the following format. Accessibility of your manuscript's data and materials should be used: Data set (s) confirming the conclusions of this article, (is) available in the repository name repository, unique permanent identifier and hyperlink to the data set http:// format. The following format is required when the data is included as additional files: Data set (s) support for the findings of this article (included in the article (and its additional file (s)). BioMed Central supports the Force 11 Data Citation Principles and requires that all publicly available datasets be fully listed in the reference list with an affiliation number or unique identifier such as DOI. For databases, this section should mention the web/ftp address where the database is available and any restrictions on its use by non-umenable. For software, this section should include: Project Name: For example, My Bioinformatics Project project homepage project: for example. Archive version: DOI or a unique identifier of archival software or code in the repository (e.g. enodo) Operating System (s): for example, independent platform programming language: for example, Java Other requirements: for example, Java 1.3.1 or above, Tomcat 4.0 or higher License: for example, GNU GPL, FreeBSD, etc. Any restrictions on the use of non-essential: for example, the license required information about available storage for other types of scientific data, including clinical data, can be found in our editorial policy. LinksVide our editorial policies for the author's guide to good citation practice. Please check the recommendations for the relevant journal and article type. What should I mention? Only articles, records of clinical trial registration and abstracts that have been published or are in the press, or are available through public e-print/preprint servers, can be provided. Unpublished abstracts, unpublished data and personal messages should not be included in the reference list, but may be included in the text and be referred to as unpublished observations or personal messages with the names of the researchers involved. The author is responsible for obtaining permission to quote personal messages and unpublished data from the mentioned colleagues. Only footnotes are allowed. The magazine's abbreviations follow the Medicus/MEDLINE index. Any articles in the press quoted in the references and required for evaluation by reviewers should be available at the request of the editorial board. How to format linksP over check the instructions for the authors for the relevant journal and the type of article for examples of the appropriate style of reference. Web links and URLs: All web links and URLs, including links to the authors' own websites, should be listed in the reference number and included in the reference list, not in the text of the manuscript. They should be provided in full, including both the site's name and URL, and the date the site has been accessed, in the following format: Mouse Tumor Biology Database. Access to access on May 20, 2013. If the author or group of authors can clearly clearly related to a web link, for example, for blogs, they should be included in the link. Authors may wish to use link management software to make sure that reference lists are properly formatted. Back to the top When preparing the tables, please follow the formatting instructions below. Tables should be moderated and presented in the text consistently using Arabic numbers (i.e. table 1, table 2, etc.). Tables less than one page long A4 or Letter can be placed in the appropriate place in the manuscript. Tables longer than one page A4 or Letter can be placed at the end of the document text file. Please specify where the table should be displayed in the appropriate location in the text file so that the table can be added to the right place during production. Large datasets or tables that are too wide for a page of landscape A4 or Letter can be downloaded as additional files. For more information, please find out below. Tabular data provided as additional files can be downloaded as an Excel (.xls) spreadsheet or commas of divided values (.csv). Please use standard file extensions. Table names (maximum 15 words) should be included above the table, and legends (maximum 300 words) should be included under the table. Tables should not be embedded in numbers or spreadsheets, but should be formatted using table object in the word processing program. Color and shading cannot be used. Parts of the table can be highlighted with a superscript, residence, inscriptions, symbols, or bold text, the meaning of which should be explained in the legend table. Commas should not be used to indicate numerical values. If you have any questions or table problems, please contact the customer service team info@biomedcentral.com. Back to the beginning Because the length and amount of data is unlimited for many types of articles, authors can provide datasets, tables, movies, or other information as additional files. All additional files will be published along with the accepted article. Do not include files such as patient consent forms, language editing certificates, or revised versions of the main handwritten document with tracked changes. Such files, if requested, should be emailed to the editorial address of the magazine with a link to the manuscript number. Please do not send completed patient consent forms unless requested. Results that would otherwise be listed as data not shown should be included as additional files. Because many web links and rapidly breaking down, BioMed Central requires that the supporting data be included as additional files or deposited in a recognizable repository. Please do not refer to the data on the personal/departmental website. Do not include any individual party details. The maximum file size for additional files is 20MB each, and the files will be scanned by the virus when sent. Everyone The file should be sequenced in the main part of the text. If additional material is provided, please list the following information in a separate section of the manuscript text: File Title (e.g. Additional file 1) File format, including correct file extension, such as .pdf, .xls, .txt, .pptx (including the name and URL of the relevant viewer if the format is unusual) Data Title Description Data Description should be called Extra File 1 and so on and should be straight, for example, The additional file of the film shows this in more detail (see Additional File 1). For more guidance on how to use additional files or recommendations on how to submit certain types of data or information, please learn how to use additional files. Files.
