The best way for students to properly assimilate the theoretical part of any subject is exercise and practice. In this sense, and for working on the topic of physics and chemistry, we have compiled several web pages with experiments for students of different educational levels. 1 Physics Experiments over fifty experiments are in this blog developed as a guide to activity. It includes both goals and a list of necessary materials and each of the steps we need to take to develop the experiment. In addition, in most cases, there is also a perfectly illustrative step-by-step video of what we need to do. 2Science Kids with almost 50 experiments are the ones that are on this site, which despite being written in English has a number of instructions very easy to follow for physics and chemistry experiments as well as other activities. Simple and ideal suggestions for teachers to start in elementary classes to demonstrate certain scientific concepts such as density, temperature or air.3Experiintments of chemistry for children focused on primary and secondary, on this site we will find dozens of chemical experiments easy to perform both in the classroom and at home, always under adult supervision. Classified according to topics (home, fun, scientific, physics or chemistry, etc.) and with many labels to achieve the most appropriate for our interests. 4Experiments are easy to both scientifically cut and focus on performances in scientific classes, as well as other home or even magic tricks and crafts, with which we are sure to attract the attention of our audience. They also include some ideas that have been implemented at children's fairs and science competitions, and which may lead to new projects to show in the classroom. Each experiment brings with it an explanation of what is going on in it, which is ideal for understanding all the basics that set it in motion. 5Big DIY Ideas are protected according to the DIY philosophy (do-it-yourself) this English site collects a total of 40 ideas of physics and chemistry projects and experiments with a scientific basis and are closely related to the world of physics and chemistry. Many of the offers can be made on children's courses as simple crafts, while other complete projects for elementary or even high school. 6Fq: Home experiments in physics and chemistry with a base of more than 300 experiments and presence on YouTube, Manuel Diaz, Professor of Physics and Chemistry at the College of the Sacred Heart in Seville), created this site in October 2007. In it you can read the experiments that led to With your students, aspects to consider to perform home experiments in the classroom, how to approach the science school project ... 7Fisquiweb the origin of this space is related to the Department of Physics and Chemistry IES Huang A. Suanzes and in it we discover notes, lab area and videos with practice that help to understand some of the concepts that are being studied in a more interesting way. 8Experiments. What falls faster than a sheet of paper or coin that's in ink?, a thread that breaks in two places, or does the wind affect the temperature that marks the thermometer that is outside? some of the suggestions you'll find. While some are focused on providing a scientific and focused response to each of these situations, others also point out the materials needed to implement them and the procedures to put them into practice.9Experiments in primary and children's education Antonio del Salto is a teacher at the Mediterranean College of Melilla and in his blog offers a wide range of video experiments he conducted with his students : energy properties, density check, photosynthesis... In this space it also offers applications for science, information about the scientific method ... 10Madrí'd Aimed at ESO 4th and Undergraduate students, this site includes a section called Seminar Physics and Chemistry (many of them bear the signature of teachers). For example, physics offers activities focused on the following areas: mechanics, energy, optics, relativity, astronomy and electromagnetism. For its part, Cuimika invites to work on the topic of matter and reaction.11 Major operations in the chemistry laboratory this site, whose authors are professors of the University of Barcelona seeks to promote what are the most common operations in the laboratory, as well as its capabilities and optimization, and in some cases, new trends in the way of work. The 12 lab experiments focus on high school and undergraduate students, and in addition to offering teachers a wide list of experiments to perform in the classroom also represents others that students can perform at home because they do not need specific material or teacher supervision (e.g., they may study the natural form of fluids or effects of air pressure). Already in the classroom, some of these experiments are related to organic chemistry, kinematic energy, dynamics... 13 Salvador Hurtado Virtual Laboratory he is Professor of Physics and Chemistry at IES Aguilar and Cano de Estepa (Seville) and author of this site. In it, he publishes physical and chemical exercises and experiments for different levels in which he identifies the goals and activities that students will conduct. 14Curiosikid, online experiments Is a site aimed at students of 3rd and 4th grade, and to it were included various experiments that students can perform with a computer screen: some of them are related to the Earth, others in the air, there are focused on the various physical and natural phenomena that surround us ... Before performing the desired experiment, you can consult with the introduction with the necessary materials, explanation of the experiment and its application in real life. 15Thing Physics and Chemistry fun blog by the Department of Physics and Chemistry IES Antonio Ma Calero de Pozoblanco (Cordova) has a plethora of videos about the experiments they conducted in class. In order to publicize the events he is holding at Andalusia Science Week, he has published more than 230 educational videos lasting about five minutes under the title Funny Physics, which show the experience for children and adolescents. 16Experiments in primary and children's education Antonio del Salto is a lecturer at the Mediterranean College of Melilla and in his blog offers a wide range of video experiments that he conducted with his students: energy properties, density testing, photosynthesis ... In this space it also offers applications for science, information about the scientific method. God loves you and has a plan for your life. For God loved the world so much that he gave his only born Son that those who believe in him may not perish, but have eternal life. (John 3:16) Man is PECADOR and is separated from God. There is a solution: Jesus Christ is God's only solution to man's sin. HAVE Jesus as a SAVIOR and the Lord. What you have to do is say out loud: Lord, Jesus, I confess that I am a sinner. Oh, my God, my heart is beating. Forgive me for my sins. I'm changing my life for your life. God, God, I proclaim that you will always be my savior. Love! Copyright, Light Science, Telephone: 2790708 - 73003976 - La Paz - Bolivia Copyright, Light Science, - Whatsapp: No 591 73003976 Category: Physics This home experiment consists of making ovens using recycling material such as aluminum cans that are thrown away when drinking a drink and can be prepared by high school students, but always with adult supervision. You can watch the video below for more information. Materials 2 cans of aluminum 1 hammer 2 nails 1 scissors Density is the weight of one body per unit of volume. This is the result of dividing mass by volume, as indicated in the following image: To demonstrate the density of liquids, I share this cute home experiment that will serve to develop research opportunities in students. This experiment aims to demonstrate ... Thermometers are tools that are used to measure temperature and usually those that contain colored alcohol or liquid called mercury inside that expands or contracts with temperature changes and on the market there are many types of thermometers such as: environmental thermometer, clinical thermometer, infrared thermometer, digital thermometer, laboratory thermometer, etc... We must all use natural resources and energy in a sustainable manner as a way to conserve the environment and reduce carbon dioxide emissions into the main atmosphere, causing global warming and climate change. As part of this experiment, students are expected to determine the effects of heat transfer that ... All objects are made up of molecules and atoms, and they are made up of electrical charges that can be positive (protons) or negative (electrons). When an element has the same number of electrons and protons, we say that its electrical charge is neutral. When we friction two elements, such as a balloon with a woolen cloth or with hair, the electrons of one element go to the other. ... The gaseous state is the third state of the aggregation of matter, which under certain pressure and temperature conditions its molecules interact with the force with each other, without forming molecular bonds, taking the shape and volume of the vessel containing it and tending to separate or expand in the event of an increase in its energy... A person is characterized by his curiosity, which constantly leads him to solve problems or face situations around him. As a result, more and more precise ideas have been achieved and scientific knowledge has been achieved. To obtain this knowledge, it is followed in an orderly manner and logical reasoning is used to obtain truthful conclusions and explanations ... Overcooling involves cooling the liquid below the melting point, without hardening it. If in our case the water is gradually cooled and has no impurities, its temperature can fall below 0oC, that is, melting temperatures (for example, bring water to a temperature of -1oC to -4oC). android sqLite multiple tables foreign key. android sqLite multiple tables in one database. android sqLite multiple tables best practices. android sqLite multiple tables foreign key example. android sqLite join multiple tables example. android sqLite query multiple tables. android sqLite insert multiple tables. android sqLite content provider multiple tables
