BcScan bare bones like a copy machine. You put the app in the dock and click the icon. It immediately starts a black-and-white scan and opens the scan in the preview. Leave the preview open to add more pages, or close the preview to start a new PDF. The PDF files are on the desktop, and the file size per page is 100k. BcScan requires you to install SANE drivers, which unfortunately come as four different DMGs. I'm sorry that this is the only way to get SANE drivers for mac, but at least I made a choice of version automatically, so you can just each file and will get the correct version. As a reward for your installation efforts, you get support for older scanners and scanning seems to be much faster as well (YMMV) and you won't need to spend 50 bucks or spend time doing preview scans or converting colors and formats.
