You have to accept it from the beginning. Medicine is very broad and is not an exact science. When you know the answer for sure, tick it off. In this case, getting it right is easy. But when you doubt when your knowledge is not enough, you have to fight for success. Never give up a question because you don't know it. Sometimes, if its structure, the way it is expressed and some other details, we can exclude some options. In extreme cases, we might even get a question that we know nothing about. In this section, we will examine a number of resources that, when we do not know enough medical theory, can help us find the right solution. Each of these procedures, considered separately, can be considered as a tactic. As you'll see throughout Section I, there are several model questions. To solve them, some procedures are more effective than others. All of this is part of the field of tactics. By studying this part of the book, you should pay close attention to the examples we give. In the MIR exam, there are question models that are repeated continuously. You just have to learn to identify them and everything will be easier. ansehenSeitentransparenzFacebook liefert Informationen, mit denen du die Intention von Seten beser verstehst.
