Gender roles in the 1930s america

Adam B. Vary: Here we are, Jaimie, two people who have seen - and had quite different reactions - to *Gone Girl*. In our first meeting about the film, in fact, one of us may have been moved to speak at a fairly high volume about the other's opinion of the film. Which I find quite exciting - it is all too rare for a film to evoke such a raw feeling! Director David Fincher and writer Gillian Flynn have invented *Gone Girl* to do it from the first shot. (I must confess that Flynn and I both worked at *Entertainment Weekly* at the same time for a few years, and we were kind to each other, although I haven't seen or spoken to him since his book tour for his second novel *Dark Places*.) When Nick Dunne (Ben Affleck) looks down at the blond head of his wife Amy (Rosamund Pike), who rests on his chest and wonders aloud what it would be like to break his skull to find out what he's thinking, it's instantly terrifying and, in my opinion, terrifyingly honest feeling. I think most people in a relationship have had similar (if tamer) thoughts that appear on their heads in the heat of the moment about their loved one. Where these ideas lead Nick and Amy — and what their behavior reveals about how we feel about men and women and how they relate to each other, privately and in our culture — is how Fincher and Flynn, in my opinion, meant such a heated debate among colleagues, for example, who are otherwise good friends. Jaimie Etkin: Well, seeing *Gone Girl* has made me angrier than any movie seen in recent history, I think they managed that in that regard. I think the most important dialogue that the film inspires is something you referred to when you said that it looks at how we feel about men and women and how they relate to each other. Nick's violent prose about removing Amy's brain is perhaps the most violent thing he says throughout the movie (though not the most violent thing he does), and behind it seems to be that he can't understand his wife on *Men Are From Mars, Women Are From Venus* sort of. This sound sets the tone for me that Nick's motivation is pure, although his external appearance (smashing glasses in front of detectives, smiling in front of his missing wife's poster for the media, etc.) says otherwise - it says he's the one trying and Amy with her bitterly cold glare is a frosty who won't let her in. Besides, after that scene, the camera that had shown glare through Nick's eyes moved away from a first-person perspective to the omniscient, non-loud one that showed me the filmmaker's bias on Nick's side of the story. We'll never see the story again. - and instead it seemed to me that. That. We'll see Nick from then on, but this is really a happened version of the story. California Governor Jerry Brown recently signed Senate Bill Number 826, which requires all male corporations to have at least one woman to address gender equality in 165 public companies statewide. The legislation has drawn criticism and praise from both sides to strike because such a drastic measure has finally raised awareness of an issue that has limited the professional installation of women in Suite C.Regardless of which side of the debate you can lean on, not where in California the lack of women on corporate boards has affected more than Silicon Valley. By default, Senate Bill 826 is aimed directly at the tech industry, which has been particularly criticized for lacking diverse perspectives. More importantly, I had the courage to ask: should the inclusion of gender equality be in any legislative programme, or is it just a private company issue? Did California do it right? To gain more perspective on this issue, I spoke to Tiffany Apczynski, vice president of public policy and social impact at Zendeski, headquartered in San Francisco, to discuss how women in Silicon Valley reacted to the legislation. Here are five key takeaways from our debate. Tiffany noted that SB 826 is one small step in dismantling [bias] cycles throughout the male business world. In addition, it helps to change the landscape and bring more voices to the table, bringing equity to all aspects of the business model. While the bill is a corrective measure that provides tight timelines for state public companies, the bill provides extensive data and research to support the value women bring to corporate boards of directors and the country's future prospects. The two biggest debates by far are parental leave and childcare, which have put women on a high-level career with limited options. Given that women are primary providers of childcare and because maternity leave does not have a federal protection policy, it is difficult to present such a debate to all male-business boards. Apczynski added: Fewer people leave the workforce if you have a better parental leave policy and childcare subsidies. At the corporate level, we can have these discussions and implement the team's best policy. There are diversity and inclusion experts who believe that implicit biases are based on access in peer groups. The members of the Board of Directors depend on the recommendation and advice of other members of the Board of Directors to assist in filling vacancies. Tiffany says technology can't be innovative or disruptive if policymakers don't different experiences and people. He believes the legislation will open up a worldview for members of corporate boards so they can start looking at members with a seat at the table. Apczynski shared that Zendeski has no problem with corporate culture. It is probably due to their commitment to gender equality, whose government consists of 50% women and goes beyond the requirements of SB 826. Tiffany also said: We are not afraid to go against the status quo. In addition, Zendesk has witnessed an improvement in corporate morale due to their social impact policy, creating opportunities for their team to volunteer as an organization and gain first-hand knowledge of how different perspectives affect the social landscape of the community. Perhaps California will take a page on promoting Equal Pay in Britain by regulating transparency. The UK's position on public shaming of businesses for their unfair pay policy with an annual report that must expose their gender pay gap is a push towards wage equality and the first major corrective measure on gender equality. The performances have made for uncomfortable reading for company executives, in a recent commentary in the *New York Times*. California's legislation can cause the same level of embarrassment. Under the legislation, a quarter of California public companies in the Russell 3000 index have no women on their board... In addition, companies with more women on their board are more likely [to have] strong governance structures, show high levels of transparency and avoid widespread controversy, as cited in the *Women Create a Sustainable Future* study by the UC Berkeley Haas School of Business 2012. Tiffany added that transparency gives women hope that there are opportunities for advancement within the organization, which improves retention and provides women with advocacy and support for professional promotion. Did California do it right? According to the act, all state enterprises must have female support by the end of the calendar year 2019. At the moment, it is a significant head start in this ongoing debate. Peter Arditto In these children's books, sensitive boys express themselves as they please – there are no monsters, superheroes or gender role stereotypes in sight. Credit: Peter Arditto Julián loves mermaids. So when she sees women on the train covered in dreamlike dresses with fishtail legs, she can't wait to get home and mimic them - the curtain becomes her tail, the flower stems turn into an entangled headpiece and lipstick completes the look. And suddenly Julián is a mermaid. But then his abuela will catch up with him. Is he angry? Nope! She knows what place to take her: mermaid parade! Over 4 years old Ad ends Credit: Peter Arditto Did you know bill gates was once told no one wanted a home computer? Or that Steven Spielberg was bullied. because of his religion? Or that Daniel Radcliffe, star of the Harry Potter films, has Is that why it's hard for him to tie his shoes? Each of the 75 people in *Stories for Boys Who Dare to Be Different* was once considered strange by others, but grew to achieve great, amazing things. Age 9+ Credit: Peter Arditto Riley believes in Whispers, magical wish-granting fairies in a deep Carolina forest that he believes will bring his missing mother back. But he is also concerned that his condition - the fact that he prefers to kiss boys rather than girls - is the reason why he is gone. When he bravely chases winged creatures, he finds more than just the truth. We predict that this emotional story will win the prize. Over 10-year-old Advertising Credit: Peter Arditto Almost every morning Jack and Alex meet in the sandbox of the park. Jack likes trucks and sirens and wants to wreck things. Alex is like dolls and color pink and sparkly dresses. And just when you think Alex is answering no to Jack's question *Want to Play Trucks?*, he suggests the best game ever: dolls driving trucks! (Ah, toddler ingenuity.) Age 3+, \$16 Credit: Priscilla Gragg Jump into content Lessons on highlighting boys who are open, friendly and are meant to defy the stereotypes of macho men. Lupe Aguilera encourages her 3-year-old son Nico to love dolls, play kitchens and everything pink. By allowing her to pursue various interests, the Mexican-American mother hopes to counteract the machismo attitude that has long taken root in Latin culture, which dictates that men should be rugged creatures immune to showing emotions. Boys don't cry, there was a common saying in my house. My brother was told to be tough when he got mad. And because he was more sensitive, my uncle and cousin teased him a lot, Aguilera says. Her husband also comes from a traditional Mexican family, and has a similar experience. That's why the duo make sure their San Francisco home doesn't have gender stereotypes, so Nico sees it as a place where tears are a good thing and interest isn't forbidden. Nature only goes so far, says Jennifer Coloma, Ph.D., a Peruvian psychologist at the Children's Health Council in Palo Alto, California. Boys and girls may have certain differences in how they express their feelings, but what they learn at home in their years of development has a greater impact. Even babies pick up behavior and discriminate against what a woman does and what a man does to understand the world. By showing them different ways of doing things and paying attention to what makes them more confident, we can empower them throughout their lives. Isn't that the ultimate goal? Breaking old-school stereotypes isn't easy, but there are ways to try when we help our boys succeed. When things Go your son's way on the playground, get mad or shut down? According to a 2015 *Promundo* report, a nonprofit that promotes In Washington, D.C., men who were raised to hide their feelings reported higher rates of depression, suicide and substance abuse. But giving your child tools to identify emotions can help, Dr. Coloma says. At Pre-K, they work on happy, sad and hopefully learn that there are many kinds of emotions. But knowing the range of each emotion can resonate internally much more. Even a small child can understand that frustration is not the same as crazy, Dr. Coloma says. The trick is to pay attention to the moments when your child feels a certain way and mark it in a way that he understands. Sometimes I use a ruler and ask, 'Are you really angry or are you here?' If you're up here, how are we going to get you down?' As the boy gets older, the pressure to avoid showing weakness can hamper academic success. I had a postgraduate o surface professor who said, 'A boy would rather look tough than stupid,' and it stayed with me, recalls Eva Rivera, a Mexican-American social worker who works with preschoolers in Los Angeles. When boys get to junior high, none of them will say anything if they don't understand the concepts. In high school, Latino boys have the highest dropout rate of any ethnicity, and their dropout rate is nearly double that of Latinos, according to a new study from the Institute of Educational Sciences. Getting children to open up requires support from both teachers and parents. We need to check with the kids how they feel when they come into the classroom and when they get home, Rivera says. Help them develop trust. They want to know, 'Will you be all right if I show you this feeling, or are you making fun of me?' As a parent, you don't get it right every time, but when you don't, you have to recover from it. You can say, I made a mistake. I'm sorry I hurt your feelings. How can we cure it? The message they get is that you're not afraid to be vulnerable. It is often seen as a weakness when in reality it takes strength to feel a certain way and express it, says Dr Coloma. Most of the children I work with are Hispanic, and often they see how their father reacts to something negative, and their behavior can be offensive and deversy. Ask yourself: Are my partner and I behaving, how do we want them to behave? The key is to teach them to redefine what strength means by their own actions. RELATED: Encouraging your child's class participation When a child lets their protection go, they can forging friendships with other children. Boys who can't reveal their true selves to their peers feel lonely and depressed, says Natasha J. Cabrera, Ph.D., Professor of Human Development at the University of Maryland Park, which focuses on the social social media of Latino children If he can't tell someone he's sad, the other can't help them. As a result, they have difficulty establishing relationships with friends, then partners and later husbands. To create those bonds, he needs to learn empathy, the ability to step into someone else's shoes. Start by teaching him to read body language, Dr. Coloma suggests. If you see a child in the park with his head hanging low, ask your son: 'How do you think he feels?' He's fallen and his head's down. Why are we sad? Remember when you were sad? What made you feel better? Go further by encouraging your child to play with a lonely child. Supporting other people is a lot of motivation, Dr. Coloma says. Children can also learn compassion through a furry friend. In fact, studies show that children with pets have higher emotional intelligence. They need to be gentle and learn to iron it, Dr. Coloma says. And children must be tuned to unspoken cues according to the needs of the animal. Although Aguilera didn't get Nico a puppy, he bought her a doll when he was 18 months old. Soon after, she started rocking her baby to sleep, she says. I think it's helped him understand how to be caring. He's still very cariñoso. In addition to diversifying her toy box, you should be open to your child's many interests, although some of them are typically girl chases. If a boy tries on high heels, it's because he's seen his mother do it, and he wants to know how it feels, Rivera says. Dr. Coloma suggests having fun with it instead of dictating who he should be. If you think putting on tacons can lead to something else, relax. Different interests do not determine a child's sexual orientation, Dr. Coloma says. If you close something, it promotes fear. He gets messages from everywhere. she does not need to be ashamed at home for something that is natural and healthy to study. Mothers of older children raised free of gender stereotypes can prove how encouraging experimenting with boys can help build well rounding. I had 110 percent machismos in my household, and I swore I would never raise my children that way, says Cuban-Puerto Rican mother Elisa Batista of Berkeley, California, whose 13-year-old son Ari plays competitive football and enjoys sci-fi performances – and is also classically trained on piano and likes to act. On his last report card, his teacher said: 'He helps his classmates with their troubles, using his positive attitude, Batista says. He's a generous friend and very considerate of the world. Just because you (and hopefully your partner) see past the blue is for the boys, has a girls mentality, don't surprised if older relatives are not so open-minded. Our families go to the trouble, but I see how it challenges their way of thinking, says Aguilera. We practice potty Nico, and when my mother asked him what kind of underwear he wanted, he asked for flowers. My mom hesitated and finally said, Okay, if that's what you want, but I know she can't have them and says she couldn't find them. If this sounds familiar, talk to your family about a generational change, Dr. Coloma suggests. Ask an older relative to remember the time when he or she had differences of opinion with his parents due to an outdated traditional mentality and inquire about how it was handled. Before you lecture your parents, who may find it harder to change, look what you and your partner are doing: Are you guilty of gender bias, too? It happened to Donna Duarte Ladd from New York. When I was a kid, my mother was always in the kitchen and the last one to sit at the table. And even though I promised to be different, the same thing will happen to me, says Duarte Ladd. If you want your child not to have strict gender roles, you need to show flexibility in your own relationship, Dr. Coloma says. Maybe some nights dad makes dinner. If it's too hard to change, acknowledge why and explain it to the kids. I'm doing this because your father's been working all day and I agreed to cook. Instead of stiffness this is what you should do, make it clear that it was a choice. In addition to this, you can point to stereotypes whenever they appear in the media. It's another way to correct assumptions about what's okay for boys versus girls. For Batista, this is an ongoing conversation. Recently, we talked about how Princess Tiana was portrayed in the princess and the frog – we loved that she owned her own restaurant and that her prince worked for her! says Batista, who makes sure his son knows that machismo is a thing of the past - at least in his household. We present it in a fun way, like something very charming and old-fashioned, something about our parents' time. Of course, he is fully aware that his son will eventually go into the world and realize that this attitude is still widespread even outside our culture, but so far he is doing his best to open his eyes to possibilities. © copyright .
