Learn how to use Access in this free tutorial. In this tutorial, you will learn what a database is, what it is used for, and how to perform simple database tasks.If you want to add or delete records. This walkthrough also provides a basic tour of the various parts of an Access database: tables, forms, reports, and queries. This walkthrough shows you how to create and modify the main database objects for tables, forms, queries, and reports. It also describes basic database management tasks, such as deleting and renaming database objects, and how to repair and compress databases. Access provides search, sort, and filter commands that allow you to track and organize information in a table into recorded times. In this tutorial, you will learn how to use these commands. In this walkthrough, you will learn every thing you need to know about tables and fields, including how to link related tables, create indexes to improve performance, and create key fields that uniquely identify each record in a table. It also describes how to change the properties and settings of fields in a table, such as how to format them and the types of information that can be stored. This walkthrough shows you how to link tables from an existing database in a one-to-many relationship to create a relational database. You will also learn how to apply referential integrity between these tables to ensure that records in related fields are kept valid and accurate. In this tutorial, you'll learn how to take advantage of the capabilities of queries. First, you'll learn about different types of queries, including simple select queries, parameter queries for details, crosstab queries that aggregate records in a descriptive format, and action queries that actually modify records in a database. In this tutorial, I'll explain what I wanted to know about forms and some things I didn't want to know. This tutorial describes all the ins and outs of creating and working with reports: Formatting Options. Sorting and grouping options. Join data from a linked table. This walkthrough shows you how to format forms and reports to make them more visually attractive and readable. Describes how to change the appearance, size, and color of the font, and how to position the text in the control. This walkthrough also shows you how to add pictures and graphics to a form or report. A macro is a set of actions that perform a specific action, such as opening a form or printing a report. Macros can help automate common tasks. For example, you can run a macro that prints a report when the user clicks a command button. In this walkthrough, you will learn how to use Access in other programs, import and export databases in other file formats, import objects from another database, and link to objects in another database, based on Access queries. Describes how to create a worksheet.to create a table that accesses Word, or create a mail merge letter with Word.
