Unlike Kali Linux, it also has anonymity, cryptography and development tools with looted cool features. Here we look at some of the well-known Parrot Security OS tools that make it the preferred distribution among others. TOR (The Onion Routers) Tor (The Onion Routers) is a distributed network that is used for anonymity and confidentiality and is used by activists, hacktivists, ethical hackers, Black Hat hackers and others who want to hide their activities online. It is designed in such a way that the IP address of the client, using TOR, is hidden from the server that the client visits, and the data and other details are hidden from the customer's Internet Service Provider (ISP). The TOR network uses hops to encrypt data between the client and the server, which is why it provides better anonymity than a VPN. The TOR network and TOR browser are pre-installed and configured in Parrot OS. OnionShare Onion Share is an open source utility that is used for secure file sharing TOR network size and it's so safe and so easy to use, just drag the file and throw it on OnionShare. It will then generate a long random URL that can be used by the recipient to download the file through the TOR network using the TOR browser. AnonSurf Anonsurf is a utility that makes the entire operating communication system to go through TOR, I2P or other anonymous networks. You don't need an extra browser or anything for it. This doesn't just make your browser communication secure, but it also anonymizes your P2P communications and many other communication protocols. You can start or restart the anonsurf service from the Parrot Sec menu, for CLI options \$ anonsurf start to stop the reboot change status start - Start the system of the entire TOR tunnel stop - Stop the anonsurf and go back to the Clearnet reboot - Combines stop and start changeid options - Reboot TOR change personality - Change Mac address status - Check if AnonSurf works properly myip - Check your IP and check your IP address like no one's looking. Encrypt like everyone else. I2P I2P is another anonymous network such as TOR, but it works a little differently. It provides good anonymity and privacy on the Internet, and can also be used to access Darknet services. Teams: Start the console in the current console. start in the background as a daemon process. stop if it works like a daemon or in another console. graceful stop gracefully, can take up to 11 minutes. Reboot the stop when you start and then start. condrestart Reboot only if it's already up and running. Current State Request status. Set to start automatically when the system boots. Remove Delete. Dump Request dump Java-flow when running. Electrum Bitcoin Wallet Electrum Bitcoin Wallet is a wallet to save and transfer your Bitcoin currency securely. It can sign transactions offline and then these transactions can be streamed online from another computer. It has distributed servers to keep your transactions anonymous. Kayak - Car Hacking Tool Parrot Safety OS has a whole menu dedicated to automotive pentesting tools, kayak is one of these amazing tools. It's a Java-based GUI tool for CAN traffic analysis. It has some interesting modern features such as GPS tracking, recording and playback capabilities. EtherApe EtherApe is a GTK GUI based on an open source network sniffer and network analyzer. It displays an IP layer, a link layer, and a protocol layer, and uses different colors to differentiate protocols. GPA - GNU Privacy Assistant GPA is a gui encryption software that uses OpenPGP, encryption protocol and decryption of files, documents and emails. He used to generate key pairs, store them export public keys. Ricochet is an anonymous and secure chat based on the TOR network. Instead of usernames, it provides you with a long random line that looks like something like a ricochet: qs7ch34js24ogdf which is the user's address. Messages sent with Ricochet end in encrypted and completely anonymous. Nmap Nmap (Network Mapper) is the most flexible and comprehensive tool used for port scanning and network security audits. It's available in Parrot Security OS with a command line and a gui interface called zenmap. Example use, \$nmap-help \$nmap hackme.org Starting Nmap 7.70 () in 2019-02-15 09:32 EST Nmap Scan Report for hackme.org (217.78.1.155) Host up (0.34s delay). rDNS Entry for 217.78.1.155: cpanel55.fastsecurehost.com Not shown: 963 filtered ports PORT STATE SERVICE 21/tcp open ftp 22/tcp closed ssh 25/tcp open smtp 53/tcp open domain 80/tcp open open pop3 143/tcp open icp open Snpip... Nikto Nikto is a powerful, free and open source scanner that is used to identify common security loopholes in web servers. It scans the Web Server version to check for problems with versions. It also scans Web Server configurations such as permitted HTTP methods, directories, and default files. Examples of use are \$nikto-h www.vulnerable server.com - To scan \$nikto -H - To reference the menu \$LMap \$LMap is a powerful but free penetration testing tool that is used to analyze vulnerabilities related to databases. It can automatically detect and exploit database vulnerabilities, as well as extract or manipulate data from different types of databases. It automates the entire database testing process and can only collect user information, passwords, and other data from databases. \$sqlmap -u --dbs - Using example \$ sqlmap --help Use: python sqlmap (options) Options: -h, --Help Show Basic Aid Messages and Exit -h Show Advanced Help Messages and Exit-Version Show Version Number and Exit.V VERBOSE Verbosity Level: 0-6 (default 1) Target: At least one of these options should be provided to determine the purpose (s) -u URL -URL-target URL (e.g. -g GOOGLEDORK Process do. Crunch Crunch is the creator of dictionaries for password attacks. It can generate word lists according to your specifications, and it will generate a dictionary with all permutations and combinations of letters, numbers and special characters. \$crunch-help tee help.html crunch version 3.6 Crunch can create a list of words on criteria that you specify. A way out of a crisis can be sent to a screen, file or other program. Use: crunch , where the mines and max are, where you'll have a max and a max. ... Snpip... CUPP Custom User Password Profiler (CUPP) is an advanced dictioner generator for custom password profiling. This is better than crunching in many ways because it will prompt for some user data such as username, birthdays, pet names, and it will generate a list of words automatically based on these specifications, so you don't have to remember long syntaxes. Options - h you look at him child! ☺ For more help take a look at the documents / README Global configuration file cupp.cfg parrot os tools tutorial pdf. parrot os tools tutorial pdf download
