As the name implies, this module addresses the basic principles of taxation. This is a very important place for licensed accountants, as many areas of activity contain consideration of tax issues. It also provides a framework for extended taxation (ATX - UK) to be chosen by those working in the tax environment. Members of the Tax Research Group (TX - UK) have written several technical articles, including two on inheritance tax, two on income, one on group, two on VAT, one on benefits, one for cars, one for profit adjustment and one on finance (No. 2) Act 2017 and the Finance Act 2018. All of these articles are available on the ACCA website. Make sure you read them to get a further idea of what the taxation (TX - UK) is looking for. They can also be useful for F6: You have become familiar with the rationale - and function - of the tax system. The curriculum then considers individual taxes, which the accountant would like to have a clear understanding, such as income tax on self-employment, employment and investment, (employer) Corporation tax liabilities of individual companies and companies companies, the country's broad plan of insurance contributions liabilities of both employed and self-employed persons, the added value of tax liabilities of businesses, the taxable profits arising from the removal of investments by each person and company, and the obligation to tax inheritance, arising on the tax of inheritance, arising on the tax of life-bearing transfers. You will be predicted to have some knowledge about these taxes; however, no previous understanding was expected. You need to learn about the basics carefully and analyze the experienced pro-forma calculations. Then it will just complete them by slotting in the numbers from your specific work. In addition to being able to calculate tax liabilities, you may be required to give an explanation based on calculations, follow tax planning strategies for people and groups, and learn about compliance issues for each primary tax through different businesses and personal scenarios and situations. Be able to integrate knowledge and perception from the entire curriculum to allow you to generally certain calculations of tax liabilities. Be able to explain the basic concepts of taxation by ensuring easy precis rules and how they apply to a particular situation. Be able to practice/apply tax planning strategies by identifying achievable options and testing them to see what has a greater impact on tax liabilities. All questions are mandatory, so you should review the full curriculum. Because the exam includes 15 objective test questions in the And 15 objective test questions in section B, you'd expect the questions to cover most of the Curriculum. Selective review will limit the variety of questions you can answer and then reduce your chances of passing. This is above to go into the exam understanding a reasonable amount about most training programs rather than focus on a few subjects except the rest. Practice as many exam style questions as possible will be the key to passing this exam. You should do questions on term terms and make sure you write the full answers to the discussion parts as well as do the calculations. Also, make sure you aim for all three mock tests in exam conditions. You will need to quickly identify the requirements for objective test questions so that you can make your answers confidently during the available time. When building the answering questions you will have to carry out calculations, with a clear work and logical structure. If your numbers are not perfect you will not necessarily lose too many marks as long as your method is correct and you have stated any assumptions that you have made. You will also need to apply your tax knowledge to the facts of each particular issue, as well as identify compliance issues for your client. You may also be required to describe the rules and conditions, so take care to practice the descriptive elements of the answers. There is no choice in this exam, all questions need to be answered. Therefore, it is necessary to study the entire curriculum, there are no shortcuts. The ability to answer objective test questions and cases improves with practice. Try to get as much practice with these questions as you can. The built answers will be based on simple scenarios, and the answers should be focused and specific to the question requirement. Answer all parts of the built answers to the questions. Even if you can't calculate all the elements of the calculation, you can still get marks in the descriptive parts. Light grades in this exam usually fall into three categories. There are no preferences in this exam, all questions need to be answered. You should therefore learn about the full curriculum, there are no shortcuts. The first part of the exam consists of 15 questions with multiple selection, costing two marks each. Inevitably, they will cover huge changes in the curriculum. The second section of the exam consists of three situations each being tested with 5 multiple selection questions, really worth two grades each. You have to do a positive you recognize the script before you try the relevant questions. The practice of longer questions set in the 3rd section of the exam below the deadline is important. BPP Practice and Review Kit carries 10 marks and 15-mark questions across all areas of the curriculum. Answer all the components of the question. Even if you can't do all the items you will, however, be capable of signs in the dialogue part. Answer selectively - the review team will expect you to carefully consider what is relevant and significant enough to include in your response. Don't include unnecessary information. Keep an eye out for articles on how the study team will use student accounts to communicate with students. Some OT are less complex than others. Answer them that you are feeling pretty confident about as fast as you can. Go back later to those you find more difficult. This may want to be a way to use time in the exam most effectively and efficiently. Some OT will not contain calculations. Make sure you perceive the wording of the written OT before choosing your answer. There will always be major marks available for simple tasks such as putting simple figures in proformas, such as putting a value figure to add to the capital allowance proforma. Don't miss these simple signs without studying your proformas properly.
