As the school approaches, both parents and students should be aware of their resources as they prepare for a new class, new year and new learning challenges. Text-to-speech software is often a vital resource for students with dyslexia to help reading, promote understanding and improve overall literacy skills. Here are 10 useful text-to-speech software and applications that are great supporting technology tools to have at the beginning of the school year. To read on a desktop computer or laptop NaturalReader, self-proclaimed as the most powerful reader of text to speech, can turn PDF files, web pages, e-books and even printed materials into spoken word. Available for both Mac and PC, this software can convert and store any text document into an audio file. Audio functions such as speed and voice are regulated, and once the audio file is saved it can be transferred to other devices such as the mobile phone, so that the user has a file where he or she is going. TalkButton, available for Mac and Microsoft Word computers, is a text software that can be controlled through a toolbar at the top of the computer screen. Text that is read aloud can be adjusted to slow down, speed up, pause, or play for a few seconds using the availability toolbar. Audio files created from text software can be stored and downloaded to iTunes. Browsealoud is a web page navigation software available for most versions of Windows that is designed to help those with dyslexia and second language learners browse the Internet. The software removes the web page down to the main text so that the user can only focus on the text. Its text-speech function also comes with a magnifying glass icon that follows the text as it reads aloud. ReadSpeaker is a mac or PC screen reader that lets you read documents, web pages, and e-books aloud. The resource is entirely based on the Internet, so users can access it from any computer connected to the Internet with their login information. Saved documents and images can be accessed on any device, however. ReadSpeaker comes in a variety of packages to meet individual, business, classroom and student needs. To read on a tablet or phone Voice Dream Reader is a text application to support Apple and Android devices, which converts PDF files, web pages, Microsoft Word and other formats of documents into an oral word, and also offers additional features such as bookmarks, notes and a built-in dictionary. KNFB Reader is a text-reading app that works exclusively outside of an image. Although originally designed to help the visually impaired and the blind, the text of this program to speech technology extracts the words found in the image and converts it into speech. Users can take pictures directly from the app or use stored images from their device. KapturaTalk KapturaTalk help from text to speech along with many other reading and writing resources, making it a useful resource for tasks that require both reading, writing, and research. The app's web browser removes ads and redesigns the site format to provide the user with a recited and simple text page. The app also has a dyslexic friendly font that can be turned on or off. You can find this app in AppStore and Google Play Store. Web Reader is a phone and tablet app that offers text-to-speech help for news sites, articles, and PDFs. This app allows you to cut, copy, and paste content and organize it on pages and sync content with programs like Dropbox. The app can navigate news sites, and allows the user to switch and view articles by having one article continuously read aloud to them. Read and write, created by the same company as Browsealoud, is available for Chrome tablets and browsers. This app has both text to speech and talk as I type ability. Its alternative keyboard and features help users read and write shared tablet tasks such as email, typing and reading. Clarospeak, a text app for iPhone and Chrome browsers, offers a variety of text and format options. The user can copy and paste imported documents and web pages into Clarospeak for reading, and can also perform the opposite - write something in Clarospeak so that he read back to check the errors and then export to files or an open browser. Read the current article aloud on the web page with one click. Supports 40 languages. Tired of sitting, tired of reading? Click, jump on the bed, and read the article aloud to you. You can choose from the many male and female voices available. You can also set the height of the voice and the speed of reading. Supports PDF. Supports EPUB (through an excellent EPUBReader extension from epubread.com). Starting with 1.4.6, you can use your Amazon Web Services (AWS) or Google Cloud Platform (GCP) account to include Amazon Polly and Google Wavenet voices. Read Aloud is an extension of Chrome and Firefox that uses text-to-speech technology to convert web text into audio. He works on a variety of websites, including news sites, blogs, fan fiction, publications, textbooks, school and classroom websites, online universities and educational materials. Read Aloud is designed for users who prefer to listen to content rather than read, people with dyslexia or other learning disabilities, children who learn to read, or simply provide users with an alternative way of consuming web content. Read Aloud allows you to choose from a variety of text votes, including those provided in the native language by the browser, as well as cloud service providers from text to speech, such as Google Wavenet, Amazon Polly, IBM Watson and Microsoft. Some cloud-based voices may require additional in-app purchases for recent developments in machine learning and artificial intelligence have made it possible to synthesize speech very efficiently. Google Wavenet, Amazon Polly voices, for example, use bleeding edge technology to provide life-like synthetic speech that is close to human speech. Read Aloud allows you to use Google's own cloud platform and Amazon Web Services account to include those voices. To use Read Aloud, just go to the web page you want to read and then tap the Read Aloud icon on the Chrome menu. In addition, ALT-P, ALT-O, ALT-Comma and ALT-Period keys can be used to play/pause, stop, fast and fast, respectively. You can choose the text you want to read before activating the extension. Right clicking on the chosen text will give you another context-menu option to activate Read Aloud. To change your voice, read speed, step, or turn on the selection of text, go to the Options page either right by clicking on the Read Aloud icon and selecting options, or by clicking the Gear button on the pop-up extension (you'll need to stop playing to see the Gear button). Read Aloud is an open source project that I created in my spare time to meet my own needs. I'm surprised that it has become quite popular and glad that it was useful for many people. If you would like to contribute bug fixes or translations, please visit the GitHub page (. If you see bugs or have suggestions to make the extension better, please feel free to provide feedback through the report question link inside the application. Need help finding the most effective speech software text that will make your eLearning course an unforgettable experience? Text to speech software has become an integral part of modern e-learning courses. Text to Speech software answers a significant number of learning questions, including learning difficulties and literacy skills.
