Find common problems, such as the wrong type of security, poor signal coverage, or the wrong channel. Sort or filter by any setting, then drill into any AP to set its authorization level and see more information, including the number of connected customers, supported tariffs, 802.11n/ac/ax capabilities and more. From the AP details page, drill into a list of connected customers, or the channel on which the AP works to verify any use of the channel or shared channel interference problem. From here, you can also use the locator tool to find the AP, establish access control status (ACL), or you can capture the package. Capture. netscout aircheck g2 user manual
