Screenshot: ProdigyMy son came home from school one day a few months ago asking if he could play another new video game a friend told him about. But it turns out that this game, called Prodigy, is both a really funny monster, fighting, research game, and a game of mathematical skills. Prodigy is a fantasy-style game that is a kind of cross between Pokemon and Minecraft creative mode, with some mathematical equations thrown in to make money to set up your home, buy pets or earn prizes, they have to defeat the monsters. To defeat the monsters, they have to answer the math questions correctly to earn spells. The questions, which Prodigy says coincide with state-level 1-8 classes, including Common Core and TEKS, are tailored to each child's strengths and weaknesses: Prodigy determines your child's skill level through a placement test, giving your child more complex or easy questions when they play to find out where they stand. The placement test starts immediately and runs in the background as you play. It starts in one class below the class that you or your child chose when setting up your account and then works up to determine your child's actual level of class. After the test is over, the difficulty level continues to adapt by revising the preliminary requirements or jumping forward depending on how your child performs. This is my son's house, which you may notice is basically just a large room with a bed for each of his friends so they can sleep. Plus a bookshelf, because every house needs a bookshelf. Screenshot: ProdigyMy's son, who is 9 years old, is now most interested in helping some creatures called Floatings rebuild their home, which was destroyed by a puppet master. I don't know there's much going on in this game: battles, rescues, gems, mythical creatures, shopping, decorating and traveling to other worlds. It often sounds like a different language to me, but I can tell by the excited way he talks about the game that he's into it all. As for being able to communicate with other users on the Internet, which is always one of my main problems, Prodigy has the ability to exchange messages, but it's pretty blocked: Although the chat and friends list can't be disabled, your students can always play offline mode where all social elements are disabled and the game is populated by computer players. It's always from the worlds selection screen after logging in. Only pre-determined offers that were deemed safe were added to the game. Users can't print or send whatever they want. This was put in place for privacy and security reasons for students/children. No personal or inappropriate language can be hired and seen by any other user. About 93% of American adults have some degree of mathematical anxiety. I recognize that I am part of this group.... MoreKids is free to read, but some features and options will not be available as part of the basic membership. So if they like the game, keep in mind that they'll pretty quickly want to switch to premium memberships for extra bells and whistles (priced at \$4.99 per month for the year, \$7.95 per month for a six-month membership or \$8.95 on a regular month-to-month plan). We started with a free membership and I was tracking how much it actually played for about a month. Prodigy provides weekly summaries of how much they play, what math skills they practiced and how experienced they were in different categories. As soon as I was sure my son was sticking to it, I upgraded him to a monthly membership. Now that he's had it and used it for months (he actually spends more time in the game now that the extras are unlocked), I can upgrade it to a six-month or annual plan. My son mostly likes to play the web version of Prodigy on his Chromebook, but he's also available as an app on iOS and Android. When I asked him if he recommended it for other kids, he said he definitely does because it teaches kids to do math and it's awesome. Meet the smartest parents on Earth! Join our parent Facebook group. A single mention of mathematics is enough to strike fear into the hearts of adults all over the world. For thousands of people, the thought of making annual tax returns by applying for a mortgage, or even just helping kids with their homework can lead them to a cold sweat and leave them running on the nearest calculator. Fortunately there are phone apps to help adults get better at math. The long-term solution, however, is to engage children with math from the start, using tools, cool math games and applications that make the process of learning arithmetic interesting rather than difficult. So to help parents and kids alike, here are the best cool math games for kids. 1. BBC School Radio--Maths (Age 3-11) The BBC has always produced a wide range of high quality educational materials on a wide range of topics for both adults and children. And his language services are particularly well known. The BBC School Radio series covers most of the subjects children face in primary school, including maths. There are five fun math games for kids available: Counting Songs (age 3-5), Numbertime (age 5-7), Megamaths (age 7-9), Maths Challenge (age 9-11), Mathematics Challenge 1 (age 9-11), and Maths Challenge 2 Each series has an emphasis on engagement and confidence building rather than long, tightening lectures. Children are rewarded with symbolic achievements and great praise as they progress. Each game can also be downloaded podcast, so your child won't be stuck in front of the computer while they play games--which makes them ideal for long car trips or flights. 2. Grand Prix Multiplication (Age 8-9) Grand Prix Multiply is just one of hundreds of cool math games available on the math playground. Math Playground divides its games into six categories: Add and subtract, multiply and divide, fractions, shapes and graphics, pre-algebra, and money and time. All games are very interactive and offer some form of competition with other players. Each game even has leaders if your kids enjoy that sense of accomplishment. As a teacher, you will also be able to see information about how each game connects to the curriculum for the associated level. (NB: Not all math Playground games are free to play.) 3. Prodigy Math (Age 6-14) Prodigy Math offers curriculums aligned with math games and other content for children between first and eighth grade. It is free to make an account as a student and parent. As a parent, a free account lets you see how many questions your child has answered, the level of class they perform at, and the areas where they need to improve. You can also set training goals and offer rewards, as well as access a number of reports and performance data. Premium membership opens up more games. It costs \$4.99 per month per child. 4. Underwater counting (Age 2-5) This tablet-friendly game is as simple as it sounds--wheek's way to help very young children become comfortable using numbers 1-10. It has two levels of difficulty that can be used to match a child's existing abilities, and it is designed to help them recognize and use the numbers correctly. The game is based on treasure hunt; As the children correctly answer the questions on the screen the scuba diver gets closer to discovering the hidden gold. Children must answer 10 questions correctly to complete the game. 5. Khan Academy Kids (Age 2-7) Khan Academy Kids is a free app available in Google Play, Apple App Store and Amazon Appstore. The program doesn't just cover mathematics. It was designed to teach early literacy, reading, writing, language and mathematics while encouraging creativity and social skills creation. It also offers many tools for teachers and parents, allowing them to monitor the child's progress. Make sure you also check out Khan Academy's early math YouTube channel. Video lectures will help provide a theoretical backdrop for concepts children learn in online math games. 6. One Step Equation (Age 10-14) Algebra may be the child's biggest mathematical fear, but this basketball-themed game hopes to make it more interesting than just looking at the board all over The player must answer the question of algebra, which then gives them a chance to make a basket. You'll hit the moving moving Catch it, and if successful, your player will dunk it. The questions progress in difficulty as the game progresses. One Step Equation supports two players so that your kids can practice against their siblings, or you can even participate on your own to freshen up some of these long-forgotten formulas! 7. Mathventure (Age 5-16) Mathventure is one of the many fun math games for children on the Coolmath Games website. This particular game requires you to solve equations as you move around a giant mathematical universe. If you dig a little deeper on the site, you'll find a large number of games covering everything from basic arithmetic to Sudoku. Games are divided into strategies, skills, numbers and trivia. Coolmath Games also has educational games in other categories including science, history, geography and word games. 8. Number Puzzle Decimals (Age 10-12) Another game from the math playground, the Number Decimals puzzle requires players to build a tower of answers using fractions and decimal points. The answer of each block is the sum of two numbers directly below it. The game develops the player's skills in adding and subtracting fractions and working with different numbers and denominators. Again, the difficulty increases as players move up the levels. 9. Mathematical Games (Age 3-14) Mathematical Games hosts a number of fun math puzzles for children between pre-kindergarten and eighth grade. In total, more than 1000 games are available on the platform. Unlike many of these cool math games, you can view games by skill. Listed more than 20 skills, including geometry, ratios, valuation, money and more. Some of the games require premium memberships to be able to play. You can pick up a subscription for as little as \$3.75 a month if you pay annually. (NB: You will need to temporarily turn flash to play games.) 10. 3D shaped Ice Cream Attack (Age 4-6) 3D Forms Ice Cream Attack Geometry is a game that teaches kids to identify 3D shapes and prevent the sun from melting their ice cream. It is part of the Education.com gaming platform. It offers cool math games for children between preschool and fifth grade. All games come with accompanying lesson guides that expand the interactive learning element. You'll also find coding games, reading and writing games, and typing games available for free. You have to make an account to be able to play. Get more help with your math skills If you want to brush up on your own math skills, we have you covered by some fantastic online resources. Why not start by downloading some printed math sheets so you can practice? And if you're still not sure enough to do Without help, you can always use Bing to solve complex mathematical equations.
