Financial Management – Sunsystems intelligently combines the functions of general, sales, acquisition, project, and user-defined ledger system. This makes the full impact of any financial posting immediately visible and provides organizations with an open and realtime view of their business. Fixed asset registration - allows you to manage all aspects of saving, depreciation methods are available. Using separate depreciation methods and currencies, SunSystems can value and deprecipher assets while maintaining separate book value and asset life figures, in accordance with local and corporate requirements. Enterprise Allocations – This SunSystems module was originally developed to facilitate the cost allocation requirements of joint venture oil research and drilling projects. Related costs can then be exported to the accounting systems of each joint venture partner. Today, the most common cost centers are used for advanced cost/expense allocations between departments, projects, other analysis codes, accounting periods, transaction status codes, ledgers, budgets, and cross-company posting routines. Allocation can be based on the fixed amount, fixed percentage, or rates described by any set of statistical or financial data held within the system. Sales process from sales quote to sales invoicingSales can be out-of-stock or inventory items. And certain items can be restricted to designated customers, linked to price books, and linked to package sales contracts. The system can even be used to create back-to-back purchase Management – allows you to manage the entire purchase-payment process. This includes integration with the general ledger to facilitate budget spending and purchasing commitment auditing. The system can handle purchases of non-inventory items, such as services, capital goods for entry into the Fixed Asset Record, and inventory items that can then be managed through the Inventory Management module. Purchases of specific items may be limited to designated suppliers, linked to price books, and withdrawn against extensive contracts. Inventory counting, inventory location, and inventory cost. Performance management – SunSystems has a range of analytics and reporting applications to support enterprise performance management. This means that budgeting, planning, forecasting and consolidation are simple, even in multiple financial systems. This range of products, which can be produced from business boards, scorecards, and a comprehensive range of other reports, correctly easy by ensuring the availability of real-time critical business information to end users who need it SunSystems Query & amp; Analysis is a powerful, flexible, secure and easy-to-use set of dynamic, multilingual, multicurrency business intelligence tools. They integrate with Microsoft Office, thereby minimizing the user's learning curve, making it easier to create and analyze reports quickly and eliminating the need for technical skills. SunSystems is a very powerful system that is easy to use and implement, especially for the Accommodation industry and service sector, and it is very good to meet 90% of your accounting and management requirements, When applied correctly with real-time analytics, I suggest you go to Microsoft office 2- easy-to-use Report Manager for Infor LN or Infor M3Pros1-Q& A tool if your company is in manufacturing or retail business 3- enterprise allocation is one of the best solutions available for Cost Allocation in Cost Centers within the same company or in many business units. 4- Process Matching & manufacturing or retail business 3- enterprise allocation is one of the best solutions available for Cost Allocation in Cost Centers within the same company or in many business units. 4- Process Matching & manufacturing or retail business 3- enterprise allocation is one of the best solutions available for Cost Allocation in Cost Centers within the same company or in many business units. 4- Process Matching & manufacturing or retail business 3- enterprise allocation is one of the best solutions available for Cost Allocation in Cost Centers within the same company or in many business units. 4- Process Matching & manufacturing or retail business 3- enterprise allocation is one of the best solutions available for Cost Allocation in Cost Centers within the same company or in many business units. 4- Process Matching & manufacturing or retail business 3- enterprise allocation is one of the best solutions available for Cost Allocation in Cost Centers within the same company or in many business units. 4- Process Matching & manufacturing or retail business 3- enterprise allocation is one of the best solutions are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocation in Cost Centers within the same company or in many business are allocati detail down capabilities in any account. 6- Managing all purchase, inventory and sales transactions with general ledger and out-of-box integration. 7- Trans. type 8- Can analyze all kinds of transactions in multiple analysis dimensions for budget control in any transaction 9- Business Rule builder automizes Audit in impact with laws and internal policies for transactions. 10- Multiple ledgers within the same business unit. 11- Security and accessibility features that reach area security and access. 12- The system includes a Designer who helps you design every user experience within the System and also helps you add any external applications, files or connections that need external navigation 13- The system includes a transfer desk that allows the user to receive and transfer data from other systems in different formats, and manages the System entity registry with verification rules that can be changed each time you use itCons1, but it is not available in managing maintenance and asset tracking. 2- Integrations need to be purchased from another platform (Infor ION). 3- Budgeting system can be managed, but planning needs another application. 4- Automatic process matching cannot process partial matching, so amounts must be the same without any difference or tolerance. 5- The user log log operation screen is very difficult to use for the normal user, so they use the Q& A Excel plug-in to connect and facilitate the input process specifically for batches.
