However, our file recovery software is also capable of extracting other types of files in different formats. In fact, almost any type of file can be restored, such as: documents, videos, music files, emails, applications, databases and more. Recovery of deleted or lost data from Android devices Last update on 12/11/18 There have been 0 updates in the last 6 months The current version has 0 flags on VirusTotal show reviews Results 1 - 10 of 1128 Prev 1 2 3 4 5 Next Adela D. Louis, Last update: August 26, 2019 You lost photos on your Android device? Is the computer that you use Windows 10? Want to know how to recover these photos or get the best image recovery software. We know what it's like to lose photos from your mobile device, especially if these photos contain memorable moments with friends, families, and special occasions in your life. TIPS: Maybe you're thinking right now if there's a way how you can get those photos back using the only computer that you have, which is a Windows 10 computer. The answer to all your questions is right in front of you. We assure you that you can use this best photo recovery tool in recovering these lost photos from your Android device and will be compatible to install on your Windows 10 computer. Part 1. Did you know the free photo recovery software for Windows 10Video Guide: What is the best photo recovery software for AndroidPart 2. What's good to know. Conclusion Photo Recovery Software for Windows 10 Part 1. Did you know the free photo recovery software for Windows 10 FoneDog Android Data Recovery Tool is a software that can work on both your Android device and Windows 10 computer. This one amazing program is really a generic performer as it is compatible with almost all Android devices such as HTC, LG, Samsung, Sony and more. It can also work with another version of the Windows computer like the one you have at your fingertips, which is Windows 10. It can recover all deleted photos from your Android device and automatically store them on your computer. It is very safe and effective to use because it will certainly give you the highest level of success possible. For starters, there is Android Data Recovery Tool, which is a free photo recovery software for Windows 10, and let's start getting your photos back. Step 1: Running and connecting there is the FoneDog Android Data Recovery Tool, which is also the best photo recovery software to run on your Windows 10 computer and connect your Android device and then wait until the program recognizes your device. Step 2: Turn USB debugging on Android Device After connecting your Android device, it will ask you to turn on the USB debugging. Usb. you don't open the USB debugging, the program will automatically ask you to do so. Here are three different ways how you could open a USB debugging depending on the version of the Android mobile device you're using. Android 2.3 or earlier VersionSettings zgt; app zgt; development zgt; then tap USB DebuggingAndroid 3.0 - 4.1 VersionSettings zgt; Options developer's USB DebuggingAndroid 4.2 to the new VersionSettings qgt; The developer's options for the USB DebuggingAndroid 4.2 to the new VersionSettings zgt; click on the phone's build numbers for several times until a pop-up message that says: You are now in developer mode appearing to zgt; enter Settings once again qgt; THE options of the developer's USB Debugging Note: This mode will simply allow your Android device to connect to your Computer. Once you've done this procedure by incorporating USB debugging on your Android device just tap the OK button on your Windows 10 screen and also click OK on your Android device. Step 3: Select a gallery for the FoneDog Android Data Recovery Tool type, and will now be able to display all types of data files it supports. From the list, simply select the Gallery and Image Library, and then click next, and the program will start scanning for your data to be recovered. With this, please make sure that your Android device's battery life is over 20% and make sure not to disable your Android device from your Windows 10 computer. Step 4: Give FoneDog Privilege Android Device Once you have chosen the type of file you want to recover, FoneDog Android Data Recovery Tool will ask permission from you in order to have full access to your Android device. In order to provide access, go to the Android device and then click Allow or Grant or Authorize and program, then will begin extracting your Android device for lost or deleted photos. If ever you've seen a pop-up on your Android device, just go ahead and tap Retry from the Windows 10 computer screen. Step 5: Restore all photos after FoneDog Android Data Recovery Tool has successfully extracted all your deleted photos from your Android device, now you'll be able to see them on the screen. Both existing and deleted photos will be shown at the same time. If you only want to see deleted photos, you can simply turn on the option only to display the remote element/s found at the top of the screen. This can save you more time when selecting all the photos you want to recover. Set aside all the photos you want to get back, and once you're done, click the Recovery button. All restored photos will be stored directly on the Windows10. Read also: How to Recover Lost Contacts with Android How to View Free Text Messages for Free Text Message on Android Free Download Video Guide: What is the best photo recovery software for Android Part 2. What's good to know with the FoneDog Android data recovery tool will have an automatic automatic stored on your Windows 10 computer, so that all the data that the program recovers will go directly to this designated folder. Also, if you're asking how long it's time for you to recover lost or deleted photos from your Android device, then the answer is that all this data will just always be stored on your Android device. All the lost data is still there until it is overwritten. For you to avoid rewriting the data, stop using the Android device once you find out you've lost some data on your Android device, but instead, there's a FoneDog Android Data Recovery Tool and works. Part 3. Conclusion FoneDog Android Data Recovery Tool certainly does its job in restoring deleted photos from your Android device to your Windows 10 computer. This program doesn't really only recover lost or deleted photos, but it can also recover all your lost or deleted contacts, text messages, call logs, videos, WhatsApp, memos, voice messages, music and more. This program can also work not only on your Windows 10 computer, but also with the Mac and another version of Windows. This one great data recovery tool can certainly give you the highest success rate in recovering all lost or deleted data. Accidentally deleted some important data or files on your phone? It is unfortunate, but do not be sad and do not give hope, because there is still a chance to restore them.
