Call recording apps have a bunch of legitimate uses. Some people like to keep phone calls recorded for legal and security reasons. However, the practice borders on illegal in many areas. We recommend you to be discourage ofa person before using one of these apps. Call recording apps have a lot of problems. Android support is sketchy at best, and it's actually quite difficult to record calls on new versions of Android. There are several ways around it. Many call registrars record a loudspeaker similar to the app's voice recorder, but it requires you to make all your calls on a loud phone. Others have different ways, but require complex settings and an insane number of permissions. Google has made it very difficult to do this job. Some of them may work in Android 8.0 before, and some may work in Android 9 and 10. It's honestly impossible to say for sure on every device. Those that run on Android 10 have complex installation instructions and even then, this is not guaranteed. So we don't guarantee anything here. We've got it all run at least once by at least one phone tester and on at least one version of Android.Here are the best call recorder apps for Android! We regret that we can't be more specific, but Google really doesn't want people to record phone calls right now. If otherwise not stated, let's assume that the apps below are only available for Android 8.1 and under. Automatic Call RecorderPrice: Free/\$6.99 Automatmatic Call Recorder from Appligato is one of the most popular call recorder apps for Android. It has been hit hard by the call log change in Google Play policy, but it's still a functional call registrar. The app has Google Drive and Dropbox integration along with some other neat little features to help things out. The pro version is expensive, but adds a few extra features as well. It works well aside from the log calling thing. Automatic Call Recorder using Recorder and Smart AppPrice: Free/\$5.49It app is very similar to the other automatic Call Recorder apps on this list, just less popular. It comes with a lot of good features, including automatic call recording, some organization functions, the ability to record in several different audio codecs, and more. It also backs up over cloud storage and a few other small features as well. It's about as good as another with the same name, so you can go with any of them. Blackbox Call RecorderPrice: Free trial / \$0.99 per monthBlackbox bills itself as a professional call recorder It has a regular feature set, including call recording, cloud backup support, and recording quality settings. However, this one takes it one step further with a lock feature for security, Bluetooth support accessories, and dual SIM support. It has one of the longer feature lists and cleaner interfaces of any call recording app on the list. A monthly subscription can come away, but at least it's not very expensive. Boldbeast Call RecorderPrice: Free/\$9.99Boldbeast Call Recorder is one of those apps that either works perfectly for you or it doesn't work at all. You can check Google Play ratings if you don't believe us. Either way, the call recorder app is actually very well done. You can set it up to manually record calls with hotkey if you need to. It also functions as a voice recorder in case you need to do so. The app boasts support for all phones from Android 8.1 to Android 5.0. It works on Android 9.0 with Root and Android 10 if you don't mind using some potentially intrusive workarounds. You can find the Android 10 method here. Call Recorder AutomaticPrice: Free / \$4.99Call Recorder Automatic is a worthy app for recording phone calls. It works well, but you have to keep your phone on the speaker to record both sides of the conversation. The app is simple and easy to use. It records calls and then you can organize them, share them, or save them as you want. Most of the negative reviews from people dissatisfied with the call magazine problem and some additional limitations, starting with Android Pie. He did a great job in our testing. Cube Call RecorderPrice: Free/\$1.99 for 3 monthsCube Call Recorder is one of the few call recording apps on this list with an actual name. We appreciate that. This app works not only with regular phone calls, but also with VoIP services such as Skype, Viber, WhatsApp, Slack, Telegram and others. It has most useful features, including organizational functions, playback functions, and recording quality functions. You can even exclude contacts from the automatic call recording. This one seems to work on Android 10, but requires just as sophisticated customization as the Boldbeast Call Recorder. You can find a reddit thread full of people who actually got this to work here. Otter Voice NotesPrice: Free/\$4.99 per month From Voice Notes is a transcription service and voice note organizer. You can listen to and organize your notes, transcribe existing voice notes and more. It doesn't actually record calls like these other call recording apps. However, you can import records from some of these apps into this one for additional organization. You get 600 minutes of transcription service per month for free. After that, there is a subscription. So if you get a good recording from another app, you can get it transcribed with that, so you have both audio and written recordings at your disposal. Smart Recorder from SmartMobPrice: Free/\$1.49Smart Recorder is Voice recorder. It wasn't designed to record a call, but it can do so as a last resort. Most of its features are for recording a call, including an interesting feature that misses silence, so you don't have to listen to it. It's a good all-around voice recorder and the function of recording a call superficially. You may need to Free this app from saving battery to make it work for longer records. It's also free if you use Google Play Pass.Smart Voice RecorderPrice: FreeSmart Voice Recorder is another voice recording app with some call recording features. It's a free app with ads, so there are no paywalls for features. It can switch between a regular record and a call record if necessary. You can also record in a variety of audio codecs and share it with cloud storage if necessary. It works well for a free app and it's not bad as long as you can handle advertising. The voice recorder from Splend AppsPrice: Free/\$1.99Voice Recorder by Splend Apps is another voice recorder with call recording function. Most of its functions are for recording voices, so record calling things is a bit light. Some features include bitrate settings, background recording, and, of course, call recording. It's a cheap and efficient voice recorder and not a bad way to go if you want to kill two birds with one stone. This one is also available on Google Play Pass if you use it. Bonus: Google VoicePrice: Free / VariesGoogle Voice is a kind of diamond in the rough. It has the ability to record phone calls. In fact, Google support has a tutorial on it right here. There are some caveats with this, however. First of all, you can only record incoming calls. This is an unfortunate restriction, but you can bypass it. It also requires setting up a number with Google Voice and integrating it as an intermediary for your normal number or as a completely separate entity. It's even harder than some other solutions, but it's a solution nonetheless. If we missed any great record-calling apps for Android, tell us about them in the comments! You can also click here to check out our latest Android app and game lists! Google has made automatic backup Android free for people without Google One plans. The iOS app now backs up media, contacts and calendars on iPhones and iPads.The Google One app includes a storage manager, too. Google is about to give a lot more Android users a better security network - and iOS users, too. The Internet giant makes automatic backups available for free to Android users, regardless of whether they have a Google One membership. Important data such as contacts, photos and media reports should always be available if something goes wrong. The feature will be available wherever Google One is an option. Now you have more options if you prefer an iPhone or iPad, too. The upcoming iOS app will allow you to store media and calendars from Google, including through free 15GB of memory. This will ultimately consolidate the features available through individual apps such as Google Photos, but is useful if you want extra protection for what Apple iCloud offers. Regardless of the platform, you'll find it easier Control the available backup space. Google One gets a new storage manager in its app and website that will both illustrate how you use the space and give you ways to make room by removing large files, spam messages and other items that you don't need. Naturally, Google hopes to upsell people to more expensive plans. Read more: The best Android backup apps will reach Google Play in the coming days, while the iOS app will be ready soon. These tools are for everyday consumers, Google said, and won't come to the business users of the G Suite. Android supplement is, to some extent, a way to combat iCloud. While you've long had ways to recover your information on Android, greater access to automated centralized backups provides a confidence similar to iCloud - most of your most important data should be secure if something goes wrong. At the same time, there is no doubt that this helps Google sell one. The more likely you are to back up data in Google's cloud, the more likely you are to need additional storage. There may or may not come a time in your life when you need to record a phone call. While we won't get into specific reasons why you can do this, we'll put it this way: it's super easy. Let's do it. While there are many ways to record a phone call, we'll focus on two different methods: Google Voice and an app called Call Recorder - ACR. Is recording calls legal? Before we get into how, let's talk about potential legal issues that may arise here. I know, I know, this is something you don't want to hear, but it's important, and we need to do our due diligence to make sure you know what happened too. First of all, recording phone calls is not legal in all countries, so you will need to check the rules in your area. To get a little more granular, it can also vary depending on your particular condition in the US-some require that both parties know that they are being recorded, while the other require only that one party knows what is going on. The latter may get a little gray, but if you live in one of these states and you know that the call is being recorded, it's probably safe. It is always illegal for public phones to be recorded without consent, however. For more information on this, you can check out Wikipedia as well as the Digital Media Law Project. How to record phone calls with Google Voice If you're a Google Voice user, it's super easy. If not, you can set up a Google Voice account and become a Google Voice user. Then this method will be super easy for you too! Cheers. Before you can record a call, you must first turn on the call recording feature. You can do this on both the online and Android app, and the steps are essentially the same anyway. I use the internet here, but I'll point out if something is something On an Android app. First, ignite Google Voice and open the settings menu by gliding into the menu on the left side and selecting Settings. Click on the Calls button on the Internet. In the Android app, just scroll down until you see the Challenge section. The latest option on the internet is inbox call options where you can turn on the function to record calls or start a conference call. Use a slider to turn this on. In the Android App, you have to click on the Advanced Call Settings and then turn on the incoming call settings. It's also worth noting that this feature is synchronized between devices, so you only have to do it in one place or another - once turned on, it will work anywhere. However, this will only work if the person calls you, you can't record the call when you're the one who initiated it, which to be honest is just weird. Either way, the next time you need to record a phone call, just tap 4 on the keyboard during the call. The audio hint will let both users know that the call is being recorded. To stop the recording, just click 4 again - another query will shove the record off. The audio file will then be stored in the Google Voice account. A buoy. How to record phone calls with ACR Although using Google Voice is simple and simple, it also lacks some of the features many users want to automatically record calls once they have started. That's where ACR comes into play: not only does it have more features, but it doesn't notify both users they're recording, either. So if you want to secretly record a call, this is the tool you want. There are two versions of this app: free and premium. The latter removes all ads from the app, and adds a few useful features such as the ability to record contact, start recording in the middle of a conversation, save entries in Dropbox or Google Drive, and more. As always, however, I recommend trying the free version initially to make sure it fits your needs. With that said, let's get started. Once you drive ACR, you'll have to accept its terms and conditions - quite a long list compared to most applications, but rightly so. Once you accept the terms of the application, you must give it all the access you need to store. Nothing out of the ordinary out there for an app like this, so go ahead and let it all over the place. From there, the app will push the notification into the shadow showing that it is on. As soon as you make or receive a phone call, it will start recording. You literally don't

have to do anything - it records all the calls by default. If it's not your style, however, you can change that if you have a premium app. app, and then slide open the menu on the left. Select Settings and then Record. There are many options in the menu, but scrolling until you see Start the record and change it to the manual. Done. There are many more features under the hood of the ACR, so I definitely recommend digging into it if you want to do more than just record conversations. Again, keep in mind that you'll have to pay for more advanced functionality, but I think it's easily worth the \$3 asking price if that's something you'll use often. Also, it's really well designed, which can be hard to find in a chock store full of dozens of apps that make similar versions the same thing. Thing.
